PAAVAI ENGINEERING COLLEGE, NAMAKKAL – 637 018

(AUTONOMOUS)

Affiliated to Anna University Chennai and approved by AICTE, New Delhi.

Accredited by NBA, New Delhi and NAAC with " A " Grade

Value Added Courses

2019-2020

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
UAV AND MAV OPERATIONS-INTRODUCTION

ABOUT THE COURSE:

This course provides hands on experience on design, fabrication and flying of UAV category aircraft. Students will get in-depth skill set on design and fabrication techniques of UAV.

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a drone developers and pilots.

Need for UAV and MAV?

- Drone piloting can be a well-paying profession.
- It is the most popular course for Aeronautical Engineers.
- You have more job choices available to you.

Course Content:

- Introduction to UAVs, History, classifications
- UAV operating principles
- Selection of different UAVs for specific applications
- Design Methodology, parameter selection
- Propulsion systems selection, Material selection

Date: 10.06.2019 to 14.06.2019

Venue:

Aircraft System Lab,
Aeronautical Engineering Block
Paavai Engineering College

Course Incharge

- Mr.G.Sasi AP/Aero,PEC

19AEVC301 UAV AND MAV OPERATIONS-INTRODUCTION

COURSE OBJECTIVES

To enable students to

- be put in for real time development projects
- solving various technical issues in the development

PROGRAMME CONTENT

1. Introduction to UAVs, History, classifications
2. Introduction to UAVs – Evolution and Classification
3. UAV operating principles
4. Selection of different UAVs for specific applications
5. Principal differences between Vehicles
6. Design Methodology, parameter selection
7. Propulsion systems selection, Material selection

TOTAL PERIODS 30

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- bridge the gap between theoretical concepts learned in college and industry practices
- indulge in and complete real time industrial projects

TEXT BOOK & MANUALS

- https://ptgmedia.pearsoncmg.com/images/9780789755988/samplepages/9780789755988.pdf

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
UAV DESIGN

ABOUT THE COURSE:

This course provides hands on experience on design, fabrication and flying of UAV category aircraft. Students will get in-depth skill set on design and fabrication techniques of UAV.

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a drone developers and pilots.

Need for UAV and MAV?

- Drone piloting can be a well-paying profession.
- It is the most popular course for Aeronautical Engineers.
- You have more job choices available to you.

Course Content:

- Introduction to fixed-wing UAV
- Basic Design Parameters.
- Weight and CG Estimation
- Performance and Stability Analysis

Date: 25.11.2019 to 29.11.2019

Venue:

Aircraft System Lab,
Aeronautical Engineering Block
Paavai Engineering College

Course Incharge

- Ms.V.Lakshmi Priya AP/Aero,PEC

19AEVC401 **UAV DESIGN**

COURSE OBJECTIVES

To enable students to

- acquire the knowledge of designing uav
- develop their skill set in drone design

COURSE LAYOUT:

1: Introduction to fixed-wing UAVs ,Introduction to Design, Basic Design Parameters

Module2: Basic Design Parameters, Design Algorithm: Case Study, Design Algorithm: Mission Requirements

Module3: Design Algorithm: Feasible Design Parameters, Configuration Layout: Airfoil Selection, Configuration Layout: Planform Geometry selection

Module4: Weight and CG Estimation, Analytical Parameter Estimation, Analytical Parameter Estimation

Module5: Performance and Stability Analysis, Performance and Stability Analysis ,Performance and Stability Analysis

Module6: Simulation, Simulation, Detailed Sizing.

Module7: Estimation of inertial properties using 3D modeling, Prototype Fabrication.

Module8: Wind Tunnel Testing, Aerodynamic Characterization through Wind Tunnel Testing.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- gain the knowledge about design of UAV
- construct the drone by themself

TEXT BOOK & MANUALS

- https://onlinecourses.nptel.ac.in/noc20_ae04/preview

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
ADVANCED AIRCRAFT MAINTENANCE

ABOUT THE COURSE:

The Aircraft Maintenance is a niche course which deals with the maintenance, upgrade and quality assurance of aircraft. It is also a mix of theory and practice and the students also get ample exposure to the aviation industry

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Passionate to work in the aviation field.

Need for Aircraft Maintenance?

- Having an exploring nature and willingness to learn new things
- It is the most popular course for Engineers.
- The responsible and promising job in the aviation sector

Course Content:

- Introduction, Construction
- Performance, Lubrication system, Induction system
- Fuel system, Ignition System, Starting System
- Propeller, Maintenance
- Introduction, Inlet, Compressor
- Combustion, Turbine, Exhaust
- Fuel system, Lubrication system, Ignition System
- Starting, Thrust Augmentation, Material, Maintenance

Date: 03.06.2019 to 08.06.2019

Venue:

Aircraft Engine Lab,
Aeronautical Engineering Block
Paavai Engineering College

Course Incharge

- Mr. D.RAJ KUMAR ASP/Aero,PEC

19AEVC501 ADVANCED AIRCRAFT MAINTENANCE

COURSE OBJECTIVES

To enable students to

- acquire the knowledge of their relevant Advanced Aircraft Maintenance course
- develop their practical skills in maintenance

COURSE LAYOUT:

Module1: Introduction, Construction

Module2: Performance, Lubrication system, Induction system

Module3: Fuel system, Ignition System, Starting System

Module4: Propeller, Maintenance

Module5: Introduction, Inlet, Compressor

Module6: Combustion, Turbine, Exhaust

Module7: Fuel system, Lubrication system, Ignition System

Module8: Starting, Thrust Augmentation, Material, Maintenance

TOTAL PERIODS 30

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- gain the knowledge about Maintenance domain
- bridge the gap between theoretical concepts learned in college and industry practices

TEXT BOOK & MANUALS

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
COMPUTER AIDED DESIGN CATIA-INTERMEDIATE

ABOUT THE COURSE:

CATIA is an acronym for Computer Aided Three-dimensional Interactive Application. It is one of the leading 3D software used by organizations in multiple industries ranging from aerospace, automobile to consumer products..

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why CATIA?

- The CATIA suite is a powerful design tool that is growing in popularity due to the powerful functionality it offers
- It is the most popular solid modeller,
- You have more job choices available to you internationally.

Course Content:

- Introduction to
  - PART MODELING
  - ASSEMBLY DESIGN

Date: 25.11.2019 to 29.11.2019

Venue:

Software lab,

Core Engineering Block

Paavai Engineering college

Course Incharge

- Mr.P.Karthikeyan AP/Aero.PEC

19AEVC601 COMPUTER AIDED DESIGN CATIA-INTERMEDIATE

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling
- develop the analysis process of mechanical components.

PART MODELING

Sketch based features-Pad, Multipad, Drafted filleted pad-Pocket, Multipocket, Drafted filleted pocket-Shafts, groove-Holes-Rib, Slots-Solid combine, Stiffner-Multi section solid, Multi section solid removal-Edit Geometry, Parent child relationship, -Drafts, Drafted reflected line, Variable angle draft-Shell feature, Affinity-Reference elements- Point, Axis, Planes,-Boolean operations- Assemble, Add, Remove, Intersect, Union trim, Remove lump

ASSEMBLY DESIGN

Introduction on assembly-Assembly approaches-Top down assembly, Bottom up assembly-Product structure tools-Component, Product, Part-Existing component, Existing component with positioning-Replace component, -Assembly constrains-Coincident, Contact constrain, Offset, Angular, parallel, Perpendicular, Fix-Fix together, Quick constrain, Change constrain, Reuse pattern-Assembly Features-Split, Hole, Pocket, Add, Remove-Symmetry in assembly

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

TEXT BOOK & MANUALS

- Jonathan M. Weaver, Nader G. Zamani CATIA V5 Tutorials Mechanism Design & Animation Release 20

PAAVAI ENGINEERING COLLEGE

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
UAV AND MAV OPERATIONS-ADVANCED

ABOUT THE COURSE:

This course provides hands on experience on design, fabrication and flying of UAV category aircraft. Students will get in-depth skill set on design and fabrication techniques of UAV.

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a drone developers and pilots.

Need for UAV and MAV?

- Drone piloting can be a well-paying profession.
- It is the most popular course for Aeronautical Engineers.
- You have more job choices available to you.

Course Content:

1. Introduction to Avionics and navigation systems, Autopilot system
2. Introduction to Electro optical payload and other sensor payloads
3. Electro optical payload and other sensor payloads
4. Fabrication Techniques
5. Flight Trails and error rectification
6. Advanced real time applications of UAVs
7. R&D Projects

Date: 03.06.2019 to 08.06.2019

Venue:

Aircraft System Lab,
Aeronautical Engineering Block
Paavai Engineering College

Course Incharge

- Ms.V.Lakshmi Priya AP/Aero,PEC

19AEVC701 UAV AND MAV OPERATIONS-ADVANCED

COURSE OBJECTIVES

To enable students to

- be put in for real time development projects
- solving various technical issues in the development

PROGRAMME CONTENT

1. Introduction to Avionics and navigation systems, Autopilot system
2. Introduction to Electro optical payload and other sensor payloads
3. Electro optical payload and other sensor payloads
4. Fabrication Techniques
5. Flight Trails and error rectification
6. Advanced real time applications of UAVs
7. R&D Projects

TOTAL PERIODS 30

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
COMPUTER AIDED DESIGN AUTOCAD-INTERMEDIATE

ABOUT THE COURSE:

AutoCAD is a commercial computer-aided design (CAD) and drafting software application used by organizations in multiple industries ranging from aerospace, automobile to consumer products..

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why AUTOCAD?

- Easier to Read
- Simplified Sharing
- Documenting the Design
- Designing Physical Objects in a Virtual Workspace.

Course Content:

- Introduction to
  - Working Effectively with AutoCAD
  - Advanced Layouts

Date: 25.11.2019 to 29.11.2019

Venue:

Software lab,

Core Engineering Block

Paavai Engineering college

Course Incharge

- Ms.R.P.VijayaGanesh AP/Aero,PEC

19AEVC801 COMPUTER AIDED DESIGN AUTOCAD-INTERMEDIATE

COURSE OBJECTIVES

To enable the students

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling
- understand the analysis of mechanical components

1..Working Effectively with AutoCAD

o Setting up the Interface

o Using the Keyboard Effectively

o Working in Multiple Drawings

o Using Grips Effectively

o Additional Layer Tools

2.Advanced Layouts

o Creating and Using Named Views

o Creating Additional Viewports

o Layer Overrides in Viewports

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of the course students will be able to

- Inspect and evaluate the surface imperfections using penetrant testing method.
- Inspect subsurface defects by magnetic particle.

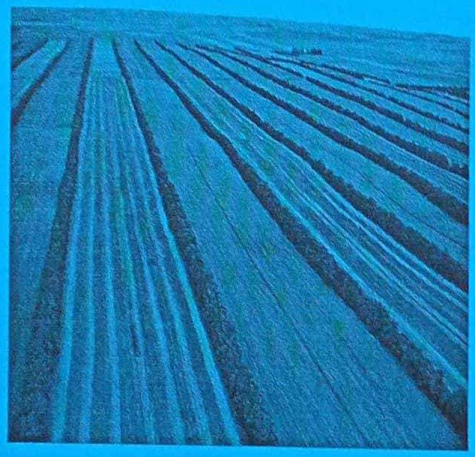
PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

19AIVC301 INTRODUCTORY AGROFORESTRY



Course Content:

- Agro forestry, status of Indian forest, agro forestry system
- Agri-silvi culture, alley cropping, planning for agro forestry
- Agro forestry projects, nursery and planting

Date: 10.6.2019-14.6.2019
Venue: T415

COURSE INCHARGE

1. Dr.A.Vivekanandhini, HOD/AGRI
2. P.Arthiya, AP/AGRI

19AIVC301 INTRODUCTORY AGROFORESTRY

COURSE OBJECTIVES

To enable the students to

- To learn distinction between agroforestry and social forestry
- To learn the election of tree crop species for agro-forestry.
- To understand about Agroforestry projects

Unit I

Agroforestry – definition, objectives and potential. Distinction between agroforestry and social forestry. Status of Indian forests and role in India farming systems. Agroforestry system, sub-system and practice:

Unit II

Agri-silviculture, silvipastoral, horti-silviculture, hortisilvipastoral, shifting cultivation, taungya, home gardens, alley cropping, intercropping, wind breaks, shelterbelts and energy plantations. Planning for agroforestry – constraints, diagnosis and design methodology, selection of tree crop species for agro-forestry.

Unit III

Agroforestry projects – national, overseas, MPTS –· their management practices, economics of cultivation – nursery and planting (Acacia catechu, Dalbergiasissoo, Tectona, Populus, Morus, Grewia, Eucalyptus, Quercus spp. and bamboo, tamarind, neem etc.), Neem Azadirachta indica, Tamarind (Tamarindus indica) and melia dubia as per local prevalence

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze MPTS – their management practices
- Demonstrate the nursery and planting
- Understand about melia dubia as per local prevalence

TEXT BOOKS

1. A. K. Patra, 2013. Agroforestry – Principles and Practices. New India publishing agency.

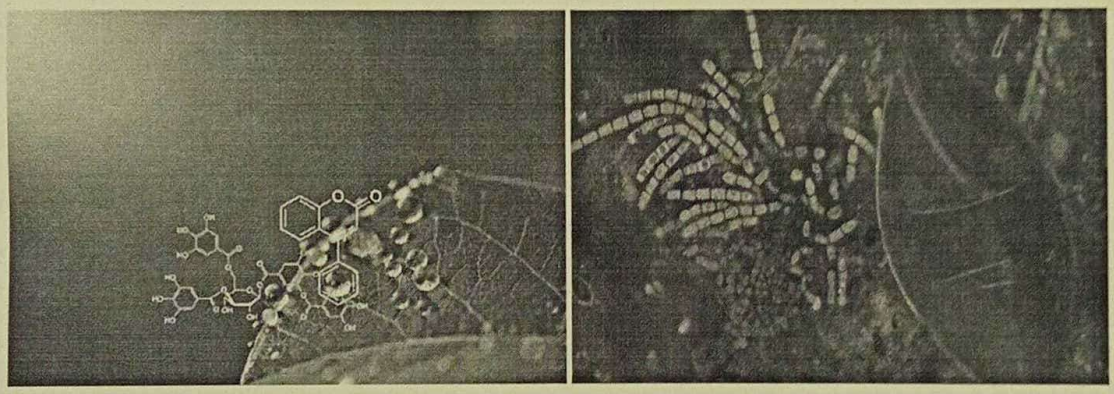
PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

19AIVC401 ELEMENTARY PLANT BIOCHEMISTRY



Course Content:

- Carbohydrates, Isomerism, Optical activity, Essential fatty Acids
- Physical and chemical control of Oils, Properties Of amino acids
- Enzymes, Classification and mechanism of action, bioenergetics.

Date: 25.11.2019-29.11.2019
Venue: T415

COURSE INCHARGE

1. Dr.A.Vivekanandhini, HOD/AGRI
2. S.Nithya, AP/AGRI

19AIVC401 ELEMENTARY PLANT BIOCHEMISTRY

COURSE OBJECTIVES

To enable the students to

- To learn about classification of carbohydrates
- To understand the plant pigment structure and function
- To learn about plant enzyme and TCA cycle.

Unit I

Carbohydrates: Occurrence classification and structure, physical and chemical properties of carbohydrates, isomerism, optical activity, reducing property, reaction with acids and alkalis, ozone formation. Lipids: Classification, important fatty acids and triglycerides, essential fatty acids

Unit II

Physical and chemical control of oils, their rancidity, phospholipids, types and importance. Plant pigments – structure and function of chlorophyll and carotenoids, sterols, basic structure, role of brassino sterols in plants. Proteins: Classification, function and solubility, amino acids – classification and structure, essential amino acids, properties of amino acids, color reactions, amphoteric nature and isomerism; structure of proteins –primary, secondary tertiary and quaternary properties and reaction of proteins

Unit III

Enzymes: Classification and mechanism of action; factors affecting enzyme action, 48 co-factors and coenzymes. Vitamins and minerals as co-enzymes/co-factors. Carbohydrate metabolism – glycolysis and TCA-cycle; metabolism of lipids, fatty acid oxidation, biosynthesis of fatty acids, electron transport chain, bioenergetics of glucose and fatty acids.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Acquire knowledge in physical and chemical properties of carbohydrate
- Understand the reaction of proteins
- Gain idea about carbohydrate metabolism and glycolsis

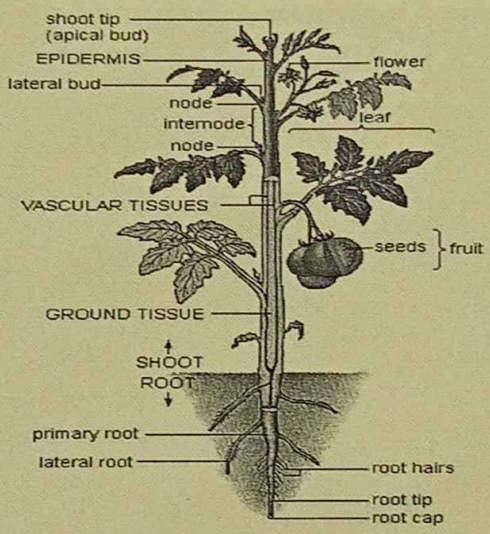
PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

19AIVC501 INTRODUCTORY CROP PHYSIOLOGY



Course Content:

- Water relation in plant, role of water in plant metabolism, osmotic pressure
- Drought, different types of stress.
- Biological nitrogen fixation, photo respiration, secondary metabolites.

Date: 3.6.2019-8.6.2019
Venue: T415

COURSE INCHARGE

1. Dr.A.Vivekanandhini, HOD/AGRI
2. S.Sreedevi, AP/AGRI

19AIVC501 INTRODUCTORY CROP PHYSIOLOGY

COURSE OBJECTIVES

To enable the students to

- To understand the water relations in plant
- To learn about different types of crop stress
- Acquire knowledge in Photosynthesis and CO2 fixation.

Unit I

Water Relations in Plants: Role of water in plant metabolism, osmosis, imbitions, diffusion, water potential and its components, measurement of water potential in plants, absorption of water, mechanism of absorption and ascent of sap. Stomata: Structure, distribution, classification, mechanism of opening and closing of stomata. Osmotic pressure, guttation, stem bleeding; transpiration methods and mechanism and factors affecting transpiration.

UNIT II

Drought: Different types of stresses; water, heat and cold tolerance; mechanism of tolerance. Plant Nutrition: Essentiality, mechanism of absorption and its role in plant metabolism.

UNIT III

Biological Nitrogen Fixation, Photosynthesis, structure and function of chloroplast, dark and light reactions, cyclic and non-cyclic electron transfer, CO2 fixation – C3, C4 and CAM metabolism, advantages of C4 pathway. Photorespiration and its implications, factors affecting photosynthesis. Mode of herbicide action, Secondary metabolites and plant defence.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the mechanism of opening and closing of stomata.
- Analysis the mechanism of drought tolerance
- Acquire knowledge in factors affecting photosynthesis

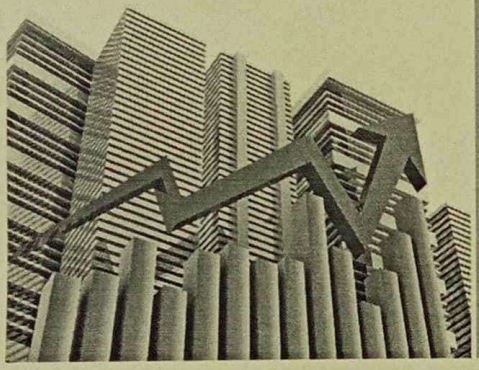
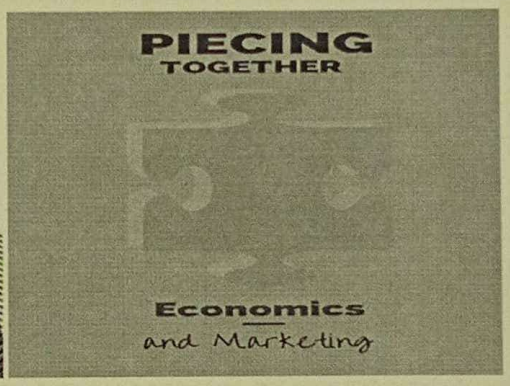
Value Added Course

19AIVC601 ECONOMICS AND MARKETING





Course Content

- Nature and scope of economics ,Consumption, Law of diminishing
- Theory of Demand, Theory Of firm,Theories Of Population
- Marketing, Classification of markets, Constraints in marketing

Date: 25.11.2019-29.11.2019
Venue:T414

COURSE INCHARGE

1. Dr.A.Vivekanandhini, HOD/AGRI
2. P.Athira, AP/AGRI

19AIVC601 **ECONOMICS AND MARKETING**

COURSE OBJECTIVES

To enable the students to

- To understand the nature and scope of economics in agriculture
- Analysis the theory of demand and surplus
- Study the different types of marketing in agriculture /horticulture

Unit I

Nature and scope of economics, definition and concepts, divisions of economics, economic systems, approaches to the study of economics. Consumption – theory of consumer behaviour, laws of consumption, classification of goods. Wants – their characteristics and classification, utility and its measurement, cardinal and ordinal, law of diminishing marginal utility, law of equi-marginal utility, indifference curve and its properties, consumer equilibrium.

Unit II

Theory of demand, demand schedule and curve, market demand. Price, income and cross elasticities, Engel's law of family expenditure – consumer's surplus. Theory of firm, factors of production – land and its characteristics, labour and division of labour, theories of population.

Unit III

Marketing- definition – Marketing Process – Need for marketing – Role of 55 marketing — Marketing functions – Classification of markets – Identification of various marketing channels – Price spread – Marketing Efficiency –Integration – Constraints in marketing of horticultural/agricultural produce. Market intelligence.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analysis law of diminishing marginal utility, law of equi-marginal utility, indifference

- Understand the . Price, income and cross elasticities, Engel's law of family expenditure
- Acquire knowledge in marketing process

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

19AIVC701 HORTI-BUSINESS MANAGEMENT

Course Content:

- Farm management, Production Function , Decision making under risk
- Planning, Forms of Business, Power authority
- Budgeting as a tool for planning, Personnel management, financial Management

Date: 3.6.2019-8.6.2019
Venue: T415

COURSE INCHARGE

1. Dr.A.Vivekanandhini, HOD/AGRI
2. K.Vishnu Bharath, AP/AGRI

19AIVC701 HORTI-BUSINESS MANAGEMENT

COURSE OBJECTIVES

To enable the students to

- To understand about factors and product relationship
- To be familiar with planning ,organizational principles
- To study about Budgeting

UNIT 1

Farm management - definition, nature, characteristics and scope. Farm management principles and decision making, production function, technical relationships, cost concepts, curves and functions – factors, product, relationship – factors relationship, product relationship, optimum conditions, principles of opportunity cost-equi-marginal returns and comparative advantages, time value of money, economic of scale, returns to scale, cost of cultivation and production, break even analysis, decision making under risk and uncertainty. Farming systems and types.

UNIT 2

Planning – meaning, steps and methods of planning, types of plan, characteristics of effective plans. Organizations – forms of business organizations, organizational principles, division of labour. Unity of command, scalar pattern, job design, span of control responsibility, power authority and accountability.

UNIT 3

Budgeting as a tool for planning and control. Record keeping as a tool of control. Management and administration: meaning, definition, principles and functions. Functional areas of management – operations management – physical facilities, implementing the plan, scheduling the work, controlling production in terms of quantity and quality. Materials management – types of inventories, inventory costs, managing the inventories, economic order quantity (EOQ). Personnel management – recruitment, selection and training, job specialization. Marketing management – definitions, planning the marketing programmes, marketing mix and four P's. Financial management – financial statements and ratios, capital budgeting. Bank norms – Insurance.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Study the farm management principles and decision making

- Gain knowledge about forms of business organization
- Analyze the concept of management and administration

TEXT BOOKS

1. Heady Earl O and Herald R. Jenson,1954, Farm Management Economics. Prentice Hall, New Delhi S.S. Johl, J.R. Kapur ,2006, 2.Fundamentals of Farm Business Management. Kalyani Publishers, New Delhi

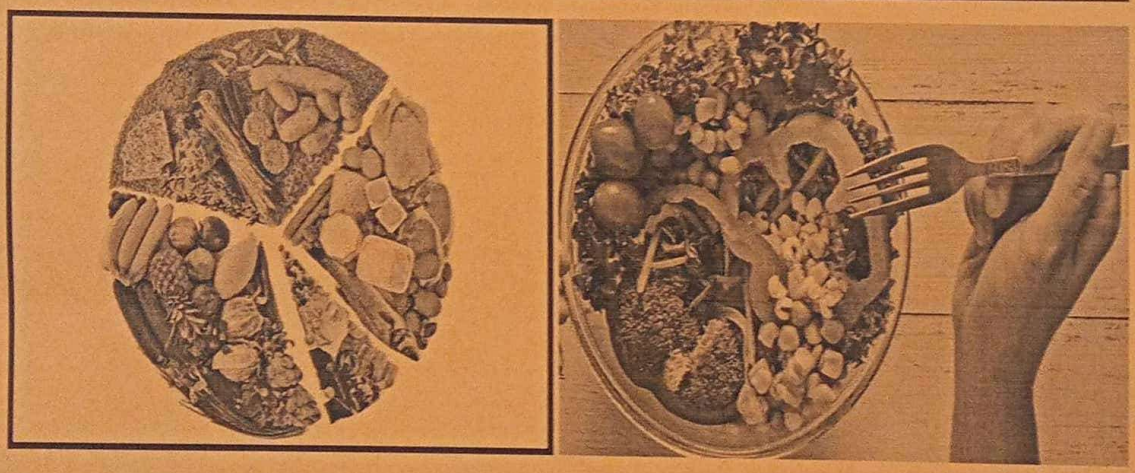
(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

19AIVC801 FUNDAMENTALS OF FOOD AND NUTRITION



Course Content

- Food and Its function, Physical –chemical properties, absorption and utilization.
- Protein, Lipids, Fatty acids.
- Mineral nutrition, Balanced diet, Food Additives.

Date: 25.11.2019-29.11.2019
Venue: T414

COURSE INCHARGE

1. Dr.A.Vivekanandhini, HOD/AGRI
2. V.Balamurugan, AP/AGRI

19AIVC801 FUNDAMENTALS OF FOOD AND NUTRITION

COURSE OBJECTIVES

To enable the students to

- Understand the food and nutrition for good health
- Acquire knowledge valus of protions and lipids
- Study the mineral nutrition ,vitamins function.

Unit I

Food and its function, physico-chemical properties of foods, food preparation techniques.Nutrition, relation of nutrition to good health. Energy: definition, determination of energy requirements, food energy and total energy needs of the body. Carbohydrates: functions, source, requirements, digestion, absorption and utilization.

UNIT II

Protein: functions, sources, requirements, digestion, absorption, essential and non-essential amino acids, quality of proteins, PER/NPR/NPU; supplementary value of proteins and deficiency. Lipids: functions, sources, requirements, digestion, absorption and utilization, saturated and unsaturated fatty acids, deficiency.

UNIT III

Mineral nutrition: macro and micro-minerals, function, utilization, requirements, sources, effects of deficiency. Vitamins (of water soluble and fatsoluble vitamins): functions, sources, effects of deficiency, requirements. Balanced diet: recommended dietary allowances for various age groups, common disorders associated due to malnutrition in population. Food Additives, adulterants and contaminants.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Gain knowledge food energy and total energy needs of the body.
- Understand the supplementary value of proteins and deficiency
- Analyze the disorders associated due to malnutrition in population.

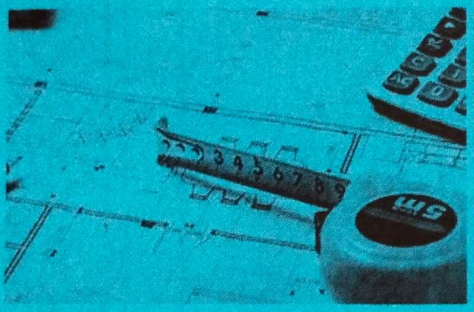
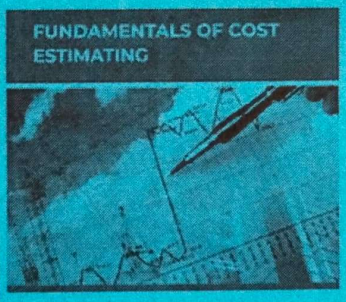
NAMAKKAL -637 018

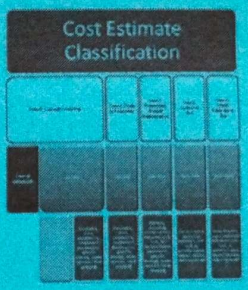
DEPARTMENT OF CIVIL ENGINEERING

Value Added Course

19CEVC301 - COST ESTIMATION IN CONSTRUCTION







- This course introduces the types of cost estimation from the conceptual design phase through the more detailed design phase of a construction project. In addition, the course highlights the importance of controlling costs and how to monitor project cash flow.
- This course covers the topics such as Preparation data required to estimate items, Extract equipment's rates and labor wages from finance data, Negotiate prices with suppliers and sub-contractors, Normalization and describe items and packages breakdown Based on historical data and experience, Build your site observations, productivity, material wastage and cost data base.

Date : 10.6.2019 to 14.6.2019

Venue: T229

Course Incharge:

1. Mrs.J.Umanambi HOD/Civil
2. Mr.B.Thiyagarajan AP/Civil

19CEVC301 **COST ESTIMATION IN CONSTRUCTION**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on building Estimation
- understand the concepts of preparation of BOQ
- learn the measurement procedures for buildings

Module I

Introduction to building cost estimation- Measurement procedures - Mensuration – Specifications- Rates – Labour, material, machine.

Module II

Finding quantities from construction drawing –Excavation - Ground work and Foundation - Superstructure- Walls, partitions, floors, roofs- Internal finishes - Doors and windows - Staircases

Module III

General approach to measurements of building services - External work- Bill of quantities – Abstract and BOQ

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply knowledge on calculation of building cost
- prepare BOQ and Abstract
- calculate quantities in building

TEXT BOOKS

1. Estimation and Costing book by M. Chakraborti ,M. Chakraborti publications, 2011

REFERENCES

1. Estimating and Costing in Civil Engineering (Theory and Practice) by B.N.Dutta - 28/Revised Edition 2020

PAAVAI ENGINEERING COLLEGE (AUTONOMOUS)

NAMAKKAL -637 018

DEPARTMENT OF CIVIL ENGINEERING

Value Added Course

19CEVC401 - ADVANCED GEOTECHNICAL ENGINEERING

- This course work will cover principles and basics of probabilistic/ stochastic analysis methods and its applications for shallow foundation/retaining wall/soil & GW remediation designs, statistical evaluation of engineering properties of soil/rock, guidance to best available geotechnical/civil filter design with soil and filter properties, and practical exercise problem sets from actual author's project experiences.
- This course clarifies the understanding of probabilistic approach in geotechnical/environmental/civil design, basics of probability analysis and its application to real project problems, Capable to prepare a dam core/filter design report using risk evaluation analysis, Analytical engineering tools to be provided to audience for retaining wall stability/settlement/filter analyses

Date : 25.11.2019 to 29.11.2019

Venue: T226

Course Incharge:

1. Ms.S.Gayathri AP/Civil
2. Mr.A.Arun AP/Civil

19CEVC401 ADVANCED GEOTECHNICAL ENGINEERING

COURSE OBJECTIVES

To enable the students to

- gain knowledge on soil structure and properties
- understand the concepts of stress , strain mechanism of soil
- acquire knowledge on triaxial stress of soil

Module I

Introduction to continuum mechanics - Important constitutive relationship -3D to 2D idealization - Mathematical formulation of plane stress, plane strain -Mathematical formulation of axisymmetric conditions

Module II

Basics of shear strength -Stress representation - Shear strength granular soil-Shear strength cohesive soil

Module III

Stress path-triaxial test-drained -Stress path-triaxial test-undrained- Stress path-additional undrained case - Stress path-field cases

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply gained knowledge on finding properties of soil
- calculate the stress & strain path for both drained & undrained cases
- manipulate the stress path for triaxial cases

TEXT BOOKS

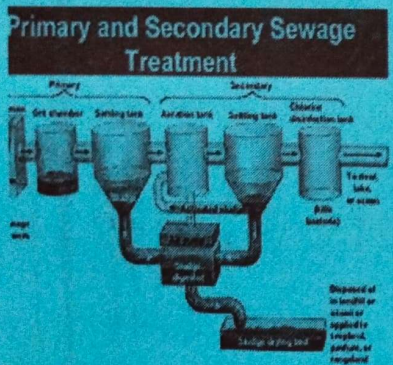
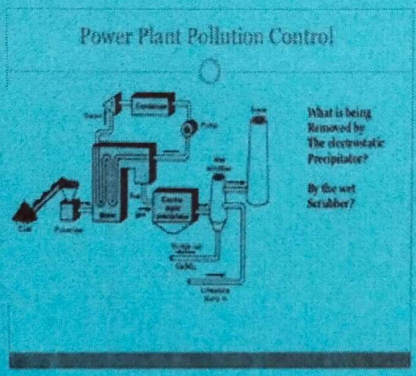
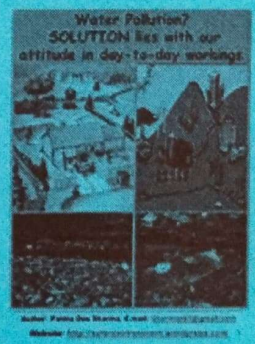
19CEVC501 - POLLUTANTS AND ITS TREATMENT







- This course has emphasizes on pollutants and its treatment aspects within the broad subject area of environmental pollution management.
- This course includes the topics such as State of environment, Definitions of environmental terms, Water pollutants and its modeling, BOD modeling, Chemical treatment, wetland treatment, Soil acidity, soil erosion prediction, universal soil loss equation, Air pollutants, Methods to dispose land pollutants, Introduction to nuclear wastes, Thermal energy disposal methods.

Date : 3.6.2019 to 8.6.2019

Venue: T225

Course Incharge:

Mrs.K.Sharmiladevi AP/Civil

19CEVC501 **POLLUTANTS AND ITS TREATMENT**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on pollutants in air, land & water
- understand the concepts of water softening & distribution
- learn the concept of water distribution network design

Module I

Pollutants and their Effects - Air pollution –Land Pollution - Water Pollution - Water Quality-Criteria & Analysis - Water Requirements - Sources and Collection of Water - Overview of Purification and Pre-Treatment - Theory and Design of Sedimentation

Module II

Theory and Design of Filtration - Theory and Design of Disinfection - Water Softening and Specific Treatments- Storage and Distribution Reservoirs

Module III

Pumps and Pumping Requirements, Valves and Appurtenances - Hydraulic Considerations and Design - Distribution Network-Analysis and Design

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply field procedure on testing pollutants
- calculate the water distribution
- design and analysis the water distribution network

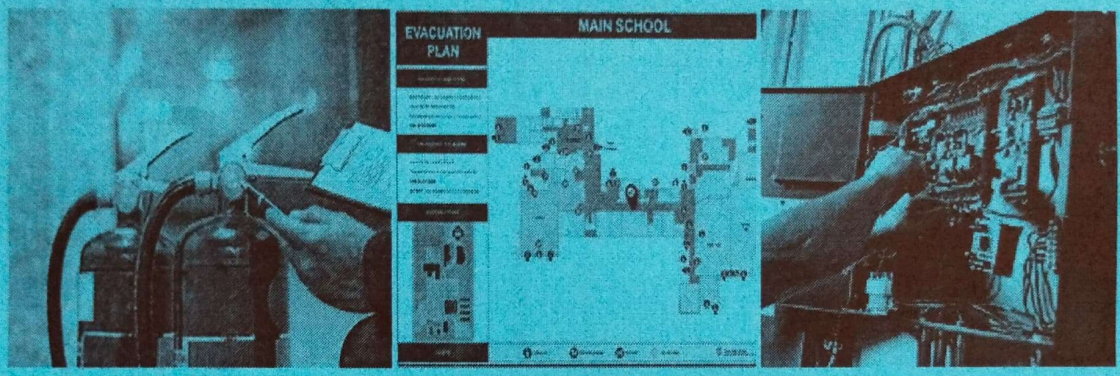
19CEVC601 - FIRE AND SAFETY MAINTENANCE



- The objectives of this course is to expose the students to the concepts functional design of building for thermal aspects and energy efficiency; especially in tropical climates and is to make the student capable of performing fenestration design for natural ventilation and day lighting & design of space for external and internal noise control.
- The course also covers the topics a Fire Protection: Process of combustion in fire, Concepts of fire resistant and severity, Effect of fire on materials and Water Supply, Hydraulic design, Storage Distribution, Component of cold & hot water supply system, Effect of design on maintenance, Diagnosis, appraisal, structural defects & various methods of repair.

Date : 25.11.2019 to 29.11.2019

Venue: T229

Course Incharge:

1. Mr.P.Vignesh AP/Civil
2. Mr.S.Suryapraksh AP/Civil

19CEVC601 **FIRE AND SAFETY MAINTENANCE**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on fire protection & service maintenance in building
- understand the concepts lift design , Ad-hoc maintenance
- acquire knowledge on building inspection

Module I

Basic concepts of fire protection – Fire resistance- Introduction process of combustion- Design of fire resistance steel and concrete – Urban Planning

Module II

Introduction to lift design – Design of lift system – Introduction to system & flow system – life cycle cost and basics of building maintenance

Module III

Planning for Building Maintenance – Building inspection & Ad-hoc maintenance- Diagnosis of building by visual survey

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply knowledge on maintenance of building fire protection
- prepare lift design & know Ad-hoc maintenance service
- inspect the building and find the faults

TEXT BOOKS

1. Fire Protection Handbook (NATIONAL FIRE PROTECTION ASSOCIATION//FIRE PROTECTION HANDBOOK)

REFERENCES

1. Bureau of Indian Standards, " HAND BOOK OF FUNCTIONAL REQUIREMENTS OF BUILDINGS, (SP-41 & SP- 32)", BIS 1987 and 1989.

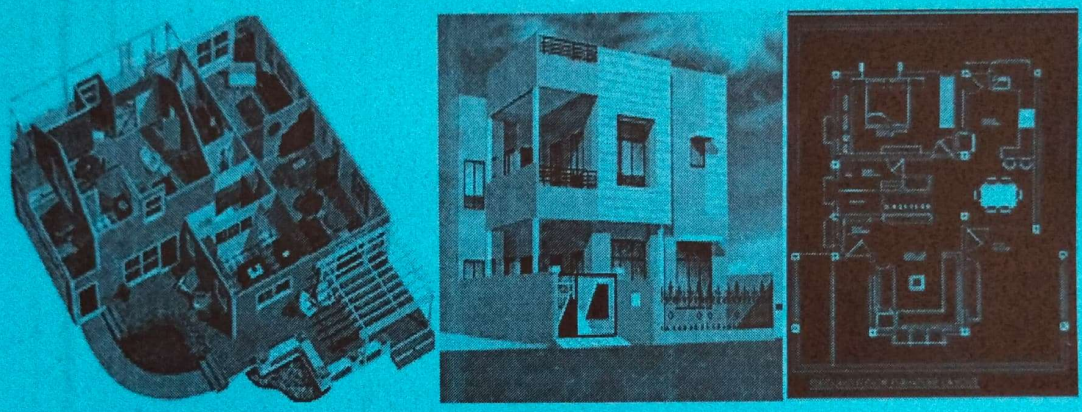
DEPARTMENT OF CIVIL ENGINEERING

Value Added Course

19CEVC701 - AUTOCAD SOFTWARE



- AUTOCAD is the advanced software also known as Computer Aided Design, Which helps us to design various construction projects and design of different systems.
- This course also covers the topics such as Geometric constructions, Orthographic Projections, Isometric projections, Oblique projections, Hatching, Missing lines & Missing views, Angular perspective view and space Geometry, True length, Point view, Slope of oblique lines, Intersection of solids, Development of surfaces.

Date : 3.6.2019 to 8.6.2019

Venue: CADD Laboratory

Course Incharge:

Mr.A.Jayapal AP/Civil

19CEVC701 **AUTOCAD SOFTWARE**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on AUTOCAD software
- understand the AUTOCAD commands usage
- learn hands on training using AUTOCAD software

Module I

Starting with advanced sketching - Drawing Arc -Drawing Rectangles -Drawing Ellipses -Drawing Regular Polygon -Drawing Polylines -Placing Points -Drawing Infinite Lines -Writing a Single Line Text

Module II

Working with drawing aids –Introduction -Understanding the Concept and use of LAYERS -Advantages of Using Layers -Working with Layers- Creating New Layers -Making a Layer Current -Controlling the Display of Layers -Deleting Layers- Object Properties Changing the Colour

Module III

Working with blocks- The Concept of Blocks Advantages of Using Blocks- Drawing Objects for Blocks Converting Entities into a Block Inserting Blocks - Creating and Inserting Annotative Blocks Block Editor Adding Blocks in Tool Palettes Drag and Drop Method Modifying Existing Blocks in the Tool Palettes

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply gained knowledge on drawing plans
- apply the commands for different plans and elevation
- draw the plans 2D and reinforcement detailing using AutoCAD software

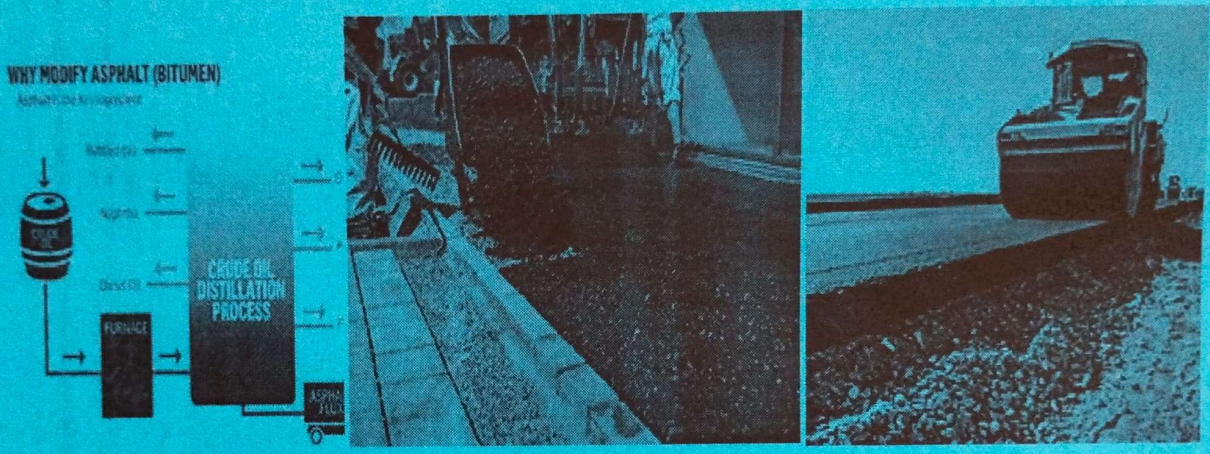
Value Added Course

19CEVC801 - ASPHALT AND ITS APPLICATIONS



- The course will bring you their knowledge and experience to build a strong understanding of today's realities and new perspectives on the future of asphalt.
- The course will cover the topics such as Bitumen market, generalities, the manufacture of asphalt, transport, uses of asphalt, main developments and alternatives and Constitution, structure and characterization of asphalt - specifications- rheology and Health, Safety, Environment & Quality concerns regarding bitumen, and examples of research & innovation actions.

Date : 25.11.2019 to 29.11.2019

Venue: Highway Engineering Laboratory

Course Incharge:

1. Mr. S.Balamurugan AP/Civil
2. Ms.A.Dharani AP/Civil
3. Mr.N.Moorthi AP/Civil

19CEVC801 **ASPHALT AND ITS APPLICATIONS**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on type and properties of bitumen for good roads
- understand the quality , health & safety aspects of bitumen
- acquire knowledge on finding quality of bitumen

Module I

Bitumen market, generalities, the manufacture of bitumen, transport, uses of bitumen, main developments and alternatives

Module II

Constitution, structure and characterization of bitumen - specifications-rheology - Modifications of bitumen and applications (roads, roofing,…)

Module III

Health, Safety, Environment & Quality concerns regarding bitumen, and examples of research & innovation actions

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply the gained knowledge on application of bitumen
- manipulate quantity of bitumen for roads stretch
- find quality of bitumen

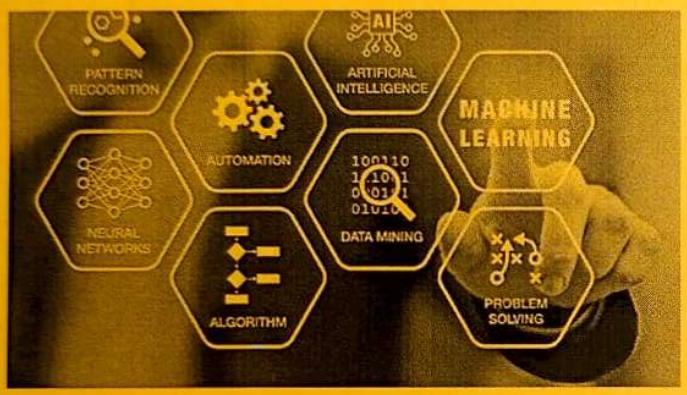
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Value Added Course

19CSVC301-MACHINE LEARNING WITH PYTHON

Machine Learning (ML) is basically that field of computer science with the help of which computer systems can provide sense to data in much the same way as human beings do. In simple words, ML is a type of artificial intelligence that extract patterns out of raw data by using an algorithm or method



Machine learning is a type of artificial intelligence (AI) that provides computers with the ability to learn without being explicitly programmed. Machine learning focuses on the development of Computer Programs that can change when exposed to new data.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to apply a variety of techniques to solve problems in areas such as machine learning and artificial intelligence

Date: 10.06.2019 - 14.06.2019

Venue: Class Room No: Ground Floor Computer Lab

COURSE CO-ORDINATOR

J. Karthik, AP/CSE
R. Loganathan, AP/CSE

19CSVC301 MACHINE LEARNING WITH PYTHON

COURSE OBJECTIVES

To enable the students to

- To understand about Introduction to Machine Learning
- To understand about the concept of regression
- To learn various type of classification methods including SVM, Naive bayes, decision tree, and random forest

Module 1 Introduction to Machine Learning

Applications of Machine Learning

Supervised vs Unsupervised Learning

Python libraries suitable for Machine Learning

Module 2 Regression

Linear Regression

Non-linear Regression

Model evaluation methods

Module 3 Classification

K-Nearest Neighbour

Decision Trees

Logistic Regression

Support Vector Machines

Model Evaluation

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- AnalyzeIntroduction to Machine Learning
- Identify about the concept of regression
- Implement classification methods including SVM, Naive bayes, decision tree, and random forest

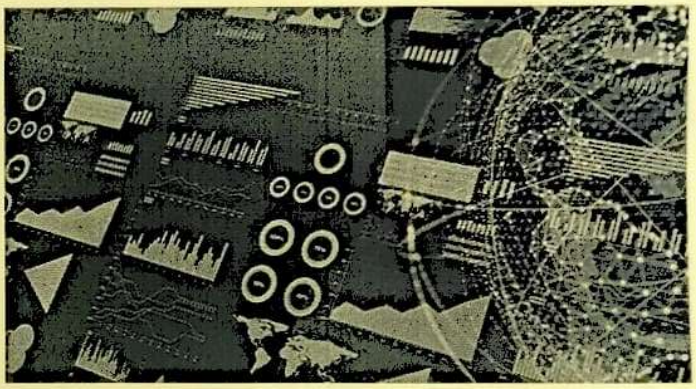
19CSVC401-DATA ANALYTICS WITH R

R analytics is data analytics using R programming language, an open-source language used for statistical computing or graphics. This programming language is often used in statistical analysis and data mining. It can be used for analytics to identify patterns and build practical models.



Data science is an exciting discipline that allows you to turn raw data into understanding, insight, and knowledge. The goal of "R for Data Science" is to help you learn the most important tools in R that will allow you to do data science.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to analyze the data in efficient manner using R programming language

Date: 25.11.2019 - 29.11.2019

Venue: Class Room No: Ground Floor Computer Lab

COURSE CO-ORDINATOR

J. Velumani, ASP/CSE
E. Elanchezhiyan, AP/CSE

19CSVC401 DATA ANALYTICS WITH R

COURSE OBJECTIVES

To enable the students to

- Understanding concepts around Business Intelligence and Business Analytics
- Apply various supervised machine learning techniques
- Use various packages in R to create fancy plots

Module 1

Introduction to terms like Business Intelligence, Business Analytics, Data, Information, how information hierarchy can be improved/introduced, understanding Business Analytics and R, knowledge about the R language

Module 2

Community and ecosystem, understand the use of 'R' in the industry, compare R with other software in analytics, Install R and the packages useful for the course,

Module 3

Perform basic operations in R using command line, learn the use of IDE R Studio and Various GUI, use the 'R help' feature in R, knowledge about the worldwide R community collaboration.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand concepts around Business Intelligence and Business Analytics
- Apply various supervised machine learning techniques
- Use various packages in R to create fancy plots

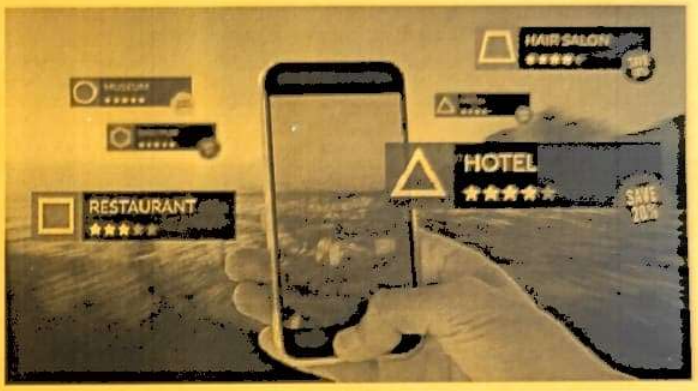
19CSVC601-IOS APP DEVELOPMENT

iOS application development is the process of making mobile applications for Apple hardware, including iPhone, iPad and iPod Touch. The software is written in the Swift programming language or Objective-C and then deployed to the App Store for users to download.



A software application developed for use on Apple's iOS-powered iPhone devices. iPhone apps are available through the Apple App Store and are designed to run on Apple's iOS mobile operating system, which powers the iPhone as well as Apple's iPad and iPod Touch devices.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to design and develop the mobile application in IOS platform using swift and objective C programming languages

Date: 25.11.2019 - 29.11.2019

Venue: Class Room No: 317

COURSE CO-ORDINATOR

P. Renugadevi, ASP/CSE
P. Sandhiya, AP/CSE

19CSVC601 IOS APP DEVELOPMENT

COURSE OBJECTIVES

To enable the students to

- To Understand the concept of Optimizing the app store listing
- To describe about App Store Optimization
- To become familiar with MVP APP

Unit - I

Idea validation and MVP, App monetization models, Optimizing the app store listing - Growth hacking techniques for app downloads, How to get press coverage for your app- How to get your app featured on the app store.

Unit - II

App Store Optimization (ASO) how to rank on the app store search engine, How to use paid advertising to get more customers, Improving your app store ratings and reviews, App analytics, Black hat vs. white hat techniques for app marketing, How to build a app showcase website.

Unit - III

Idea validation and MVP App monetization models Optimising the app store listing Growth hacking techniques for app downloads How to get press coverage for your app How to get your app featured on the app store App Store Optimisation (ASO) how to rank on the app store search engine

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Implement concept of Optimizing the app store listing
- Demonstrate about App Store Optimization
- Implement MVP APP

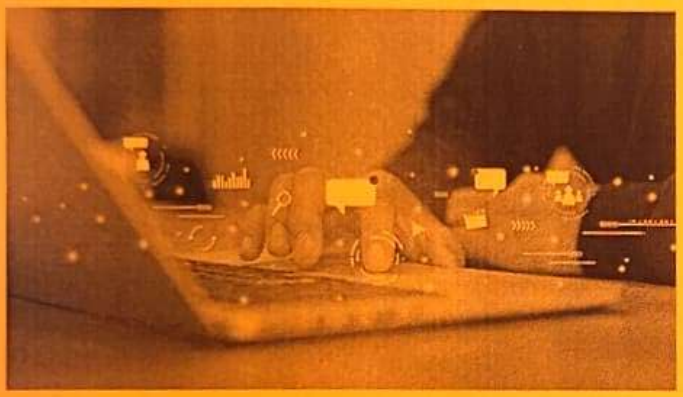
19CSVC701-AMAZON WEB SERVICES

Amazon Web Services is a cloud computing platform that provides customers with a wide array of cloud services. We can define AWS (Amazon Web Services) as a secured cloud services platform that offers compute power, database storage, content delivery and various other functionalities.



As the lead cloud computing platform, Amazon Web Services (AWS) is the primary profit driver fo Amazon. AWS provides servers, storage, networking, remote computing, email, mobile development, and security.

INTENDED AUDIENCE

- IV Year of B.E, B.Tech - Students
- Students able to know how to use AWS and database storage, content delivery and various functionalities.

Date: 03.06.2019 - 08.06.2019

Venue: Class Room No: 315

COURSE CO-ORDINATOR

Dr. D. Banumathy, ASP/CSE
S. Rajesh, ASP/CSE

19CSVC701 **AMAZON WEB SERVICES**

COURSE OBJECTIVES

To enable the students to

- To learn about the different services provided by AWS
- To learn about AWS security
- To understand about RDS

Module 1:

User management through Identity Access Management (IAM), Various access policies across AWS Services, AWS Cognito, AWS Security & Encryption: KMS, CloudHSM, Sheild, and WAF, API keys service access, Best practices for IAM, Access billing and create alerts on billing.

Module 2:

Start, stop and terminate an EC2 Instance, Security Groups, AMI, VPC, ENI, Public, and Private IP, Storage services, Instance Store, EBS and its types, SSDs and Provisioned IOPS, Hard Disk Drives, EFS, EBS vs EFS, Cost optimization.

Module 3:

Amazon RDS and its benefits, Read Replica, RDS IAM Authentication, Aurora: Aurora Serverless& Global Databases, DynamoDB, ElastiCache: Working, Redis vs Memcached, Amazon RedShift: Redshift Spectrum

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Implement the different services provided by AWS
- Demonstrate AWS security
- Analyzeabout RDS

R. Kaviyaraj, AP/CSE

19CSVC801 ANDROID

COURSE OBJECTIVES

To enable the students to

- Understand introduced to Android programming and learn to develop Android applications
- Understand Android development tools, creating user interfaces, and utilizing location based services
- Understand able to write simple GUI applications, use built-in widgets and components

Module 1

Fundamentals • Basic Building blocks – Activities, Services, Broadcast Receivers & Content providers • UI Components- Views & notifications • Components for communication -Intents & Intent Filters • Android API levels(versions & version names)

Module 2

Application Structure • AndroidManifest.xml • uses-permission • Activity/services/receiver declarations • Resources & R.java • Layouts &Drawable Resources • Activities and Activity lifecycle

Module 3

Emulator • Launching emulator • Editing emulator settings • Emulator shortcuts • Logcat usage • Introduction to Android Device Monitor (ADM)

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand introduced to Android programming and learn to develop Android applications
- Understand Android development tools, creating user interfaces, and utilizing location based services
- Understand able to write simple GUI applications, use built-in widgets and components

- acquire knowledge on programming concepts

UNIT I INTRODUCTION TO MATLAB AND MATLAB SOFTWARE **10**

Brief Introduction- Installation of MATLAB- Use of MATLAB- Key features- Introduction to MATLAB Software- MATLAB window- Command window- Workspace- Command history- Setting directory- Working with the MATLAB user interface- Basic commands- Assigning variables- Operations with variables- Working with script tools- Writing Script file- The MATLAB Editor.

UNIT II MATLAB SIMULINK **10**

Introduction Of Simulink- Simulink Environment & Interface- Study of Library- Circuit Oriented Design- Equation Oriented Design- Model- Subsystem Design- Connect Call back to subsystem- Application

UNIT III MATLAB PROGRAMMING **10**

MATLAB Programming- Writing programs with logic and flow control- Writing functions- Control statement Programming- Conditional Statement Programming- Examples.

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the need for simulation/implementation for the verification of mathematical functions.
- Understand the main features of the MATLAB/SCILAB program development environment to enable their usage in the higher learning.
- Implement simple mathematical functions/equations in numerical computing environment such as MATLAB/SCILAB.

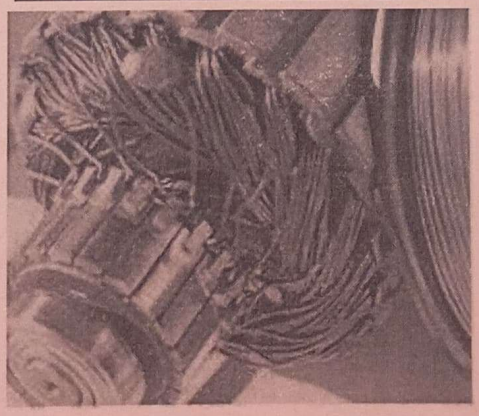
INDUCTION MOTOR WINDING



Course Duration: 03.06.2019-08.06.2019

Venue: PEC-Temple Tower -T212

Course Coordinator: S.Ramachandran AP/EEE

19EEVC501 INDUCTION MOTOR WINDING

COURSE OBJECTIVES

To enable the students to

- Understand the concept of induction motor
- Acquaire knowledge on coil preparation
- Gain details about insulation preparation

UNIT I SINGLE PHASE INDUCTION MOTOR 10

Working principle, different method of starting and running (capacitor start, permanent capacitor, capacitor start & run, shaded pole technique). FHP motors, Repulsion motor, stepper motor, Application of single phase motor. Single phase induction motor -

UNIT II COIL PREPARATION 10

Preparation of the core before winding - Manufacture of formers - Preparation of coils on different types of coil winding machines as applied - Cutting operations on various types of insulating materials used for slot liner, layer Separators, slot wedge, phase, separator etc. and shaping and binding of overhangs.

UNIT III **INSULATION PREPARATION**

Winding Extensive shop floor practice on actual winding, consisting of the following operations - Insertion of insulating materials in the slots, Insertion of coils and folding over the insulation and wedges driving, End connection inclusive of commutator if involved, Soldering / brazing of coil ends of the winding wire and lead cables and core, Overhang banding with cord, steel wire or semi cured polyester glass tape.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Describe the basics of concept of induction motor
- analyse on coil preparation
- demonstrate insulation preparation

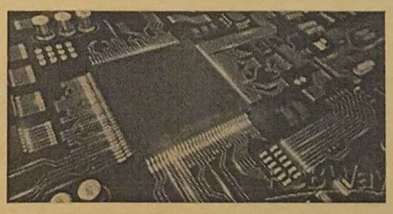
PCB DESIGN AND COMPONENT TESTING

Course Duration: 25.11.2019-25.11.2019

Venue: PEC-Temple Tower -T212

Course Coordinator: S.Rathinavel AP/EEE



19EEV601 PCB DESIGN AND COMPONENT TESTING

COURSE OBJECTIVES

To enable the students to

- Develop the skills in PCB designing using PSPICE tool and testing & troubleshooting
- Design and test PCB layout and study the PCB manufacturing process
- Troubleshoot the errors in PCB design

UNIT I INTRODUCTION **10**

Introduction to Printed circuit Board: Fundamentals of circuit design- Introduction to Analog and digital circuit design-Definition and Evolution of PCB Printed Circuit Technology-Creating blank PCB.

UNIT II PSPICE TOOL **10**

Introduction to SPICE and PSPICE Environment -Schematic Entry Creating Library Components-Drawing Schematic-Flat Design-Hierarchical design Net listing-PCB designing of Basic analog electronic components, Power supplies, Different sensor modules, Embedded projects.

UNIT III POST DESIGNING AND FABRICATION PROCESS **10**

PCB Layout Design Prototype Designing-Design Rule Checking (DRC),Design Formanufacturing(DFM)-Printing-Etching-Drilling-Soldering&Desoldering-ComponentMounting-PCB Hardware testing-Checking Errors

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Know the concepts of circuit design and importance of PCB designing
- Understand the different component package types
- Familiarize with various EDA tools for identifying electronic components

TEXT BOOKS

1. PCB Design for Real-World EMI Control, R. Archambeault and James Drewniak

COMPUTER APPLICATIONS IN POWER SYSTEM OPERATION AND PLANNING

Course Duration: 03.06.2019-08.06.2019

Venue: PEC-Temple Tower -T213

Course Coordinator: S.Suganya AP/EEE

19EEVC701

COMPUTER APPLICATIONS IN POWER SYSTEM OPERATION AND PLANNING

COURSE OBJECTIVES

To enable the students to

- Understanding how computers applications are used in power systems for operation, and planning
- know practical industrial applications of computers in power systems
- know the power system economic dispatch.

UNIT I BASICS OF POWER SYSTEM STRUCTURE **10**

Basic Concepts of Computer Applications in Power Systems; Multi-Level structure Grouping of various computer based applications of power systems. Real Time Modeling and System Studies Power System State Estimation: Problem formulation, Mathematical formulation, Solution Approaches, Case Study, Complete System State Estimation, Bad Data Processing

UNIT II SECURITY SYSTEM **10**

Decomposition techniques in Power System State Estimation. Large Scale State Estimation. Power System Security: Security Assessment and Analysis, Security Assessment Studies. Solution methods, Case Study and Simulation Example, Security Constrained Studies. Contingency Analysis and Network Outage Simulation. Solution methods

UNIT III POWER SYSTEM ECONOMIC DISPATCH **10**

Economic Dispatch (ED) and Unit Commitment (UC). Mathematical formulation, Solution Approaches Security Constrained ED and UC Optimal Power Flow, Problem Formulation, Mathematical formulation, Solution Approaches

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- describe Planning and operations of the power system is understood.
- Explain Industrial applications of computers in power systems are studied.
- Enumerate power system economic dispatch are analysed.

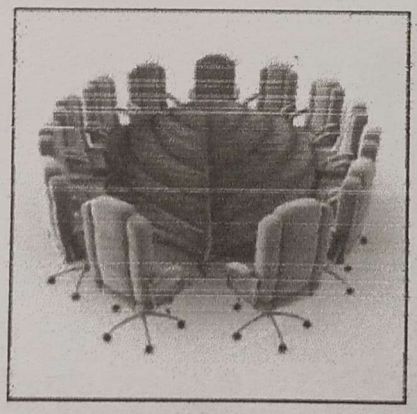
ENTREPRENEURSHIP AND SOCIAL RESPONSIBILITY



Course Duration: 25.11.2019-29.11.2019

Venue: PEC-Temple Tower -T213

Course Coordinator: R.Muthukumar AP/EEE

19EEVCS01 ENTREPRENUERSHIP AND SOCIAL RESPONSIBILITY

COURSE OBJECTIVES

To enable the students to

- provide knowledge about The Social Entrepreneurship
- develop "a Social entrepreneurial imagination and to bring out the practice of Social Entrepreneurship in India.
- Understand about the entrepreneurship process

UNIT I ENTREPRENEUR AND ENTREPRENEURSHIP 10

Meaning, definition: Entrepreneur, Entrepreneurship. Types of Entrepreneurs –Social entrepreneur, Serial entrepreneur, Life style entrepreneur. Types of Entrepreneurship –creative entrepreneurship, inclusive entrepreneurship, knowledge entrepreneurship. Entrepreneurial characteristics: Inspiration, creativity, direct action, courage and fortitude.

UNIT II SOCIAL ENTREPENEUR, SOCIAL ENTREPRENEURSHIP AND SOCIAL ENTER PRISES 10

Meaning, definition: Social entrepreneur, social entrepreneurship, social enterprises. Characteristics of Social Entrepreneurship - Explicitly formulated mission to create and sustain social value and to benefit the communities, high degree of economic risk and autonomy in activities related to producing goods and/or selling services, pursuit of new opportunities and exploration of hidden resources to serve that missions, quest for sustainable models, based on well elaborated feasibility study.

UNIT III THE SOCIAL ENTREPRENEURSHIP PROCESS 10

The Timmons Model of the Entrepreneurship Process, The PCDO (The People, Context, Deal, and opportunity)frame work, The Case Model, The Social Entrepreneurship Frame work. Sources of Social Entrepreneurship -Public Sector, Private Sector, Voluntary Sector.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- explain about the Social Entrepreneurship
- Social entrepreneurial imagination and to bring out the practice of Social Entrepreneurship in India.
- Describe the social entrepreneurship process

VALUE ADDED COURSE

ON

19MEVC301- SURFACE COATING

ABOUT THE COURSE:

Surface Coating Technology in engineering deals with new trends in Coating technology and Surface Engineering for the synthesis of functional materials including fabrication methods, materials and applications, characterization techniques and numerical simulation, research, and modelling.

.INTENDED AUDIENCE:

- II-, III- and IV-year students those interested find different coating material.
- Those wants to improve their knowledge in surface coating and its method.
- Those who need to improve skill in coating technology.

DURATION OF THE COURSE:

Period: 10.06.2019 to 14.06.2019

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. select appropriate material for coating.
2. demonstrate the preparation method of coating materials.
3. Identify the surface modification of components using suitable characterization techniques
4. Select the suitable coating technique for surface treatment.

COURSE IN CHARGE:

1. **Mr. T.THANGAVEL,** AP/MECH,PEC
2. **Mr. N.MANIGANDAN,** AP/MECH, PEC
3. **Mr. S.T.KUMARAVEL,** AP/MECH, PEC

VENUE:
SEMINAR HALL II,
PAAVAI ENGINEERING COLLEGE

Note: Interested students enroll their name to the course in charge on or before 01.06.2019.

Scanned by CamScanner

19MEVC301 SURFACE COATINGS

COURSE OBJECTIVES

To enable the students to

- know the basics of coatings.
- know different materials used for coating.
- understand the concepts and application of surface coating.

1. **Coating**

   Properties and applications of the given materials used in surface coating preparation, solvent containing systems and enamels.

2. **Application of Coatings**

   Rod coating, Dip coating, Effects of given factors on bio-degradation. Premiered coatings occurring procedure of coatings and its application.

3. **Coating methods**

   Roll coating, Reverse roll coating, gravure roll coating, Premiered coatings like extrusion coaters Slide or cascade coaters, curtain coaters, cast Coating

4. **Adhesives**

   Interfacial contact, Surface tension wettability and spreading, Basic terminology-adhesive, adherent, substrate. Types of adhesives.

5. **Composition of adhesives**

   Composition of adhesives-backbone polymer, solvent thinner, catalyst, hardener, extension-filler, plasticizers, prevention process, resin kettle.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Select coating method for a given product.
- Use relevant coating for particular application.
- Use surface treatments with the substrates for adhesion.

VALUE ADDED COURSE

ON

19MEVC401- COMPUTER AIDED DESIGN SOLIDWORKS

ABOUT THE COURSE:

Introduces SolidWorks software as a 3-D design tool. Covers creation, retrieval and modification of 3-D and layout drawings using basic SolidWorks commands. Includes skills needed to create parametric models of parts and assemblies; generate dimensioned layouts; and Bill of Materials of those parts and assemblies. Audit Available.

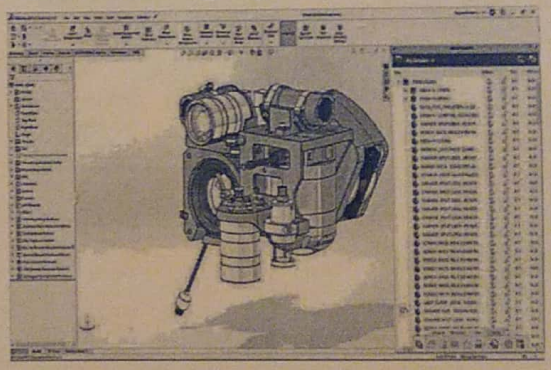
INTENDED AUDIENCE:

- II-, III- and IV-year students those interested machine designing.
- Those wants to improve their knowledge in part drawing and assembly of parts.
- Those who need to improve skill to make bill of materials in designing.

DURATION OF THE COURSE:

Period: 25.11.2019 to 29.11.2019

Total hours: 30 Hours (6 Hours /day)



COURSE OUTCOMES:

At the end of this course students can be able to

1. use the SolidWorks software package to create advanced models, parts, assemblies, and related documents (e.g. bill of materials, parts lists)
2. construct, modify, and manage complex parts in 3D space as well as to produce 2D drawings from the 3D models3. Identify the surface modification of components using suitable characterization techniques.
3. apply geometric dimensioning and tolerancing (GDT) in machining/drafting.
4. interpret working drawings for various industries

COURSE IN CHARGE:

1. **Mr. R.MEIYAZHAGAN,** AP/MECH,PEC
2. **Mr. S.MANIRAJ,** AP/MECH, PEC
3. **Mr. V.YOGESH,** AP/MECH, PEC

COMPUTER AIDED DESIGN SOLIDWORKS

19MEVC401

COURSE OBJECTIVES

To enable the students to

- Use basic and advanced features of current CAD software.
- Understand how CAD technology can be leveraged in the design process.

INTRODUCTION TO CAD, CAE, PDM

Features of solid works, various tools available in Solid works for product design – Solid Works GUI – feature manager, design tree, Callouts, Handles, Confirmation corner, mouse buttons. Keyboard shortcuts, Command manager–File management.

SKETCHING

Sketching environment – Sketch entities – Inference line, Centerline line, Line, Circle, Arc, Ellipse, Rectangle, Slots, Polygon, Ellipse, Partial Ellipse, Spline, Spline tools, Points, Text, Construction geometry, Snap, grid – Sketch Relations– Blocks – Make block, Edit block, Insert block, Add/Remove Entities, Rebuild, Save, Explode.

INTRODUCTION TO PART MODELING

Reference geometry – Co–ordinates, Plane, Axis and Points – Modeling features – Extrude, Revolve, Swept and Loft– Relations –Adding Sketch Relation, Automatic relations – Creating extrude features — Creating revolve features–Creating helix and spiral – Creating loft features

PART MODELING – FEATURES

Fillets, Chamfers, Shell, Rib, Draft, Hole – Creating pattern – Linear pattern, Circular pattern, Sketch driven pattern, Curve driven pattern, Table driven pattern, Fill pattern, Mirror – Other tools – Inserting library feature, Measuring geometries, Materials, Mass properties, Selection manager, Multiple body concepts

ASSEMBLY MODELING

Introduction to assembly modeling & approaches – Top down and bottom up approach – Applying standard mates–Coincident, Parallel, Perpendicular, Tangent, Concentric, Lock, Distance, Angle – Top down design – Layout sketch, Work part in the context of an assembly

TOTAL PERIODS 30

COURSEOUTCOMES

Upon completion of this course the student will

- demonstrate competency with multiple drawing and modification commands in SolidWorks.
- create three-dimensional solid models.

DEPARTMENT OF MECHANICAL ENGINEERING

VALUE ADDED COURSE

ON

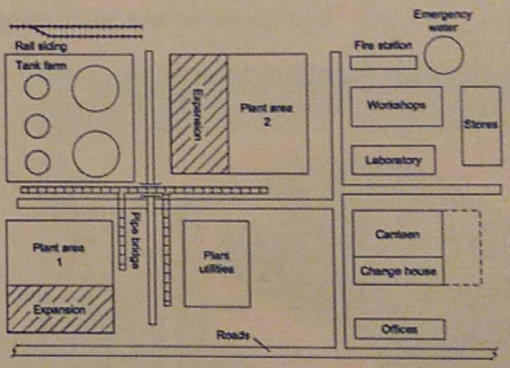
19MEVC501- PLANT DESIGN

ABOUT THE COURSE:

The course is expected to impart a holistic approach towards process design i.e. the objective is not to arrive at only the design of individual process equipment, but also to configure it as a complete functional system with its accessories. In other words, it shall deal with process design from the industry perspective. Discussions on process utilities, piping and hydraulics, instrumentation and safety basics will supplement the equipment design procedure and enable understanding of complete plant design.

INTENDED AUDIENCE:

- II-, III- and IV-year students those interested in designing.
- Those wants to improve their knowledge in plant layout designing.
- Those who need to improve skill in arrangement of machinery and its relative things in plant.



DURATION OF THE COURSE:

Period: 03.06.2019 to 08.06.2019

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. select appropriate location for establishing industrial plants by applying the concepts of location selection.
2. plan and design plant and production layouts through basic strategies
3. identify and analyse the problems in the existing layout.
4. represent the designing structure of the plant.

COURSE IN CHARGE:

1. **Mr. K.ANAND,** AP/MECH,PEC
2. **Mr. C.SURESH,** AP/MECH, PEC
3. **Mr. R.THIRUNAVUKARASU,** AP/MECH,

VENUE:
CAD/CAM LABORATORY,

19MEVC501 PLANT DESIGN

COURSE OBJECTIVES

To enable the students to

- know the basics of plant design.
- know need of plant designing.
- design the plant for new industrial sector.

1. **Introduction**

   Basic considerations in engineering plant design, optimization and feasibility of plant design.

2. **Process design aspects**

   Selection of process-factors affecting process selection. Types of project design, Importance of Laboratory development pilot plant, safety factors, types of flow diagrams.

3. **Selection of process equipments**

   Standard versus special equipment-material of construction for process equipments, selection criteria, and specification sheets.

4. **Process auxiliaries and Process utilities**

   Piping design, layout, and supports for piping insulations. Pipe fittings, types of valves, selection of valves, process control and instrumentation control system design

5. **Plant location and layout**

   Factors affecting plant location, factors in planning layouts, principles of plant layout, use of scale models.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of plant design for an industry.
- Apply the concepts for making plant designing for an industry.
- Represent the designing structure of the plant.

ON

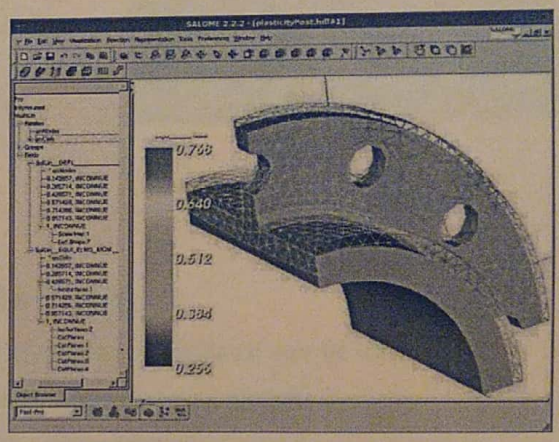
19MEVC601- COMPUTER AIDED ANALYSIS HYPERMESH

ABOUT THE COURSE:

Hypermesh is the market-leading, multi-disciplinary finite element pre-processor which manages the generations of largest, most complex models, starting from the import of a CAD geometry to exporting a ready-to-run solver file. It supports a wide variety of CAD and solver interface, making it a perfect solution for most industry verticals and domains. With its advanced geometry and meshing capabilities, Hypermesh provides an environment for rapid model generation.

INTENDED AUDIENCE:

- II-, III- and IV-year students those interested in designing and modeling area.
- Those wants to improve their soft skills knowledge in designing area.
- Those who need to improve their knowledge in meshing.



DURATION OF THE COURSE:

Period: 25.11.2019 to 29.11.2019

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. perform 1D mesh, in 1D mesh we are doing 1D connections for analysis.
2. do tetra mesh by using volume tetra and other options in tetra mesh.
3. assign boundary conditions using Load Collector option in Hyper mesh.
4. perform Static Analysis both linear and non-linear analysis.

COURSE IN CHARGE:

1. **Mr. S.KARTHIKEYAN,** ASP/MECH,PEC
2. **Mr. R.GUNASEKARAN,** AP/MECH, PEC
3. **Mr. M.VINOTHKUMAR,** AP/MECH, PEC

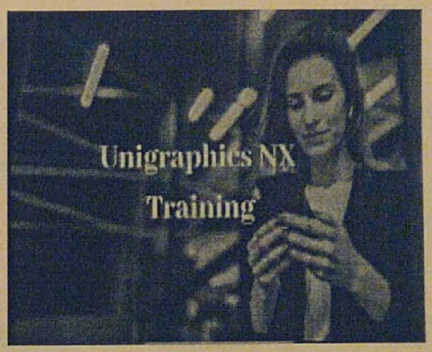
19MEVC701- COMPUTER AIDED DESIGN UNIGRAPHICS

ABOUT THE COURSE:

A full spectrum design modeling, analysis, simulation and manufacturing CAD/CAE/CAM software from Unigraphics Solutions • One of the older and well-established CAD/CAE/ CAM system. A software of choice for a wide variety of applications, especially in automotive and aerospace product development.



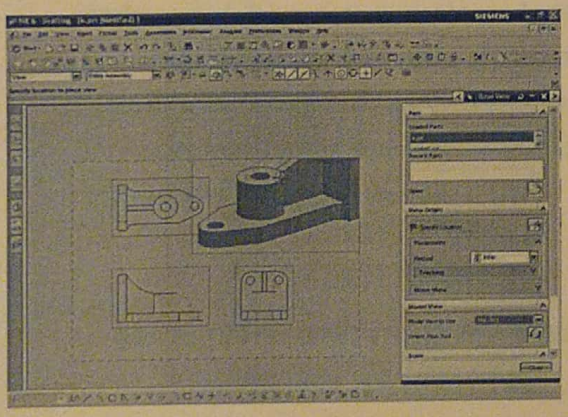
INTENDED AUDIENCE:

- II-, III- and IV-year students those interested in designing and modeling area.
- Those wants to improve their soft skills knowledge in designing area.

DURATION OF THE COURSE:

Period: 03.06.2019 to 08.06.2019

Total hours: 30 Hours (6 Hours /day)



COURSE OUTCOMES:

At the end of this course students can be able to

1. Create multiple drawing and modification the drawing with commands in Unigraphics
2. Create three-dimensional solid models.
3. Create three-dimensional assemblies incorporating multiple solid models.
4. Apply industry standards in the preparation of technical mechanical drawings.

COURSE IN CHARGE:

1. **Mr. M.S.VIJAYANAND,** ASP/MECH,PEC

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling and analysis of mechanical components.

INTRODUCTION

Introduction to CAD, CAE Features of Creo, Concepts:-Modeling ,Parametric , Associative , Feature based Creo Graphical User Interface - Feature manager design tree, , Handles, mouse buttons, keyboard shortcuts, Understanding the Windows Menu Hardware and Software requirements

SKETCHER WORKBENCH

Sketch Entities – Inference line, Centerline line, Line, Circle, Arc, Ellipse, Rectangle, Slots, Polygon, Parabola, Ellipse, Partial Ellipse, Spline, Spline tools, Spline on surface, Equation driven curve, Points, Text, Construction geometry, Snap, grid,

PART MODELING

Creating reference planes Creating Extrude features – Direction1, Direction2, From option, Thin feature, Applying draft, Selecting contours Creating Revolve features – Selecting Axis, Thin features, Selecting contours Creating Swept features-Selecting, Profile and Path, Orientation/twist type, Path Alignment, Guide Curves, Start/End tangency, Thin feature

ASSEMBLY DESIGN

Introduction to Assembly Modeling & Approaches – Top down and Bottom up approach Applying Standard Mates- Coincident, Parallel, Perpendicular, Tangent, Concentric, Lock, Distance, Angle.

DRAFTING AND DETAILING

Inserting Annotations - Datum Features, Geometric Tolerance, Surface Finish, Jog Leaders, Hole Callout, Datum Target, Dowel Pins, Area Hatch, Cosmetic Thread, Balloon, Centre Mark, Centre Lines, Layers, Working With Tables, Bill Of Materials, Hole Table, Sheets And Templates, Sheet Format.

TOTALPERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

T.R. ARUNPRASAND, AP/MCT

19MTVC301 ROBOTIC PROCESS AUTOMATION

COURSE OBJECTIVES

To enable the students to

- know the basics of automation.
- know key elements of automation.
- apply the concepts of automation in industry.

1. **INTRODUCTION TO ROBOTIC PROCESS AUTOMATION**

   Introduction to RPA and Use cases – Automation Anywhere Enterprise Platform – Advanced features and capabilities.

2. **WEB CONTROL ROOM**

   Introduction - Features Panel - Dashboard (Home, Bots, Devices, Audit, Workload, Insights) - Features Panel – Activity (View Tasks in Progress and Scheduled Tasks) - Bots (View Bots Uploaded and Credentials)

3. **COATING METHODS**

   Roll coating, Reverse roll coating, gravure roll coating, Premiered coatings like extrusion coaters Slide or cascade coaters, curtain coaters, cast Coating

4. **BOT CREATOR**

   Introduction – Recorders – Smart Recorders – Web Recorders – Screen Recorders - Task Editor – Variables - Command Library – Loop Command – Excel Command – Database Command - String Operation Command

5. **META BOT AND BOT INSIGHT**

   Introduction – Meta Bot Designer – Meta Bot With AI Sense - Bot Insight - Transactional Analytics - Operational Analytics - Course Key Points.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of automation in industry.
- Use basic key elements in appropriate place for automation.
- Design and make the industry in complete automation sector.

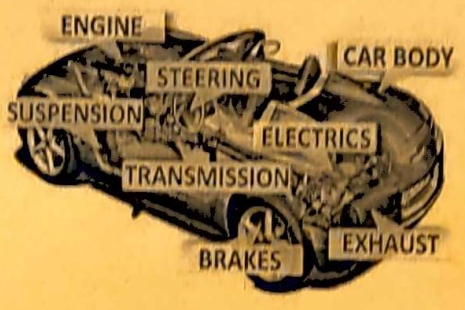
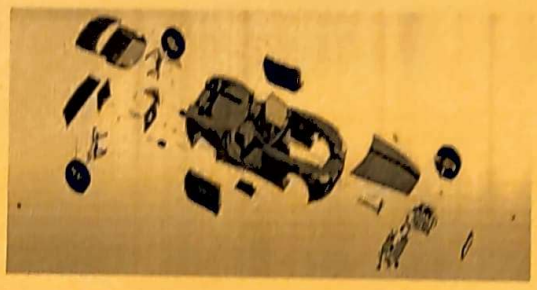
19MTVC401 - DESIGN OF AUTOMOBILE COMPONENTS

COURSE CONTENT:

- ✓ CHASSIS SYSTEMS
- ✓ EXTERIOR SYSTEMS
- ✓ VEHICLE ENHANCEMENT PACKAGES
- ✓ INTERIOR SYSTEMS





DATE : 25.11.2019 to 29.11.2019

VENUE: T328

COURSE IN-CHARGE

Dr. R.T. AJAY KARTHIK, ASP/MCT

S. PUNITHAN, AP/MCT

19MTVC401 DESIGN OF AUTOMOBILE COMPONENTS

COURSE OBJECTIVES

To enable the students to

- know the basics design procedure of Automobile parts.
- know various kind of commands and order used in particular software.
- write the program to various operations.

1. **BODY SYSTEMS**

   Complete Body-In-White, Floor Pans, Underbody Assemblies, Door/Hood/Deck Assemblies, Roof Panels

2. **CHASSIS SYSTEMS**

   Cross member Assemblies, Radiator Supports, Shock Towers, Engine Cradles, Front and Rear Sub-Frame Assemblies, Front and Rear Suspension Modules

3. **EXTERIOR SYSTEMS**

   Front and Rear Fascias , Energy Management Systems

4. **VEHICLE ENHANCEMENT PACKAGES**

   Ground Effects, Roof Racks, Running Boards.

5. **INTERIOR SYSTEMS**

   Door module, power closure system, Driver control, Latching system

TOTAL PERIODS 30

COURSE OUTCOMES At the end this course, students will be able to

- use the Pro-e software to design the various elements in the particular area.
- develop the various elements in the automobile structure and assemble to convert as single unit.
- Make different unit in the Automobile structure.

TEXT BOOKS

1. How to Draw Cars Like a Pro, 2nd Edition Thom Taylor and Lisa Hallett.

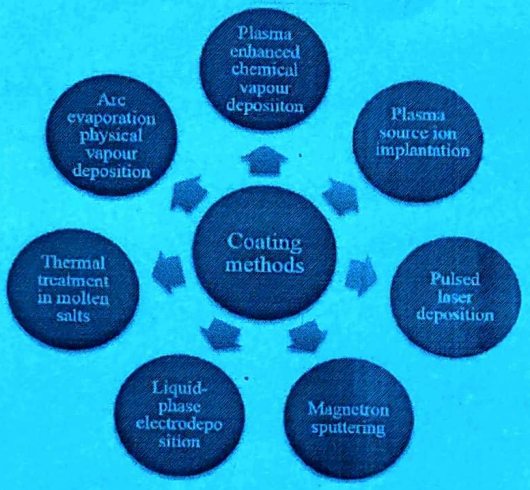
VALUE ADDED COURSE

19MTVC501 - METHODS OF COATINGS

COURSE CONTENT:

- ✓ APPLICATION OF COATINGS
- ✓ COATING METHODS
- ✓ ADHESIVES
- ✓ COMPOSITION OF ADHESIVES



DATE : 3.6.2019 to 7.6.2019

VENUE: T327

COURSE IN-CHARGE

S. MANIKANDAN, AP/MCT

Dr. D.R.P. RAJARATHNAM, PROF/MCT

19MTVC501 METHODS OF COATINGS

COURSE OBJECTIVES

To enable the students to

- know the basics of coatings.
- know different materials used for coating.
- understand the concepts and application of surface coating.

1. **COATING**

   Properties and applications of the given materials used in surface coating preparation, solvent containing systems and enamels.

2. **APPLICATION OF COATINGS**

   Rod coating, Dip coating, Effects of given factors on bio-degradation. Premiered coatings occurring procedure of coatings and its application.

3. **COATING METHODS**

   Roll coating, Reverse roll coating, gravure roll coating, Premiered coatings like extrusion coaters Slide or cascade coaters, curtain coaters, cast Coating

4. **ADHESIVES**

   Interfacial contact, Surface tension wettability and spreading, Basic terminology-adhesive, adherent, substrate. Types of adhesives.

5. **COMPOSITION OF ADHESIVES**

   Composition of adhesives-backbone polymer, solvent thinner, catalyst, hardener, extension-filler, plasticizers, prevention process, resin kettle.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Select coating method for a given product.
- Use relevant coating for particular application.
- Use surface treatments with the substrates for adhesion.

TEXT BOOKS

1. Paints and surface coatings: Theory and Practice. Lambourne, R. and Strivens, T. A.

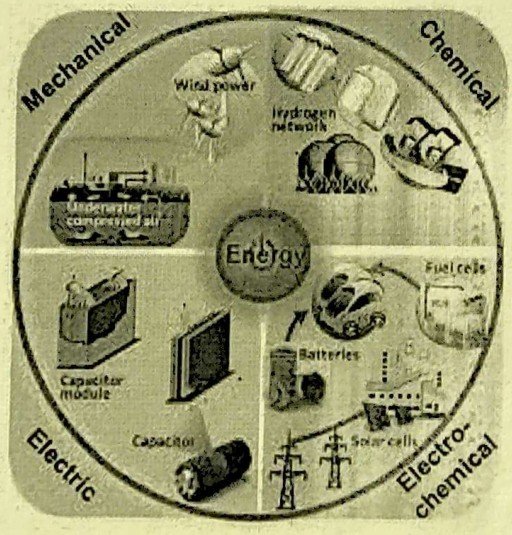
VALUE ADDED COURSE

19MTVC601 - ROLES OF ENERGY STORAGE DEVICES

COURSE CONTENT:

- ✓ ENERGY STORAGE CLASSIFICATION
- ✓ LEAD ACID BATTERIES
- ✓ LITHIUM BATTERIES
- ✓ ENERGY STORAGE



DATE : 25.11.2019 to 29.11.2019

VENUE: T327

COURSE IN-CHARGE

R. ARUNBABU, AP/MCT

P. SABARI, AP/MCT

19MTVC601 ROLES OF ENERGY STORAGE DEVICES

COURSE OBJECTIVES

To enable the students to

- Know the need of energy storage.
- Know different form of energy storage system.
- Understand the concepts and application of energy storage.

1. **ROLE OF ENERGY STORAGE**

   Natural process of photosynthesis, Biomass, peat, and fossil carriers, and finish in the time of renewables.

2. **ENERGY STORAGE CLASSIFICATION**

   storage and energy storage systems, application and how they are classified according to physical, temporal and economic criteria

3. **LEAD ACID BATTERIES**

   Electro-chemical energy storage the terms batteries and accumulators, electrodes, electrolyte Ion-conductive phase.

4. **LITHIUM BATTERIES**

   Electro-chemical energy storage the terms batteries and accumulators, electrodes, electrolyte Ion-conductive phase for lithium batteries.

5. **ENERGY STORAGE I**

   Chemical energy storage is the backbone of the conventional energy supply. Solid (wood & coal), fluent (crude oil) and gaseous (natural gas) energy carriers are different types of energy storage

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Select suitable energy storage system depending on necessity.
- Use relevant storage system for particular application.
- Differentiate the various storage system.

TEXT BOOKS

1. Energy Storage Systems and Components, Alfred Rufer

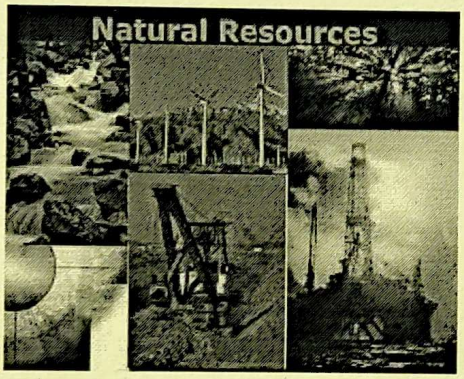
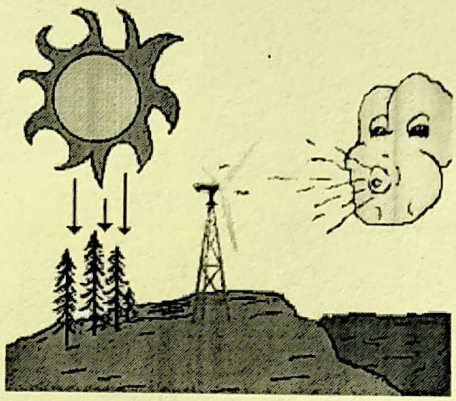
VALUE ADDED COURSE

19MTVC701 - NATURAL ENERGY RESOURCES

COURSE CONTENT:

- ✓ SOLAR ENERGY
- ✓ WIND ENERGY
- ✓ BIO ENERGY
- ✓ OTHER RENEWABLE ENERGY RESOURCES





DATE : 3.6.2019 to 7.6.2019

VENUE: T326

COURSE IN-CHARGE

C. VIBIN STALIN, AP/MCT

M. RAMESH, AP/MCT

19MTVC701 **NATURAL ENERGY RESOURCES**

COURSE OBJECTIVES

To enable the students to

- concepts of the renewable energy sources like wind, solar, Bio and other renewable energy resources.
- environmentally friend energy production and consumption.
- energy-efficient systems and products for various applications.

1. **INTRODUCTION**

   Energy needs of India, classification of energy sources, energy efficiency and energy security, importance of renewable energy resources.

2. **SOLAR ENERGY**

   Basic concepts, types of collectors, collection systems, photo voltaic (PV) technology: solar thermal effect, solar cells, characteristics of PV systems, equivalent circuit, and array design

3. **WIND ENERGY**

   Wind power systems, wind speed and power relation components, turbine types, turbine rating. Choice of generators and site selection

4. **BIO ENERGY**

   Bio-mass and bio-gas: principles of bioconversion, bio-gas digesters types, gas yield, and combustion characteristics

5. **OTHER RENEWABLE ENERGY RESOURCES**

   Geothermal energy, ocean thermal energy, wave energy, Tidal energy, waste to energy, heat to energy, Fuel cells: types and applications.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- provide environmentally friend energy production and consumption system.
- design energy-efficient systems and products for various applications

TEXT BOOKS

1. A.Duffie and W.A.Beckmann, Solar Engineering of Thermal Processes-John Wiley.

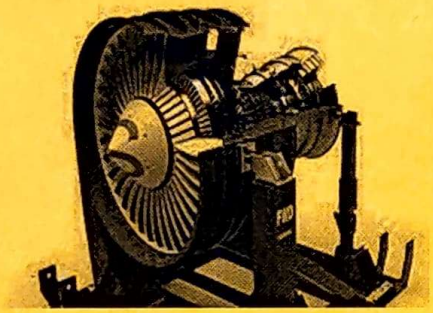
DEPARTMENT OF MECHATRONICS

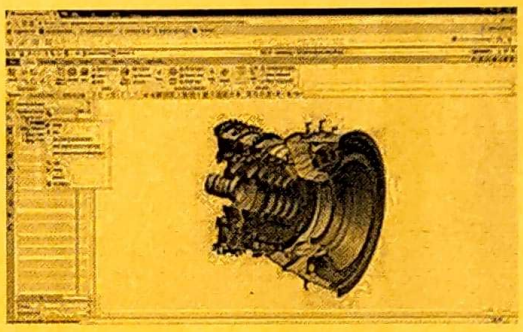
VALUE ADDED COURSE

19MTVC801 - COMPUTER AIDED DESIGN IN UNIGRAPHICS

COURSE CONTENT:

- ✓ ASSEMBLY DESIGN
- ✓ DRAFTING
- ✓ VISUALIZATION
- ✓ CONSTRAINTS





DATE : 25.11.2019 to 29.11.2019

VENUE: T326

COURSE IN-CHARGE

C. SUMITHRA, AP/MCT

S. RAJESH RAJA, AP/MCT

COMPUTER AIDED DESIGN IN UNIGRAPHICS

19MTVC801

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modelling techniques that would enhance the productivity in modelling.
- understand the analysis of mechanical components.
- familiar in sheet metal design and drafting.

1. INTRODUCTION

Introduction, Sketch, Curve, Curve Operations, Form Feature, Feature Operation, Transform

2. ASSEMBLY DESIGN

Assembly of Components, Exploded Views, Sequencing, Context Control, Cloning and Component arrays editing, Top Down Assembly.

3. DRAFTING AND DETAILING

Drawing sheets, Views, Dimensioning, Annotations, Symbols, Tabular note and Part list.

4. VISUALIZATION

Cut part by Sketch Plane - 3D Element visualization - 2D Element visualization - Diagnostics - Dimensional Constraints - Geometrical Constraints.

5. CONSTRAINTS

Constraint Creation - Contact Constraint - Fix together - Auto Constraint - Animate Constraint - Edit Multi Constraint.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- learnt to do product design, industrial design and styling (optimize form, fit, and function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.
- learnt the dimension and modelled components.

19BMVC301-WEB DESIGN

COURSE CONTENT

Module 1: Web Design Principles

Module 2: Basics in Web Design

Module 3: Introduction to HTML

Module 4: Elements of HTML

Module 5: Introduction to Cascading Style Sheets

DATE: 01.07.2019 – 05.07.2019

VENUE: BIOMEDICAL SIGNAL PROCESSING LABORATORY

COURSE COORDINATOR: S.R. THIRUVASAKAM, AP/BME

3.6.19

Head of the Department
Department of Biomedical Engineering
Paavai Engineering College
Paavai Nagar, Pachal,
Namakkal-637 018.

19BMVC301 **WEB DESIGN**

COURSE OBJECTIVES

To enable the students to

- Define the principle of Web page design.
- Define the basics in web design
- Visualize the basic concept of HTML
- Visualize the working principle of multimedia
- To know about the basic concepts of CSS

Module-1 Web Design Principles

Basic principles involved in developing a web site, Planning process, Golden rules of web designing, Designing navigation bar, Page design, Home Page Layout, Design Concept.

Module-2 Basics in Web Design

Brief History of Internet, What is World Wide Web, Why create a web site, Web Standards, Audience requirement.

Module-3 Introduction to HTML

What is HTML, HTML Documents, Basic structure of an HTML document, Creating an HTML document, Mark up Tags, Heading-Paragraphs, Line Breaks, HTML Tags.

Module-4 Elements of HTML

Introduction to elements of HTML, Working with Text, Working with Lists, Tables and Frames, Working with Hyperlinks, Images and Multimedia, Working with Forms and controls.

Module-5 Introduction to Cascading Style Sheets

Concept of CSS, Creating Style Sheet, CSS Properties, CSS Styling(Background, Text Format, Controlling Fonts), Working with block elements and objects, Working with Lists and Tables

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the planning process, page design and overall concept in principles of web design
- Comprehend and analyze various structure of an HTML document
- Apprehend the HTML formats in reference models
- Downloadable lectures, code and design assets for the entire project
- Comprehend and analyze various CSS properties.

Paavai Nagar, Pachal,
Namakkal-637 018.

19BMVC401 **IOT**

COURSE OBJECTIVES

To enable the students to

- To acquaint with the basic concepts of embedded system product development cycle and modeling.
- To introduce IoT architecture reference model
- To introduce IoT architecture standards for different use case under discussion.
- To introduce IoT Network and channel aware communication Topologies and Hierarchy
- To acquaint with the various security concepts in IoT architecture

Module-1 Embedded system product development cycle

Challenges in embedded system design, Processor general purpose, customized, application specific-Embedded product life cycle-waterfall, successive refinement, spiral models.

Module-2 Formalisms in System modeling

Requirement analysis, Architectures, Data flow graph, state models, sequence diagram UML /sysml.

Module-3 IoT Architecture Reference Model (ARM)

Evolution of IoT, Need for ARM, Event-driven Architectures, Service oriented Architecture. IoT Domain Model, Information Model, Functional Model - Communication Model, Security Model. Need for cloud in IoT. Open source clouds and interfaces.

Module-4 IoT Communication Architecture

IoT nodes, IoT Edge, 6LOWPAN, ipv4/ipv6, MQTT, CoAP, Application aware communication, Network and channel aware communication Topologies and Hierarchy.

Module-5 IoT Architecture standards

ETSI standard for IoT Architecture : Standards for IoT for Home, Energy, People, motion, City

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Comprehend and analyze various embedded product development life cycle.

- Ability to model the embedded product modules.
- Comprehend and analyze Evolution of IoT, Need for ARM, Event-driven Architectures, Service oriented Architecture
- Apprehend the various network and channel aware communication Topologies and Hierarchy
- Comprehend and analyze IoT architecture reference model.

DEPARTMENT OF CHEMICAL ENGINEERING

VALUE ADDED COURSE ON

COATINGS AND PAINTS

Period: June 10th to 14th 2019

Venue: Temple Tower T-303

Course Coordinator

Dr.K.Gopi

Assistant Professor, Chemical Engineering

19CMVC501-COATINGS AND PAINTS

COURSE OBJECTIVES

To enable the students to gain knowledge on

- Chemistry of colloids
- Formulation of paints and machinery involved
- Powder coatings

Colloidal chemistry of coatings, surface chemistry of pigments, Pigment dispersion and wetting, flushing of pigments, effect of pigment volume concentration on paint properties, Paint additives, solvents, Basics of Paint formulations Machinery for grinding of pigments and extenders

Paint manufacturing machinery for pigment dispersion (Ball mill, Sand mill, Attritor mills, Drais mill, basket mill, kaddy mills, twin shaft dispenser, alpine mills, horizontal V/S vertical mils

Manufacture of Powder Coatings, dry distempers, cement paints, oil based distempers and paints, other stiff paints, putties, Manufacturing of alkyds, emulsions and hard resins, filtration of resins, paints, ultra filtration of ED resins, forming of hard resins, marking and labeling of packaged products.

TOTAL PERIODS	**30**

COURSE OUTCOMES

At the end this course, students will be able to

- Acquire the knowledge of colloidal chemistry.
- Understand paint formulations and machineries
- Learn types of coatings and their types

PRESERVATION OF FOOD MATERIALS

on June 03rd to 08th 2019

Venue: Temple Tower T-312

Course Coordinator

S.Saravanan

Assistant Professor, Chemical Engineering

19CMVC502-PRESERVATION OF FOOD MATERIALS

COURSE OBJECTIVES

To enable the students to gain knowledge on

- the area of Food Preservation.
- methods involved in food handling and storage
- applications of Super critical technology

Methods of Food Handling and Storage: Nature of harvested crop, plant and animal; storage of raw materials and products using low temperature, refrigerated gas storage of foods, gas packed refrigerated foods, sub atmospheric storage, Gas atmospheric storage of meat, grains, seeds and flour, roots and tubers; freezing of raw and processed foods.retort pouch packing, Aseptic packaging.

Thermal Methods: Newer methods of thermal processing; batch and continuous; In container sterilization-canning; application of infra-red microwaves; ohmic heating; control of water activity; preservation by concentration and dehydration; osmotic methods

Non-Thermal Methods: Super Critical Technology for Preservation – Chemical preservatives, preservation by ionizing radiations, ultrasonics, high pressure, fermentation, curing, pickling, smoking, membrane technology. Hurdle technology,

TOTAL PERIODS	**30**

COURSE OUTCOMES

At the end this course, students will be able to

- Outline the methods of preservation of food materials
- Demonstrate the process involved in food handling and storage
- Discuss the properties of food materials

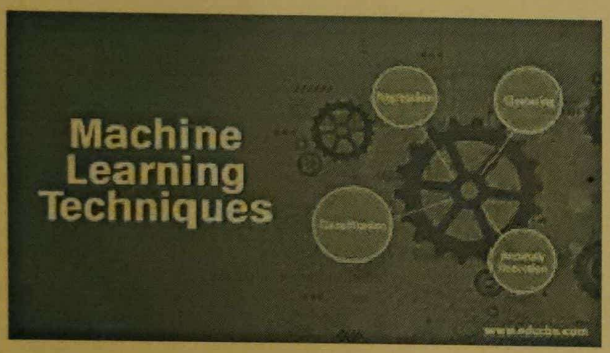
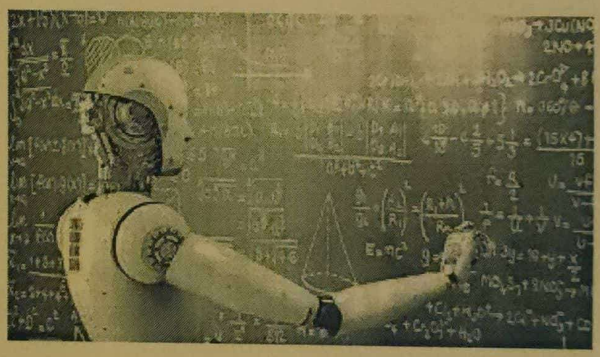
19ITVC301 & MACHINE LEARNING TECHNIQUES

Machine learning (ML) is a type of artificial intelligence (AI) that allows software applications to become more accurate at predicting outcomes without being explicitly programmed to do so. Machine learning algorithms use historical data as input to predict new output values.





COURSE CONTENT

- Introduction to Machine Learning
- Regression
- K-Nearest Neighbour

INTENDED AUDIENCE:

- **II Year of B.E/B.Tech Students**

Date: 10.06.19 to 14.06.19

COURSE COORDINATORS

Venue: Class Room no-M311

1. R.DEENADHAYALAN, AP/IT
2. P.ANITHA, AP/IT

19ITVC301 MACHINE LEARNING TECHNIQUES

COURSE OBJECTIVES

To enable the students to

- To understand about Introduction to Machine Learning
- To understand about the concept of regression
- To learn various type of classification methods including SVM, Naive bayes, decision tree, and random forest

Module 1 Introduction to Machine Learning

Applications of Machine Learning

Supervised vs Unsupervised Learning

Python libraries suitable for Machine Learning

Module 2 Regression

Linear Regression

Non-linear Regression

Model evaluation methods

Module 3 Classification

K-Nearest Neighbour

Decision Trees

Logistic Regression

Support Vector Machines

Model Evaluation

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- AnalyzeIntroduction to Machine Learning
- Identify about the concept of regression
- Implement classification methods including SVM, Naive bayes, decision tree, and random

forest

19ITVC401 & BUSINESS ANALYTICS

Business analytics, a data management solution and business intelligence subset, refers to the use of methodologies such as data mining, predictive analytics, and statistical analysis in order to analyze and transform data into useful information, identify and anticipate trends and outcomes, and ultimately make smarter.

COURSE CONTENT

- Introduction to terms like Business Intelligence
- Install R and the packages useful for the course,
- learn the use of IDE R Studio and Various GUI

INTENDED AUDIENCE:

- **II Year of B.E/B.Tech Students**

Date: 25.11.19 to 29.11.19
Venue: Class Room no-M311

COURSE COORDINATORS

1. M.PUSHPALATHA, ASP/IT
2. B.DEEPA, AP/IT

19ITVC401 BUSINESS ANALYTICS

COURSE OBJECTIVES

To enable the students to

- Understanding concepts around Business Intelligence and Business Analytics
- Apply various supervised machine learning techniques
- Use various packages in R to create fancy plots

Module 1

Introduction to terms like Business Intelligence, Business Analytics, Data, Information, how information hierarchy can be improved/introduced, understanding Business Analytics and R, knowledge about the R language

Module 2

Community and ecosystem, understand the use of 'R' in the industry, compare R with other software in analytics, Install R and the packages useful for the course,

Module 3

perform basic operations in R using command line, learn the use of IDE R Studio and Various GUI, use the ‘R help’ feature in R, knowledge about the worldwide R community collaboration.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand concepts around Business Intelligence and Business Analytics
- Apply various supervised machine learning techniques
- Use various packages in R to create fancy plots

TEXT BOOKS

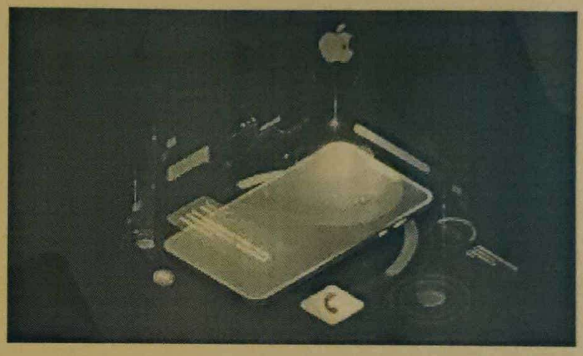
19ITVC501 & IOS DEVELOPMENT

IOS is a mobile operating system for Apple-manufactured devices. iOS runs on the iPhone, iPad, iPod Touch and Apple TV. iOS is best known for serving as the underlying software that allows iPhone users to interact with their phones using gestures such as swiping, tapping and pinching.



COURSE CONTENT

- MVP
- App Store Optimization (ASO)
- Growth hacking techniques

INTENDED AUDIENCE:

- **III Year of B.E/B.Tech Students**

Date: 03.06.19 to 08.06.19
Venue: Class Room no-M310

COURSE COORDINATORS

1. B.VENKATESAN, HOD/IT
2. S.SAKTHIVEL, AP/IT

19ITVC501 IOS DEVELOPMENT

COURSE OBJECTIVES

To enable the students to

- To Understand the concept of Optimizing the app store listing
- To describe about App Store Optimization
- To become familiar with MVP APP

Unit - I

Idea validation and MVP, App monetization models, Optimizing the app store listing - Growth hacking techniques for app downloads, How to get press coverage for your app- How to get your app featured on the app store.

Unit - II

App Store Optimization (ASO) how to rank on the app store search engine, How to use paid advertising to get more customers, Improving your app store ratings and reviews, App analytics, Black hat vs. white hat techniques for app marketing, How to build a app showcase website.

Unit - III

Idea validation and MVP App monetization models Optimising the app store listing Growth hacking techniques for app downloads How to get press coverage for your app How to get your app featured on the app store App Store Optimisation (ASO) how to rank on the app store search engine

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Implement concept of Optimizing the app store listing
- Demonstrate about App Store Optimization
- Implement MVP APP

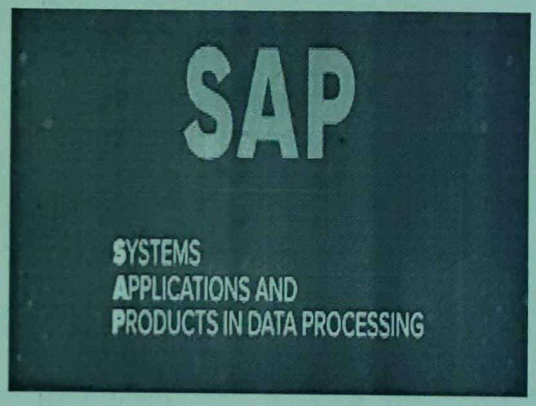
VALUE ADDED COURSE

19ITVC601 & SAP IN DATA PROCESSING

System Applications and Products in Data Processing (SAP) is the leading global provider of Enterprise Resource Planning (ERP) software. SAP software integrates all areas of business operations.



COURSE CONTENT

- Human Resource (HR)
- Material Management (SAP MM)
- Project System (SAP PS)

INTENDED AUDIENCE:

- **III Year of B.E/B.Tech Students**

Date: 25.11.19 to 29.11.19
Venue: Class Room no-M310

COURSE COORDINATORS

1. B.VENKATESAN, HOD/IT
2. S.SAKTHIVEL, AP/IT

19ITVC601 SAP IN DATA PROCESSING

COURSE OBJECTIVES

To enable the students to

- Understand and use constants and variables.
- Understand and use Swift arrays.
- Understand basic gesture controls and motion detection.

MODULES

Human Resource Management (SAP HRM)

Human Resource (HR)

Production Planning (SAP PP)

Material Management (SAP MM)

Financial Supply Chain Management (SAP FSCM)

Sales and Distribution (SAP SD)

Project System (SAP PS)

Financial Accounting and Controlling (SAP FICO)

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Demonstrate constants and variables.
- Analyze and use Swift arrays.
- Implement basic gesture controls and motion detection.

TEXT BOOKS

1.SAP S/4HANA, An introduction written by

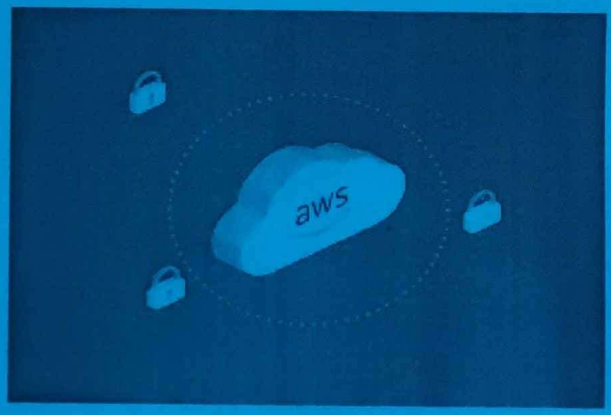
DEPARTMENT OF INFORMATION TECHNOLOGY

VALUE ADDED COURSE

19ITVC701 & AWS SECURITY.

AWS provides services that help you protect your data, accounts, and workloads from unauthorized access. AWS data protection services provide encryption and key management and threat detection that continuously monitor and protects your accounts and workloads.



COURSE CONTENT

- AWS Cognito,
- stop and terminate an EC2 Instance
- Amazon RDS and its benefits

INTENDED AUDIENCE:

- **IV Year of B.E/B.Tech Students**

Date: 03.06.19 to 08.06.19
Venue: Computer Lab

COURSE COORDINATORS

1. M.PUSHPALATHA, ASP/IT
2. B.DEEPA, AP/IT

19ITVC701 AWS SECURITY

COURSE OBJECTIVES

To enable the students to

- To learn about the different services provided by AWS
- To learn about AWS security
- To understand about RDS

Module 1:

User management through Identity Access Management (IAM), Various access policies across AWS Services, AWS Cognito, AWS Security & Encryption: KMS, CloudHSM, Sheild, and WAF, API keys service access, Best practices for IAM, Access billing and create alerts on billing.

Module 2:

Start, stop and terminate an EC2 Instance, Security Groups, AMI, VPC, ENI, Public, and Private IP, Storage services, Instance Store, EBS and its types, SSDs and Provisioned IOPS, Hard Disk Drives, EFS, EBS vs EFS, Cost optimization.

Module 3:

Amazon RDS and its benefits, Read Replica, RDS IAM Authentication, Aurora: Aurora Serverless& Global Databases, DynamoDB, ElastiCache: Working, Redis vs Memcached, Amazon RedShift: Redshift Spectrum

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Implement the different services provided by AWS
- Demonstrate AWS security
- Analyzeabout RDS

TEXT BOOKS

1.AWS: The Ultimate Guide From Beginners To Advanced For The Amazon Web Services (2020 Edition) Paperback – December 21, 2019

VALUE ADDED COURSE

19ITVC801 & ANDROID APP DEVELOPMENT

Android is an open source and Linux-based operating system for mobile devices such as smart phones and tablet computers. Android was developed by the Open Handset Alliance, led by Google, and other companies.

COURSE CONTENT

- Fundamentals
- Application Structure
- Launching emulator

INTENDED AUDIENCE:

- **IV Year of B.E/B.Tech Students**

Date: 25.11.19 to 29.11.19
Venue:Computer Lab.

COURSE COORDINATORS

1. S.SARAVANA KUMAR, AP/IT
2. V.SARAVANA BHAVAN, AP/IT

19ITVC801 **ANDROID APP DEVELOPMENT**

COURSE OBJECTIVES

To enable the students to

- Understand introduced to Android programming and learn to develop Android applications
- Understand Android development tools, creating user interfaces, and utilizing location based services
- Understand able to write simple GUI applications, use built-in widgets and components

Module 1

Fundamentals -Basic Building blocks – Activities, Services, Broadcast Receivers & Content providers - UI Components- Views & notifications -Components for communication -Intents & Intent Filters - Android API levels(versions & version names)

Module 2

Application Structure - AndroidManifest.xml - uses-permission -Activity/services/receiver declarations -Resources & R.java - Layouts &Drawable Resources - Activities and Activity lifecycle

Module 3

Emulator - Launching emulator -Editing emulator settings - Emulator shortcuts -Logcat usage - Introduction to Android Device Monitor (ADM)

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand introduced to Android programming and learn to develop Android applications
- Understand Android development tools, creating user interfaces, and utilizing location based services
- Understand able to write simple GUI applications, use built-in widgets and components

DEPARTMENT OF FOOD TECHNOLOGY

conducts

VALUE ADDED COURSE ON

AQUA FOOD TECHNOLOGY

Date: 01.07.2019 to 05.07.2019

Venue: Temple Tower T-204

Course Coordinator

J.S.Ruthrapriya

Assistant Professor, Food Technology

19FTVC01	AQUA FOOD TECHNOLOGY

COURSE OBJECTIVES

To enable the students to

- outline the main international fisheries resources and their level of exploitation
- identify the fisheries resources produced from aquaculture, including fish and invertebrates
- To understand social aspects and environmental impact of aquaculture

Unit I

Overview importance's of coastal and freshwater aquaculture, global scenario, present status in India - prospects and scope.

Unit II

Selection of site: topography, water availability, soil conditions, design and layout, structure and construction. Preparation of ponds – different methods for the eradication of weed fishes, predators, aquatic insects and aquatic weeds.

Unit III

Selection of cultivable Species- Finfishes, Shellfishes and Seaweeds. Seed selection protocol and seed availability – wild source, hatchery source. Live feed culture – artemia, rotifer and microalgae. Water Quality Management.

	TOTAL PERIODS	**30**

COURSE OUTCOMES

At the end this course, students will be able to

- outline the social and economic importance of fish as a source of food
- To impart knowledge on macro and trace constituents and nutritive value of fish.
- To give a detailed insight into handling, fish preservation techniques and quality management systems for seafood

TEXT BOOKS

VALUE ADDED COURSE ON

MODERN FOOD PROCESSING AND PRESERVATION TECHNIQUES

on November 25th to 29th 2019

Venue: Temple Tower T-203

Course Coordinator

P.N.Gururaj

Assistant Professor, Food Technology

19FTVC02	MODERN FOOD PROCESSING AND PRESERVATION TECHNIQUES	
COURSE OBJECTIVES		
To enable the students to		
• Apply the techniques of objective and subjective methods of evaluating foods		
• Know the basic concepts of food processing & recent trends in processed foods		
• Understand the principles of the various Food Processing Methods		
Unit I		
Preservation and Processing Importance of preservation and processing of sea foods criteria for assessing freshness handling of fresh materials – on board handling, chilling methods, phenomena of rigor mortis, spoilage changes – causative factors		
Unit II		
Drying and irradiation Drying and dehydration – conventional and modern methods, relative merits and demerits. Quality changes during drying and storage – functional properties, sensory quality, nutritional value, quality indices, storage life.		
Unit III		
Freezing and cold storage – process of freezing, types, quality changes during processing and storage. Canning – procedures, quality changes during processing and storage – quality standards. Role of preservatives in processing.		
	TOTAL PERIODS	**30**
COURSE OUTCOMES		
At the end this course, students will be able to		
• To encourage students to work in conjunction with relevant food industry to get a deeper insight into the subjects of Food Science and Technology		
• To impart students a systematic approach to basic and applied aspects of food processing and technology		
• To familiarize students with the various theoretical and practical aspects of food quality and its control.

DEPARTMENT OF PHARMACEUTICAL TECHNOLOGY

VALUE ADDED COURSE ON

IMPORTANCE OF MEDICINAL PLANTS AND ITS BIOCHEMICAL VALUES

on July 1st to 05th 2019

Venue: Temple Tower T-211

Course Coordinator

T.Senthil kumar

Assistant Professor, Pharmaceutical Technology

19PTVC01	IMPORTANCE OF MEDICINAL PLANTS AND ITS BIOCHEMICAL VALUES	
COURSE OBJECTIVES		
To enable the students to		
• To learn about phytochemistry of medicinal plants		
• Understand the concepts of phytochemistry		
• biological activities of medicinal plants		
Unit I		
Extraction – purification of bio-active compounds from plants – cold & hot extraction – Soxhlet extraction – crude extracts purification by various solvents.		
Unit II		
Isolation of bioactive compounds – chromatographic techniques – thin layer chromatography – liquid chromatography – HPLC and UPLC.		
Unit III		
Structural analysis of bioactive compounds – IR spectroscopy – Mass spectrometry – NMR spectroscopy.		
	TOTAL PERIODS	**30**
COURSE OUTCOMES		
At the end this course, students will be able to		
• Able to appreciate the medicinal values of plants		
• Familiarize the bio-active components present in the plants		
• Know the various techniques involved in the phytochemistry		
TEXT BOOKS		
1. Godte V.M. 2000. Ayurvedic pharmacology and therapeutic uses of medicinal plants, Bharathiya Vidya Bhavan, Mumbai

VALUE ADDED COURSE ON

BASIC CLINICAL LABORATORY TECHNIQUES

on November 25th to 29th 2019

Venue: Temple Tower T-211

Course Coordinator

U.Meenakshi

Assistant Professor, Pharmaceutical Technology

19PTVC02	BASIC CLINICAL LABORATORY TECHNIQUES	
COURSE OBJECTIVES		
To enable the students to		
• To demonstrate the basic requirements of clinical laboratory, external quality assurance and internal quality assurance.		
• To impart skills on sampling, laboratory analysis and disposal of wastes.		
• To impart knowledge on standards and interpretation of diagnostic values.		
Unit I		
Specimen collection and handling, transportation of specimens, disposal of specimen after laboratory use. Composition of blood. Methods of estimation of Haemoglobin, PCV, total and differential count of WBC, platelet count, clotting, bleeding and prothrombin time.		
Unit II		
Blood Group - methods of grouping and Rh factor. Determination of proteins in serum and plasma. Determination of glucose, glycated hemo globin, triglycerides, cholesterol, lipoproteins.		
Unit III		
Examination of body fluids - ascitic fluid, pleural fluid, synovial fluid, pericardial fluid, CSF and amniotic fluid.		
	TOTAL PERIODS	**30**
COURSE OUTCOMES		
At the end this course, students will be able to		
• Understand the basic concepts of specimen collection, transportation and disposal of specimens.		
• Apprehend the examination of body fluids such as ascitic fluid, pleural fluid, synovial fluid etc.		
• Interpret the presence of abnormal constituents in urine, detection of occult blood and semen analysis.

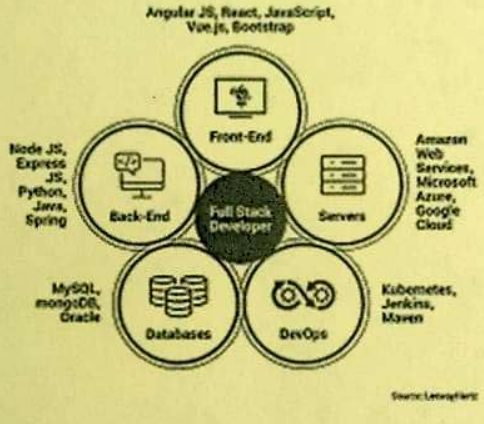
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Value Added Course

19PCEVC101 - FULL STACK DEVELOPMENT

Full stack development refers to the development of both front end (client side) and back end (server side) portions of web application. They work on the frontend, backend, database and debugging of web application or websites. This end-to-end system requires many ancillary technologies such as the network, hardware, load balancers, and firewalls.



INTENDED AUDIENCE

- I, II – Year M.E, M. Tech Students

Date: 21.08.2019 to 26.08.2019

Venue: Class Room No: Ground Floor Computer Lab

COURSE CO-ORDINATOR

P. Renugadevi, AP/CSE

19PCEVC101 **FULL STACK DEVELOPMENT**

COURSE OBJECTIVES

To enable the students to

- know the concept of javascript development script.
- understand HTML/CSS suite.
- concept on node Js training.

Module 1: JavaScript Development Suite

- Fundamentals Of JavaScript
- JavaScript for Beginning Web Developers
- JavaScript for Absolute Beginners
- Fundamentals of jQuery
- Fundamentals of Ajax Development
- Create a node.js Real Time Chat Application
- Advanced JavaScript

Module 2:All-In-One HTML/HTML5 And CSS/CSS3 Suite

- All-In-One HTML/HTML5 And CSS/CSS3 Suite
- Applying Designs to WireFrames with HTML5 and CSS3
- Build Your Own HTML5 Video Player
- Building Responsive Websites with HTML5 and CSS3
- HTML5 and CSS3 Site Design
- HTML5 Mobile Game Development by Example – Educational Game
- HTML5 Mobile Game Development by Example -Veggies vs Zombies
- Make HTML5 Games with No Coding Required

Module 3: Node.Js Training

- Introduction and Foundation
- Node Projects
- Working with shrink-wrap to lock the node modules versions
- Working with asynchronous programming
- Building a HTTP Server with Node.JS using HTTP APIs
- File System
- Buffers, Streams, and Events
- Multi-Processing in NodeJS

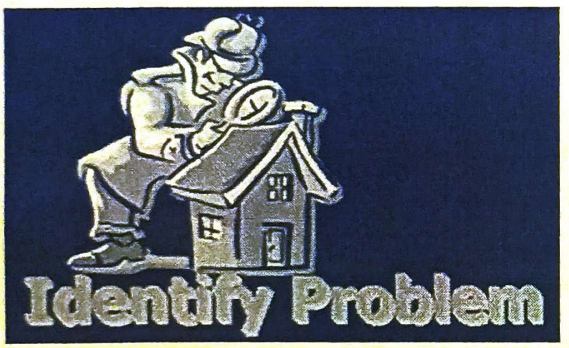
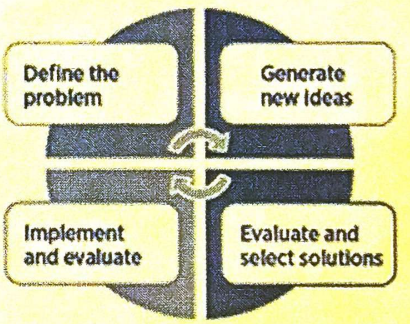
PROBLEM DEFINITION AND IDENTIFICATION





Date: 28.01.2019 to 01.02.2019

Course Co-ordinator: Mrs.R.Mohanapriya

Venue: M212

19PCOVC101 **PROBLEM DEFINITION AND IDENTIFICATION**

COURSE OBJECTIVE

To enable the students to

- understand the problem and literature survey.
- identify and analyze each problems System Simulation.

Unit I **Problem Definition** **15**

Objectives, Motivation, Utility. Concept of theory, empiricism, deductive and inductive theory. Characteristics of scientific method – Understanding the language of research – Concept, Construct, Definition, Variable. Research Process.

Unit II **Problem Identification** **15**

Identify the problem maintaining the conditions around the problem-Select methods for assessment-Collect data - Review and analyze the data-hypothesized solution for an intervention

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- to analyze the problems through literature survey.
- to identify the problems and hypothesized solution for an intervention.

TEXT BOOK & MANUALS

1. Bergan, J. R. (1995). Evolution of a problem-solving model of consultation. Journal of Educational and Psychological Consultation, 6, 111-123.

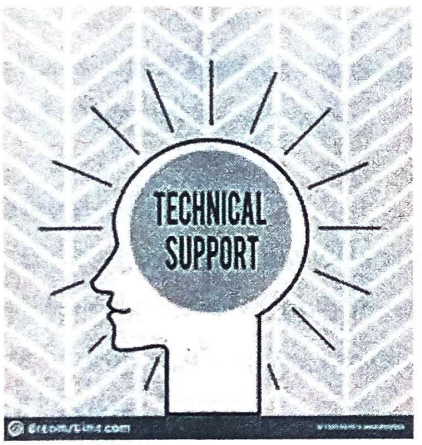
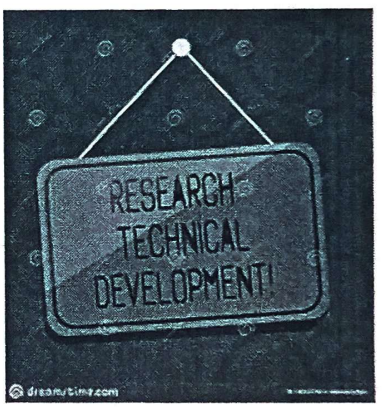
PATENT WRITING AND PUBLISHING





Date: 17.09.2018 to 21.09.2018

Course Co-ordinator: Mr.V.Joel Ebnezer

Venue: M212

18PCOVC101 **PATENT WRITING AND PUBLISHING**

COURSE OBJECTIVE

To enable the students to

- formulate the research problems
- understand writing the patent and publishing the patent.

Unit-Introduction to formulating research problems **15**

Defining and formulating the research problem, selecting the problem, necessity of defining the problem, Importance of literature review in defining a problem, literature review-primary and secondary sources, reviews, monograph, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, development of working hypothesis

Unit II – Report writing and publications **15**

Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report-Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports, copy right, royalty, trade related aspects of intellectual property rights (TRIPS); scholarly publishing-IMRAD concept and design of research paper, citation and acknowledgement, plagiarism, reproducibility and accountability.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- identify research problems and literature review.
- patent report writing and designing the research papers.

TEXT BOOK

1. Trochim, W.M.K., 2005. Research Methods: the concise knowledge base, Atomic Dog Publishing. 270p.

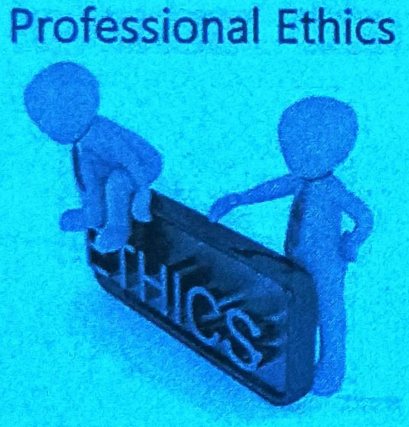
ETHICAL AND PROFESSIONAL RESPONSIBILITY



Date: 10.06.2019 to 14.06.2019

Course Co-ordinator: Dr.S.Vijayakumar

Venue: Online

19PCOVC301 **ETHICAL AND PROFESSIONAL RESPONSIBILITY**

COURSE OBJECTIVE

To enable the students to

- know the social responsibilities and public relations
- learn the actual reality of how lawyers work out conflicts among the ethics of duty and the ethics of aspiration

Unit-I- ETHICAL AND PUBLIC RELATIONS **15**

Introduction to Social Responsibility & Ethics, Public Relations and Ethics of Speech, Public Relations and Libel, Public Relations and Harm Public Relations and Your Property, Ethic, Frameworks

Unit II – THE REQUIREMENT OF LOYALTY TO THE CLIENT **15**

Representing Multiple Parties Dealing with Each Other, The Duty of Loyalty, Conflict Between Client Interest and the Lawyer's Personal Interest, Representing the Insured and the Insurer, Special Problems of Government Lawyers

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- gain knowledge of social responsibilities and public relations.
- gain knowledge of conflicts among the ethics of duty and aspiration.

19PEDVC01-SOLAR POWER PLANT DESIGN

ABOUT THE COURSE:

The objective of this course is to provide the candidates the Detail knowledge and skills in Solar Power Plant Design, Engineering, and O & M to facilitate faster learning curves while on the job.

INTENDED AUDIENCE:

1. I and II year PG students those interested in plant design.
2. Those wants to know the design procedure of solar plant panels.
3. Those wants to apply the design concept in solar plant design.

DURATION OF THE COURSE:

Period: 26.08.2019 to 30.08.2019

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. calculate panel area required for the needed power output.
2. apply the concept in designing of various range of power panels.

COURSE CO-ORDINATOR:

Mr. P.PUGALENTHI, AP/MECH

VENUE:

Seminar Hall,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 23.08.2019.

Scanned by CamScanner

19PEDVC01 SOLAR POWER PLANT DESIGN

COURSE OBJECTIVES

To enable the students to

- know the basic concept power consumption.
- know the need of solar power plant design.
- understand the concept designing the solar power Plant and the elements needed for designing.

1. **Types of Solar Power Plant** (6)

   Grid Connected solar Power Plant, Grid interactive solar power plant, Net Metering Solar Power Plant, Off-Grid / Hybrid solar power , plant Schemes of solar power plant

2. ***2.*** **Selection of PV module technology** (6)

   Introduction, Crystalline technology, Thin film technology,Bi-facial technology,Comparison between PV module technology,Comparison between solar power plant energy out put

3. ***3.*** **Selection of PV module (cells and BOM) and sizing** (6)

   Types Crystalline module cells, Manufacturing process of PV cells, Comparison between mono crystalline Selection of PV cells, Selection of front and rear sheet, Selection of PV module glass

4. **Inverters Selection and Sizing (Grid Connection and Off Grid)** (6)

   Factors affecting plant location, factors in planning layouts, principles of plant layout, use of scale models.

5. **Connection of PV Module(Series and Parallel Circuit** **(**6)

   Series Circuits, Parallel Circuits, Combining Series & Parallel Circuits,PV module string connection Matching the PV Array ToThe Voltage Specifications of An Inverter, Matching the PVArray to the Inverter's Current Rating, Matching the PVArray to the Inverter's Power Rating Summary of Calculations for Matching Array and Inverter

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of solar power plant over other sources.
- Apply the concepts for making plant designing for an industry and domestic appliances.
- Represent the designing structure of the plant.

TEXT BOOKS

19PEDVC02-CREO ADVANCED

ABOUT THE COURSE:

This course aims to help product designers and engineers in developing a product design virtually. CREO is equipped with all the capabilities that are required for completing a product design. This course in CREO will help in sketching, modeling, validation of design, and visualize the product design.

INTENDED AUDIENCE:

1. I and II year PG students those interested in product design.
2. Those wants to know the design procedure of product by CREO software
3. Those wants to apply the design concept in real time application.

DURATION OF THE COURSE:

Period: 23.12.2019 to 27.12.2019

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. add manufacturing businesses transition into model-based enterprises.
2. do better concept design, increase engineering & manufacturing capabilities, do better simulation and additive manufacturing.

COURSE CO-ORDINATOR:

Mr. J.MAHENDRAN, AP/MECH

VENUE:

Seminar Hall III,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 16.12.2019.

Scanned by CamScanner

19PEDVC02 **CREO ADAVANCED**

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling and analysis of mechanical components.

INTRODUCTION

Introduction to CAD, CAE Features of Creo, Concepts:-Modeling ,Parametric , Associative , Feature based Creo Graphical User Interface - Feature manager design tree, , Handles, mouse buttons, keyboard shortcuts, Understanding the Windows Menu Hardware and Software requirements

SKETCHER WORKBENCH

Sketch Entities – Inference line, Centerline line, Line, Circle, Arc, Ellipse, Rectangle, Slots, Polygon, Parabola, Ellipse, Partial Ellipse, Spline, Spline tools, Spline on surface, Equation driven curve, Points, Text, Construction geometry, Snap, grid,

PART MODELING

Creating reference planes Creating Extrude features – Direction1, Direction2, From option, Thin feature, Applying draft, Selecting contours Creating Revolve features – Selecting Axis, Thin features, Selecting contours Creating Swept features-Selecting, Profile and Path, Orientation/twist type, Path Alignment, Guide Curves, Start/End tangency, Thin feature

ASSEMBLY DESIGN

Introduction to Assembly Modeling & Approaches – Top down and Bottom up approach Applying Standard Mates- Coincident, Parallel, Perpendicular, Tangent, Concentric, Lock, Distance, Angle.

DRAFTING AND DETAILING

Inserting Annotations - Datum Features, Geometric Tolerance, Surface Finish, Jog Leaders, Hole Callout, Datum Target, Dowel Pins, Area Hatch, Cosmetic Thread, Balloon, Centre Mark, Centre Lines, Layers, Working With Tables, Bill Of Materials, Hole Table, Sheets And Templates, Sheet Format.

TOTALPERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

TEXT BOOK & MANUALS

ARTIFICIAL NEURAL NETWORKS

Course Duration: 01.08.2019-05.08-2019

Venue: PEC-Temple Tower -T212

Course Coordinator: Dr.A.Rathinam Prof/EEE

19PPSVC101 ARTIFICIAL NEURAL NETWORKS

COURSE OBJECTIVES

To enable the students to

- explore the architecture and learning principles of Neural Networks.
- develop the various hybrid algorithms involved in Neural Networks.
- provide adequate knowledge of application of Neural Networks to real time systems.

UNIT I ARTIFICIAL NEURAL NETWORKS 10

Biological Neurons and Neural Networks, Basic Structures and Properties of Artificial NeuralNetworks, Basic Neuron Models-McCulloch-Pitts –Different Activation Functions,Singe Layer Perceptrons-Linear Seperability, Single Layer Perceptron Architecture-Learning rule, Algorithm, Applications.

UNIT II BACK PROPAGATION NEURAL NETWORKS 10

Multi-Layer Perceptron -Architecture, activation functions, Learning, Back PropagationAlgorithm – Practical considerations - Limitations–Network Paralysis, Local Minima, Temporal Instability – Deep learning- introduction, Networks Classes .

UNIT III NETWORK BASED ON COMPETITION 10

Fixed weight competitive Network-Maxnet, Mexican Hat andHamming Net, Counter Propagation Networks-Kohonen's self-organizing map – Training theKohonen layer – Training the Grossberg layer – Full counter propagation network .

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Apply the concept of neural networks in practical applications.
- Design, implement and analyze the performance of Back Propagation and Deep Neural Networks
- Solve real world problems using Associative Neural Network Techniques

NETWORK ROUTING ALGORITHMS

Course Duration: 25.01.2020-30.01-2020

Venue: PEC-Temple Tower –Power Electronics lab

Course Coordinator: Dr. G.Balaji Prof/EEE

19PPSVC201 NETWORK ROUTING ALGORITHMS

COURSE OBJECTIVES

To enable the students to

- get familiarized with different protocols in internet routing and optical WDM networks
- get acquainted with the concepts of supporting protocols in Mobile-IP networks.
- differentiate the routing processes involved in mobile ad-hoc networks and wireless sensor networks from conventional networks.

UNIT I ROUTING IN TELEPHONE NETWORKS AND INTERNET 10

General Classification of routing, Routing in telephone networks, Dynamic Non-hierarchical Routing (DNHR), Trunkstatus map routing (TSMR), Real-Time Network Routing (RTNR), Hierarchical routing.Exterior Routing Protocols: Exterior Gateway Protocol (EGP) and Border Gateway Protocol (BGP).

UNIT II ROUTING IN OPTICAL WDM NETWORKS 10

Classification of RWA algorithms, RWA algorithms, Fairness and Admission Control, Distributed Control Protocols,Permanent Routing and Wavelength Requirements, Wavelength Rerouting- Benefits and Issues, Light path Migration, Rerouting Schemes, Algorithms- AG, MWPG.

UNIT III ROUTING IN MOBILE - IP NETWORKS 10

Macro-mobility Protocols, Micro-mobility protocol: Tunnel based: Hierarchical Mobile IP, Intra domain Mobility Management, Routing based: Cellular IP, Handoff Wireless Access Internet Infrastructure (HAWAII).

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify various routing schemes and their applications to the real world circuit-switched networks
- Compute the blocking probability of various routing schemes.
- Explore the characteristics of mobile ad hoc networks

19PTSVC391 SOFTWARE AND COGNITIVE RADIO SYSTEMS

COURSE OBJECTIVES

To enable the students to

- apply and implement the design methodologies in the wireless applications
- learn about software defined radio and cognitive radio systems.
- provide adequate knowledge of Cognitive Radio Systems

UNIT I SOFTWARE RADIO **10**

Evolution- architecture perspectives- Software radio concepts-SDR front end technology: Transmitter specifications-Receiver specifications- operating frequency bands- receiver design considerations-transmitter design considerations- Candidate architecture for SDR- Multimode SDR architecture

UNIT II COGNITIVE RADIO **10**

Introduction to cognitive radios –economics of cognitive radio-spectrum awareness, spectrum subleasing, spectrum sharing- cognitive networks: motivation &requirements-foundation &related works in cognitive radio- cognitive radio implementation.

UNIT III COGNITIVE RADIO APPLICATIONS **10**

Cognitive radios in wireless communication- Mobility management- location estimation & sensing-UWB Cognitive radio.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Design the architecture of Software and Cognitive Radio Systems
- Analyze the performance of Cognitive Radio Systems.
- Identify the applications of Cognitive Radio Systems

TEXT BOOKS

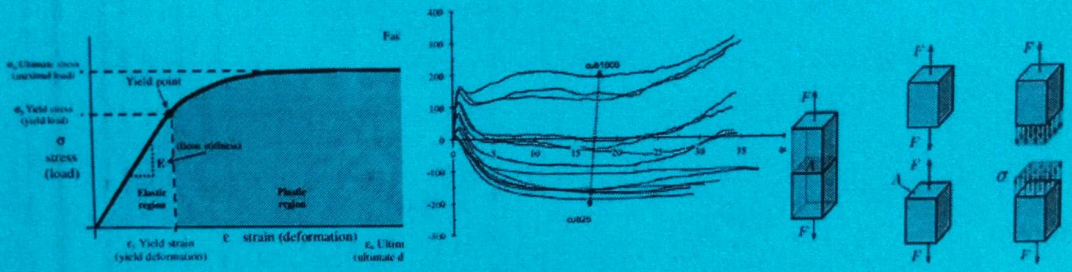
Value Added Course

19PSEVC101 - MECHANICS OF MATERIALS 1: FUNDAMENTALS OF STRESS & STRAIN AND AXIAL LOADING



- This course explores the topic of solid objects subjected to stress and strain. The methods taught in the course are used to predict the response of engineering structures to various types of loading, and to analyze the vulnerability of these structures to various failure modes. Axial loading with be the focus in this course.
- This course will also include topics such as stress and strain fundamentals, Stresses on inclined planes, Stress concentrations, Mohr's circle for plan strain and measuring strains, Stress-Strain diagrams, Material properties, Shear stress and shear strain.

Date : 27.08..2019 to 31.08.2019

Venue: T226

Course Incharge:

Mr.N.Moorthi AP/Civil

19PSEVC101 MECHANICS OF MATERIALS I: FUNDAMENTALS OF STRESS & STRAIN AND AXIAL LOADING

COURSE OBJECTIVES

To enable the students to

- Understand the concepts of stress strain fundamentals of materials

Stress and Strain Fundamentals

General Analysis Approach -Internal Forces due to External Loads -Normal Stress/Shear Stress - Maximum Normal and Shear Stress on Inclined Planes for Uniaxial Loading -General State of Stress at a Point (3D) -Two-Dimensional (2D) or Plane Stress - Nominal (Engineering) Stress and True Stress - Normal Strain

Stress-Strain Diagrams, Material Properties, and Shear Stress and Strain

Tension Test and Stress-Strain Diagram - Internal Properties and Hooke's Law - 0.2% Offset Yield Stress - Strain Hardening/Permanent Set - Poisson's Ratio - Shear Stress/2D Pure Shear - Shear Strain

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Calculate of stress strain fundamentals of materials

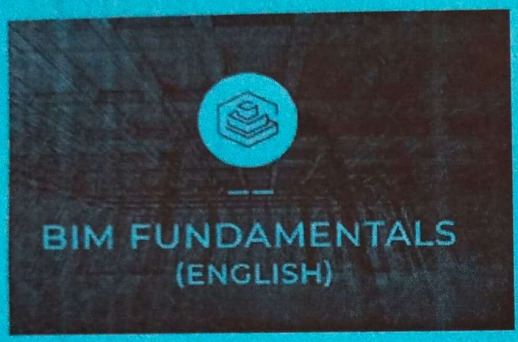
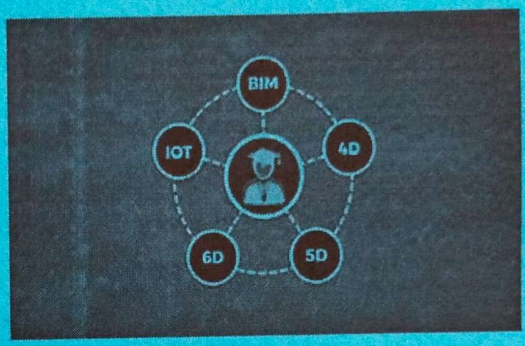
19PSEVC201 - BIM FUNDAMENTALS FOR ENGINEERS





- The course BIM also known as building information modeling is designed for students to learn the essential concepts of BIM, and the basic technical skills to create and manipulate a BIM model. Those skills include how to retrieve information from a BIM model and how to use common modeling tools.
- Integrated workflow that enables architects, engineers, and builders to explore a project digitally before it is built, creation and use of coordinated, internally consistent, computable information about a building project, Digital representations of the building components that followparametric rules, which can be manipulated in an intelligentfashion.

Date :23.12.2019 to 28.12.2019

Venue: T229

Course Incharge:

Mr.M.Rajkannan, AP/Civil

19PSEVC201 **BIM FUNDAMENTALS FOR ENGINEERS**

COURSE OBJECTIVES

To enable the students to

- learn BIM concepts in construction

Fundamental BIM Knowledge

Definition of BIM- From CAD to BIM- Necessity of BIM -BIM Benefits- LOD in BIM-Revit: View controls - pan, zoom, rotate, and arrange views- Visibility of elements -Section a 3D view - Retrieve information from schedules- Measure distance in BIM models

Modeling a BIM model

Revit: Use the Grid tool to place grid lines - Use the Level tool to define a vertical height -Use the Topo surface tool to create topographic surface- Use the Column tool to place a column- Use the Beam tool to place a beam -Use the Floor tool to create a floor- Use the Wall tool to create a wall -Use the Door tool to place a door-Use the Window tool to place a window- Use the Stair tool to create a stair - Use Ramp tool to create a parking ramp

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply BIM procedure in construction

TEXT BOOKS

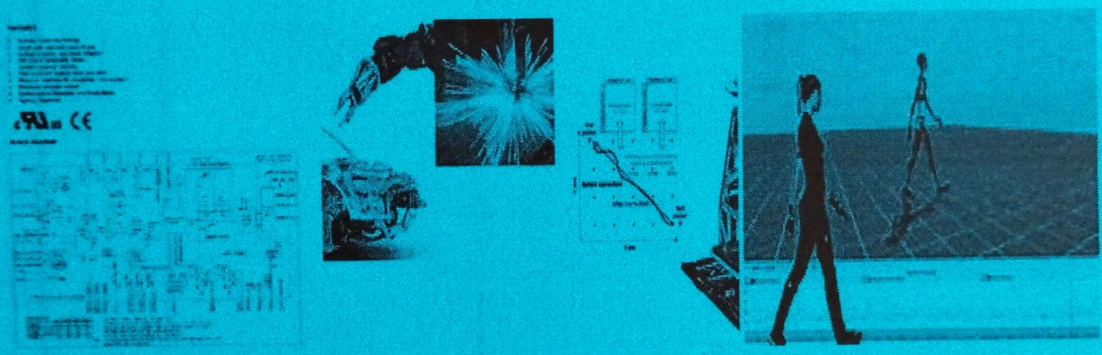
NAMAKKAL -637 018

DEPARTMENT OF STRUCTURAL ENGINEERING

Value Added Course

19PSEVC301 - ADVANCED ENGINEERING SYSTEMS IN MOTION



- This course is an advanced study of bodies in motion as applied to engineering systems and structures. We will study the dynamics of rigid bodies in 3D motion.
- This course will consist of both the kinematics and kinetics of motion. Kinematics deals with the geometrical aspects of motion describing position, velocity, and acceleration, all as a function of time. Kinetics is the study of forces acting on these bodies and how it affects their motion.
- Velocities in Moving Reference Frames; Accelerations in Moving Reference Frames; The Earth as a Moving Frame, Translational and Rotational Transformations of Inertial Properties; Principal Axes and Principal Moments of Inertia, 3D Impulse-Momentum Principles; 3D Work-Energy Principles is discussed here.

Date : 10.06.2019 to 14.06.2019

Venue: T226

Course Incharge:

Ms.S.Rajeshwari AP/Civil

19PSEVC301 ADVANCED ENGINEERING SYSTEMS IN MOTION

COURSE OBJECTIVES

To enable the students to

- Understand the properties of engineering systems in motion

Velocities in Moving Reference Frames; Accelerations in Moving Reference Frames; The Earth as a Moving Frame

velocities expressed in Moving Frames of Reference - Solve for Velocities Expressed in Moving Frames of Reference - Accelerations expressed in Moving Frames of Reference- Solve for the Velocity and the Acceleration for Bodies Undergoing 3D Motion and Expressed in Moving Frames of Reference Equations of Motion for a Particle Moving Close to the Earth -Solve a Problem for the Motion of Particles Moving Close to the Earth

Translational and Rotational Transformations of Inertial Properties; Principal Axes and Principal Moments of Inertia

Translational Transformation of Inertial Properties - Rotational Transformation of Inertial Properties - Rotational Transformation of Inertial Properties (cont) -Define Principal Axes and Principal Moments of Inertia - Determine Principal Axes and Principal Moments of Inertia -Solve for Principal Axes and Principal Moments of Inertia with an Example

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Determine Principal Axes and Principal Moments of Inertia

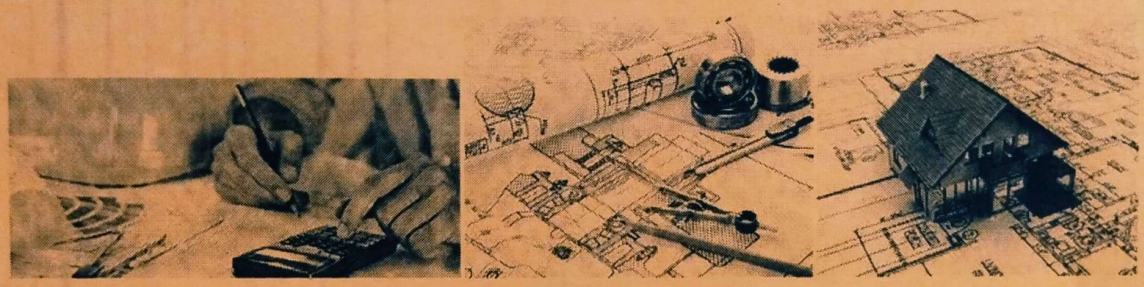
DEPARTMENT OF STRUCTURAL ENGINEERING

Value Added Course

PSEVC401 - QUANTITY SURVEYING



- This course is all about quantity takeoff and detailed BOQ preparation after reviewing the project documents and understanding the scope of work which is a very good introduction to construction estimating and project pricing.
- This course also covers topics such as learning quantity takeoff and measurements from zero, presenting your quantities in an undeniable / unarguable manner (very helpful in case of variations), The units of measurement of each BOQ item and where it can be found and quantified from the drawings, project drawings and understand the scope of work that should be accounted for in the BOQ.

Date : 25.11.2019 to 29.11.2019

Venue: T225

Course Incharge:

Mrs.B.Saranya AP/Civil

19PSEVC401 **QUANTITY SURVEYING**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on building Estimation & understand the concepts of preparation of BOQ

Introduction to building cost estimation- Measurement procedures - Mensuration – Specifications- Rates – Labour, material, machine.Finding quantities from construction drawing –Excavation - Ground work and Foundation - Superstructure- Walls, partitions, floors, roofs- Internal finishes - Doors and windows – Staircases -General approach to measurements of building services - External work- Bill of quantities – Abstract and BOQ

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply knowledge on calculation of building cost

TEXT BOOKS

1. Estimation and Costing book by M. Chakraborti ,M. Chakraborti publications, 2011

CRM IN E- BANKING

Date: 5.07.2019 to 10.07.2019

Venue: classroom

COURSE INCHARGE

1. J.ISWARYA, PROFESSOR/MBA

HEAD OF THE DEPARTMEN
Management Studies
PAAVAI ENGINEERING COLLEGE
VALLIYAMMAI NAGAR, PACHAL (Po) Namakkal - 637

19BAVC101 **CRM IN E- BANKING**

COURSE OBJECTIVES

To enable the students to

- To develop an appreciation about the utility of E-Banking practices
- To understand the quality services of E-banking and various tools of E-banking
- To evaluate the challenges in CRM with E-Banking and security issues of online BankinG

COURSE CONTENT

Unit I Introduction to CRM Definitions – Need and importance of CRM in present scenario – CRM as a strategic marketing tool.

Unit II Significance of CRM in banking today Meaning and concept of E-Banking – Advantages customer information Database – objectives of E-Banking – Customer facilities through E-Banking tools.

Unit III CRM Practices Importance of CRM through E-Banking – internal facilities, costs, quality of service and cost of communication Faculty of Arts Department of Commerce

Unit IV E- Payment system Rupay – Rupay secure – IMPS – National unified USSD platform – (USSD) National Automated Clearing House (NACH) – National Financial Smith (NES) RTGS, NEFT. Innovative banking Payment system.

Unit V Security Issues in CRM and E- Banking Security and Privacy, Transactional difficulty, Technical issues and Level of Customer awareness.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the important concepts in Customer Relationship Management
- Master over e-banking and data base services day today
- Evaluate the security issues in CRM and e-banking

TEXT BOOKS

1. Himani Sharma, 2011. Bankers Perspectives on E-Banking and Its Challenges, Evidence from North India.

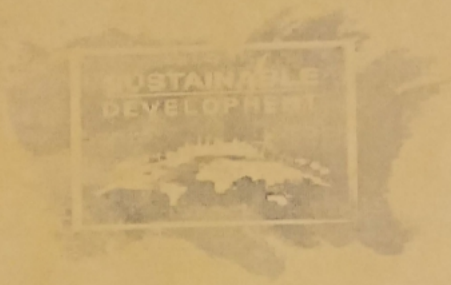
SUSTAINABLE DEVELOPMENT



Date: 16.08.2019 to 21.08.2019

Venue: classroom

COURSE INCHARGE

1. **P.DHIVYA,** PROFESSOR/MBA

HEAD OF THE DEPARTMENT
Management Studies
PAAVAI ENGINEERING COLLEGE
VH-7, PACHAL (Po) Namakkal -637

19BAVC201 SUSTAINABLE DEVELOPMENT

COURSE OBJECTIVES

To enable the students to

- Understand the basic concept of sustainable management the environmental, social and economic dimensions.
- Know the history of the sustainable development idea.
- Be able to discuss the conflicts which are involved in the SD concept on the national as well as on the global scale.

COURSE CONTENT

Unit I Introduction Fundamentals of Environment Status of environment - Environmental, social and economical issues - Need for sustainability - Nine ways to achieve sustainability - Linkage between population, resources, development and environment.

Unit II Sustainable Concept Concept of sustainability - factors governing sustainable developmentlinkages among sustainable development - Environment and poverty - Determinants of sustainable development.

Unit III Sustainable Development Goals UN sustainable development goals -causes and potential consequences of climate change and their relationship to SDG. Environmental finance - Eco marketing - green advertisement - organic products - issues in marketing of organic products - Eco - tourism - Natural resource conservation and management.

Unit IV Organisational Social Responsibility Corporate / Organisation Social Responsibility - sustainability strategy development - management tools for sustainable development - sustainable / ethical investment accounts - sustainable product development and design - conflict between farming and the environment.

Unit V Organisations in SD Environmental impact assessment - participants in environmental management - approaches to environmental management - approaches to environmental management - emerging environmental issues - Role of international organisations, national and local governments, environmental organisation industry and commerce and non-government organisation.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Further develop the ability of students to integrate and make autonomous use of their knowledge to sustain the environment.
- Develop the students ability to deal with complex phenomena, issues and situations of sustainable development.
- Develop the students potential towards, sustain the environment for professional activities that demand considerable autonomy or for research and development work.

19BAVC301 MACHINE LEARNING

COURSE OBJECTIVES

To enable the students to

- To understand the basic theory underlying machine learning.
- To understand a range of machine learning algorithms along with their strengths and weaknesses.
- To be able to apply machine learning algorithms to solve problems of moderate complexity.

COURSE CONTENT

UNIT 1 Introduction Learning Problems – Perspectives and Issues – Concept Learning – Version Spaces and Candidate Eliminations – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search.

Unit 2 Neural Networks and Genetic Algorithms Department of Business Administration Faculty of Arts 65 Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evalution and Learning.

Unit 3 Bayesian and Computational Learning Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier – BayesianBelief Network – EM Algorithm – Probability Learning – Sample Complexity – Finite and Infinite Hypothesis Spaces – Mistake Bound Model.

Unit 4 Instant Based Learning K- Nearest Neighbour Learning – Locally weighted Regression – Radial Bases Functions – Case Based Learning.

Unit 5 Advanced Learning Learning Sets of Rules – Sequential Covering Algorithm – Learning Rule Set – First Order Rules – Sets of First Order Rules – Induction on Inverted Deduction – Inverting Resolution – Analytical Learning – Perfect Domain Theories – Explanation Base Learning – FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning. "Current Streams of Thought".

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Appreciate the importance of visualization in the data analytics solution
- Apply structured thinking to unstructured problems
- Develop an appreciation for what is involved in learning from data.

PROGRAMMING IN RUBY

VALUE ADDED COURSE

ABOUT THE COURSE:

- **Ruby** is a scripting language designed by Yukihiro Matsumoto, also known as Matz. It runs on a variety of platforms, such as **Windows, Mac OS,** and the various versions of **UNIX**. This tutorial gives a complete understanding on Ruby.

- **Ruby is "A Programmer's Best Friend".**

- **Ruby** has features that are similar to those of Smalltalk, Perl, and Python. Perl, Python, and Smalltalk are scripting languages. Smalltalk is a true object-oriented language. Ruby, like Smalltalk, is a perfect object-oriented language. Using Ruby syntax is much easier than using Smalltalk syntax.

COURSE OUTCOMES:

At the end this course, students will be able to

- understand a working level of skills required for a developer
- implement Practice attention to detail
- analyze Documentation skills

DATE & VENUE :

01.7.2019 to 05.07.2019, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Miss.K.Priyanka, AP/MCA

Miss.B.Priyanga, AP/MCA

19CAVC101 PROGRAMMING IN RUBY

COURSE OBJECTIVES

To enable the students to

- obtain a working level of skills required for a Junior Developer
- practice attention to detail
- documentation skills

UNIT I Introduction

Pivotal Tracker Introduction - Build your Brand - Setup a Blog - Agile Intro - Git 101 / 102 - Learn Command Line homework

UNIT II Ruby

Mentorship Introduction - Pair Programming - Learn Ruby homework

UNIT III Control Statements

Numbers, Letters and Variables - Methods and Flow Control - Methods and Recursion – Arrays

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- understand a working level of skills required for a Junior Developer
- implement Practice attention to detail
- analyze Documentation skills

JSP & SERVLET

VALUE ADDED COURSE

ABOUT THE COURSE:

- **Servlets** are used to collect data from the users, for example, forms, and also to create web pages dynamically and present the results. **JSP**, Java Server Pages, is also a technology similar to the **Servlets** and is used to create web applications.

- **Servlets** are mainly used to extend the applications hosted by webs servers, however, they can respond to other types of requests too. For such applications, HTTP-specific **servlet** classes are defined by Java **Servlet** technology. A **JSP** is a text document which contains two types of text: static data and dynamic data.

COURSE OUTCOMES:

At the end this course, students will be able to

- understand a working level of skills required for a JSP
- implement Practice attention to detail
- analyze Documentation skills

DATE & VENUE :

01.7.2019 to 05.07.2019, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Ms. S.Devi, AP/MCA

Ms. D.Kokilarani, AP/MCA

19CAVC201 JSP & SERVLET

COURSE OBJECTIVES

To enable the students to

- obtain a working level of skills required for a JSP
- practice attention to Servlet
- documentation of Framework

UNIT I JSP

Java Server Pages – JSP scripting elements & directives- Working with variables scopes-Error Pages -JSP tag libraries (JSTL).

UNIT II SERVLET

Servlet- Servlet overview –using Tomcat – Start Tomcat -Start Browser and request Servlet – Servlet API – Handling HTTP requests and responses- Session tracking – Cookies;

UNIT III FRAMEWORK

Advanced Frameworks -Understanding Struts – MVC framework – Struts control flow – Building model view controller component –Case studies – Current trends.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- understand a working level of skills required for a JSP
- implement Practice attention to detail
- analyze Documentation skills

VALUE ADDED COURSE

19GEVC101/201-INTRODUCTION OF GENDER STUDIES

About The Course:

This course will attempt to explore, challenge and rethink gender as a conceptual category, a cultural practice and a key concern in literary and other artistic representation. Gender studies asks what it means to make gender salient, bringing a critical eye to everything from labor conditions to healthcare access to popular culture. Gender is never isolated from other factors that determine someone's position in the world, such as sexuality, race, class, ability, religion, region of origin, citizenship status, life experiences, and access to resources. Beyond studying gender as an identity category, the field is invested in illuminating the structures that naturalize, normalize, and discipline gender across historical and cultural contexts.

INTENDED AUDIENCE:

- All the First year B.E., B.Tech students

Date: 09-09-2019 to 13-09-2019

Venue:

1.T403 (Drawing Hall) 2.T218 (Drawing Hall) 3.M206 (Drawing Hall) 4.AB301 (Drawing Hall) 5.AB006 (Lecture Hall) 6. AB007 (Lecture Hall) 7. AB103 (Lecture Hall) 8. AB104 (Lecture Hall) 9. AB105 (Lecture Hall) 10. AB106 (Lecture Hall).

19GEVC101/201 INTRODUCTION OF GENDER STUDIES

COURSE OBJECTIVES

To enable the students to

- introduce basic concepts relating to gender and to provide logical understanding of gender roles
- trace the evolution of gender studies from women's studies
- enable them to engage in policy decisions to remove gender biases in all fields of life in the process of gender equality for nation building

MODULE 1: Introduction

Sex and Gender, Types of Gender, Gender roles and Gender division of Labour, Gender stereotyping and Gender Discrimination

MODULE 2: Social Construction of Feminity

Bio-Social perspective of Gender, Gender as Attribution fact , Essentialism in the construction of feminity, Challenging cultural notions of feminity, media and feminine identities

MODULE 3: Women's studies and Gender studies

Evaluation and scope of women's studies, from women's to gender studies: A Paradigm shift, Women's studies VS Gender studies

TOTAL PERIODS 30

COURSE OUTCOMES

Students must gain knowledge on

- The concepts relating to gender and gains the logical understanding of gender roles
- Familiarize the evolution of gender studies from women's studies
- the removal of gender biases in all fields of life in the process of gender equality for nation building

19GEVC101/201 **INDIAN CONSTITUTION AND HUMAN RIGHTS**

COURSE OBJECTIVES

To enable the students to

- assimilate and get familiarized with basic information about Indian constitution
- understand human rights/ values and its implications in their life..
- thinking towards basic understanding of the Organs of Governance and its implications for engineers.

MODULE 1: INTRODUCTION ABOUT INDIAN CONSTITUTION

History of Making of the Indian Constitution: History Drafting Committee, (Composition & Working) - Philosophy of the Indian Constitution: Preamble Salient Features.

MODULE 2 : CONSTITUTIONAL RIGHTS & DUTIES

Contours of Constitutional Rights & Duties: Fundamental Rights , Right to Equality, Right to Freedom, Right against Exploitation, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

MODULE 3 : ORGANS OF GOVERNANCE

Organs of Governance: Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Appointment and Transfer of Judges, Qualifications.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics
- Discuss the intellectual origins of the framework of argument that informed the Conceptualization of social reforms leading to revolution in India.
- Understand the various organs of Indian governance.

VALUE ADDED COURSE
ON
COMPUTER AIDED DESIGN AUTOCAD

ABOUT THE COURSE:

AutoCAD is a commercial computer-aided design (CAD) and drafting software application used by organizations in multiple industries ranging from aerospace, automobile to consumer products..

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why AUTOCAD?

- Easier to Read
- Simplified Sharing
- Documenting the Design
- Designing Physical Objects in a Virtual Workspace.

Course Content:

- Introduction to
  - Creating a Simple Drawing
  - Setting Up a Layout
  - Adding Dimensions

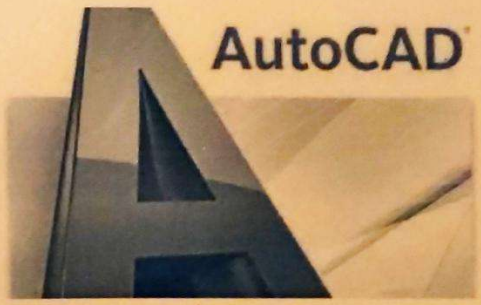
Date: 18.06.2018 to 22.06.2018

Venue:

Software lab,

Core Engineering Block

Paavai Engineering college



Course Incharge

- Ms.R.Ramachandra Prabhu AP/Aero,PEC

18AEVC301 COMPUTER AIDED DESIGN AUTOCAD

COURSE OBJECTIVES

To enable the students

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling
- understand the analysis of mechanical components

1. Creating a Simple Drawing

o AutoCAD's Screen Layout

o Working with Commands

o Opening an Existing Drawing File

o Saving Your Work

o AutoCAD's Cartesian Workspace

2.Setting Up a Layout

o Printing Concepts

o Creating Viewports

o Setting up Layouts

o Guidelines for Layouts

3.Adding Dimensions

o Dimensioning Concepts

o Adding Linear Dimensions

o Adding Radial and Angular Dimensions

o Editing Dimensions

o Adding Notes to Your Drawing

4.Working Effectively with AutoCAD

o Setting up the Interface

o Using the Keyboard Effectively

o Working in Multiple Drawings

o Using Grips Effectively

o Additional Layer Tools

5.Advanced Layouts

o Creating and Using Named Views

o Creating Additional Viewports

o Layer Overrides in Viewports

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of the course students will be able to

- Inspect and evaluate the surface imperfections using penetrant testing method.
- Inspect subsurface defects by magnetic particle.

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
COMPUTER AIDED ANALYSIS ANSYS

ABOUT THE COURSE:

Ansys develops and markets engineering simulation software for use across the product life cycle. Ansys Mechanical finite element analysis software that has been extensively validated across a wide range of applications

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why ANSYS?

- User-Friendly Interface
- Single Window, Streamlined Workflow
- Parallel Capabilities for Meshing and Solving

Course Content:

Introduction to

- ANSYS
- MODELING
- MESHING
- STRUCTURAL ANALYSIS

Date: 26.11.2018 to 30.11.2018

Venue:

Software lab,
Core Engineering Block
Paavai Engineering College

Course Incharge

- Mr.P.Prasanna AP/Aero,PEC

Ansys

18AEVC401 **COMPUTER AIDED ANALYSIS ANSYS**

COURSE OBJECTIVES

To enable the students to

- Use basic and advanced features of Analysis
- Understand how CAE technology can be leveraged in the analysis process.

INTRODUCTION TO FEA & ANSYS

GUI, Basics & general analysis procedure.

MODELING

Creating Solid model, Finite element modeling and importing models, Select Entities and Component manager.

MESHING

Quad and Tetrahedron mesh, Volumes, Areas, Line meshing. Free and mapped meshing, check mesh.

STRUCTURAL ANALYSIS

Static, Modal, Harmonic, Spectrum, p-method, Nonlinear & Transient analysis.

THERMAL ANALYSIS

Steady state thermal analysis.

ANSYS WORKBENCH

Simulation, CFX Mesh, Engineering Data sheet and FE modeler.

TOTAL PERIODS 30

COURSEOUTCOMES

Upon completion of this course the student will

- demonstrate competency with multiple analysis
- apply industry standards in the preparation of mechanical analysis

TEXT BOOK & MANUALS

- https://www.hpc.kaust.edu.sa/sites/default/files/files/public/ANSYS_Workshop/2017/5.ANSYS-Mechanical.pdf

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
COMPUTER AIDED ANALYSIS HYPERMESH

ABOUT THE COURSE:

HyperMesh supports a wide variety of CAD and solver interfaces, making it a perfect solution for most industry verticals and domains. With its advanced geometry and meshing capabilities, HyperMesh provides an environment for rapid model generation.

Who Can Join?

- II, III, IV Year of B.E.B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why HYPERMESH?

- Modelling of laminate composites is supported.
- Advanced creation, editing and visualization tools.
- Design changes can be made easily via mesh morphing and geometry dimensioning.

Course Content:

Introduction to

- HYPERMESH
- OPTISTRUCT
- MESHING
- OPTIMIZATION

Date: 04.06.2018 to 08.06.2018

Venue:

Software lab,
Core Engineering Block
Paavai Engineering College

Course Incharge

- Mr.K.Gokulnath AP/Aero,PEC

18AEVC501 COMPUTER AIDED ANALYSIS HYPERMESH

COURSE OBJECTIVES

To enable the students to

- use basic and advanced features of Analysis
- understand how CAE technology can be leveraged in the analysis process.

HYPERMESH

Basic modeling, Geometry cleanup, Organizing the model with collectors, Extracting mid surfaces & simplifying, Selecting the user Profiles, Project, Numbering, Mask, Normals, Interactive surface meshing, Element density, Algorithms, Checking element quality. Introduction to solid meshing: Solid panels, Drag, spin, Line drag, element offset, linear solid.

OPTISTRUCT

Linear Static Analysis, Thermal Analysis, Modal Analysis, Harmonic Analysis, Inertia Relief Analysis.

OPTIMIZATION

Topology, optimization for solid problems, Optimization for stress problems

HYPERMORPH

morph volumes, Morph to geometry, freehand morph, morph options

TOTAL PERIODS 30

COURSEOUTCOMES

Upon completion of this course the student will

- demonstrate competency with multiple analysis
- apply industry standards in the preparation of mechanical analysis

TEXT BOOK & MANUALS

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
COMPUTER AIDED ANALYSIS FLUENT

ABOUT THE COURSE:

Ansys Fluent gives you more time to innovate and optimize product performance. Trust your simulation results with software that has been extensively validated across a wide range of applications

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why FLUENT?

- User-Friendly Interface
- Single Window, Streamlined Workflow
- Parallel Capabilities for Meshing and Solving
- **Course Content:**

Introduction to

- CFD
- COUPLED SOLVER AND TRANSONIC FLOW
- TURBULENCE MODEL
- RADIATION AND CONVECTION

Date: 26.11.2018 to 30.11.2018

Venue:

Software lab,
Core Engineering Block
Paavai Engineering College

Ansys
FLUENT

Course Incharge

- Ms.S.Vaishnavi AP/AeroPEC

18AEVC601 COMPUTER AIDED ANALYSIS FLUENT

COURSE OBJECTIVES

To enable students to

- know about the fundamentals and applications of CFD and Fluent.
- gain knowledge incoupled solver and transonic flow in Fluent.

INTRODUCTION

Flow mix and heat transfer (3D) –Coupled solver – Mesh adaption – Transonic flow – Airfoil - CFD Simulation setup – Models - Defining regions - Material definition – Solution – Post Processing.

TURBULENCE MODEL

Turbulence model in Fluent – Setting up model – Materials and operating conditions – Solution extraction – Convergence modeling.

PERIODIC HEAT FLOWAND TURBULENT FLOW

Modeling Periodic heat Flow – Creation of zones – Model setup – Material definition – Cell zone definitions – Periodicity definition – Boundary conditions – Solution extraction – Advanced post processing. Turbulent flow in heat exchanger – Model setup – Boundary conditions – Solving – Post Processing.

RADIATION AND CONVECTION

Radiation and Convection - Model setup – Thermal boundary conditions - Solution - Post Processing. Siphoning using Multiphase – Review, test and Project discussion.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- know the Ansys Fluent GUI and software preliminaries and solver fundamentals.
- learn about coupled solver, material definitions and post processing in Fluent.

TEXT BOOK & MANUALS

- http://users.abo.fi/rzevenho/ansys%20fluent%2018%20tutorial%20guide.pdf

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
COMPUTER AIDED ANALYSIS NASTRAN PATRAN

ABOUT THE COURSE:

Patran provides a rich set of tools that streamline the creation of analysis ready models for linear, nonlinear, explicit dynamics, thermal, and other finite element solutions. From geometry cleanup tools that make it easy for engineers to deal with gaps and slivers in CAD.

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why Patran?

- User-Friendly Interface
- Enable creation of models from scratch.
- Patran makes it easy for anyone to create FE models.

Course Content:

Introduction to

- MODEL SETUP
- MODEL DEFINITION
- LOADCASE

Date: 4.06.2018 to 08.06.2018

Venue:

Software lab,
Core Engineering Block
Paavai Engineering College

Course Incharge

- Ms.S.Mary Priya AP/Aero,PEC

MSC Software
Nastran
Patran

18AEVC701 COMPUTER AIDED ANALYSIS NASTRAN PATRAN

COURSE OBJECTIVES

To enable students to

- prepare a finite element model using surface representation of an object from CAD system.
- perform a linear static analysis of the model.

1. MODEL SETUP

- Create new working folder

2. MODEL DEFINITION

- Choose model preferences
- Mesh definition
- Boundary conditions
- Material properties

3. LOADCASE

- Definition

4. RESULT EVALUATION

TOTAL PERIODS 30

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- learn about coupled solver, material definitions and post processing
- gain through knowledge in model analysis

TEXT BOOK & MANUALS

- https://www.mscsoftware.com/training-materials

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
COMPUTER AIDED ANALYSIS MATLAB

ABOUT THE COURSE:

MATLAB is a high-performance language for technical computing. It integrates computation, visualization, and programming in an easy-to-use environment where problems and solutions are expressed in familiar mathematical notation

Who Can Join?

- II, III, IV Year of B.E,B.Tech- students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why MATLAB?

- User-Friendly Interface
- MATLAB toolboxes are professionally developed, and fully documented.
- There's no need to rewrite your code or learn big data programming and out-of-memory Techniques.

Course Content:

Introduction to

- MATLAB PROGRAMMING
- APPROXIMATIONS AND ERRORS
- NUMERICAL DIFFERENTIATION AND INTEGRATION
- LINEAR EQUATIONS

Date: 26.11.2018 to 30.11.2018
Venue:
Software lab,
Core Engineering Block
Paavai Engineering College
Course Incharge

- Ms.V.Lakshmi Priya AP/Aero,PEC

MATLAB®

18AEVC801 COMPUTER AIDED ANALYSIS MATLAB

COURSE OBJECTIVES

To enable students to

- learn basics of MATLAB programming
- get introduced to numerical methods for engineering problems

1. INTRODUCTION TO MATLAB PROGRAMMING

- Basics of MATLAB programming
- Array operations in MATLAB
- Loops and execution control
- Working with files: Scripts and Functions
- Plotting and program output

2. APPROXIMATIONS AND ERRORS

- Defining errors and precision in numerical methods
- Truncation and round-off errors
- Error propagation, Global and local truncation errors

3. NUMERICAL DIFFERENTIATION AND INTEGRATION

- Numerical Differentiation in single variable
- Numerical differentiation: Higher derivatives
- Differentiation in multiple variables
- Newton-Cotes integration formulae
- Multi-step application of Trapezoidal rule
- MATLAB functions for integration

4. LINEAR EQUATIONS

- Linear algebra in MATLAB
- Gauss Elimination
- LU decomposition and partial pivoting
- Iterative methods: Gauss Siedel
- Special Matrices: Tri-diagonal matrix algorithm

TOTAL PERIODS 30

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- solve the numerical problems
- gain through knowledge in model analysis

TEXT BOOK & MANUALS

- https://www.mscsoftware.com/training-materials

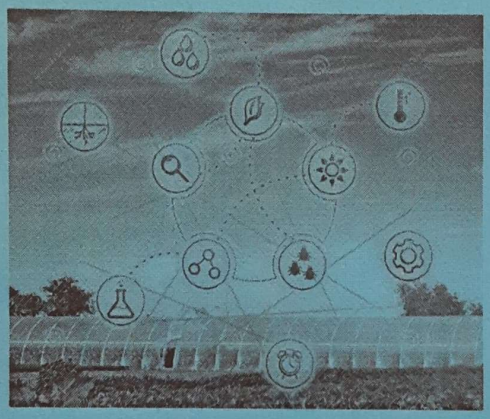
PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

18AIVC301 AGRO METEOROLOGY AND CLIMATE CHANGE



Course Content:

- Agricultural meteorology, composition and structure of atmosphere, basics of weather forecasting
- Climate change, global warming, past and future change
- Mechanism of ozone, increased temperature and plants, mitigation strategies

Date: 18.06.2018 to 22.06.2018
Venue:T406

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. Dr.C.Mayilswami, AP/AGRI

18AIVC301 AGRO-METEOROLOGY AND CLIMATE CHANGE

COURSE OBJECTIVES

To enable the students to

- Impart the basic knowledge of agriculture meteorology
- Study the climate changes and causes
- Acquire knowledge in tolerance in plant at different climate condition

UNIT I

Agricultural MeteorologyIntroduction, definition of meteorology, scope and practical utility of Agricultural meteorology. Composition and structure of atmosphere and definition of weather and climate, aspects involved in weather and climate, atmospheric temperature, soil temperature, solar radiation, atmospheric pressure, atmospheric humidity, evaporation and transpiration, monsoons, rainfall, clouds, drought. Basics of weather forecasting.

UNIT II

Climate change-causes. Global warming-causes and remote sensing. Effect of climate change on horticulture Past and future changes in greenhouse gases within the atmosphere. Sources and sinks for greenhouse gases. Plants sense and respond to changes in CO2 concentration. Measurement of short-term effects and mechanisms underlying the observed responses in C3 and C4 species.

UNIT III

The mechanisms of ozone and UV damage and tolerance in plants. Increased temperature and plants in tropical/sub-tropical climates- effect on growing season, timing of flowering, duration of fruit development and impacts on crop yields and potential species ranges, interaction of temperature with other abiotic/biotic stress. Mitigation strategies and prospects for genetic manipulation of crops to maximize production in the future atmosphere..

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the concept agro metrology

- Analyze globle warming and remadies
- Gain idea about duration of fruit development.

TEXT BOOKS

1. K. Srivastava and P. K. Tyagi, 2011. Practical Agricultural Meteorology. New Delhi Publishing Agency, New Delhi.

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

18AIVC401 ORGANIC AGRICULTURE

Course Content:

- Relevance in present content, organic production requirements, recycling of organic residues
- Bio fertilizers, integrated pest and disease management
- Weed management, role of micro organism

Date: 26.11.2018 to 30.11.2018
Venue:T408

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. S.Nithya, AP/AGRI

18AIVC401 **ORGANIC AGRICULTURE**

COURSE OBJECTIVES

To enable the students to

- Impartbasic knowledge of organic manure production
- Study the uses of bio fertilizer
- Understand the role of microorganism in soil.

Unit I

introduction, concept, relevance in present context; Organic production requirements; Biological intensive nutrient management-organic manures, vermicomposting, green manuring, recycling of organic residues,

Unit II

.biofertilizers; Soil improvement and amendments; Integrated diseases and pest management – use of biocontrol agents, biopesticides pheromones, trap crops, bird perches;

Unit III

Weed management; Quality considerations, certification, labeling and accreditation processors, marketing, exports. Role of microorganisms in organic matter- decomposition – humus formation. Importance of C:N ratio.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- understand the concept of organic farming
- analyze the bio pesticide uses for better growth of plant
- gain idea about decomposition and humus formation

TEXT BOOKS

1. A.K.Dahama. 2007. Organic farming for sustainable agriculture. Agrobios (India), Jodhpur.

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

18AIVC501 BASICS OF FARM POWER AND MACHINERY

Course Content:

- Basic concepts of various forms of energy, broad understanding of performance and efficiency.
- Electric motor, primary tillage implements.
- Secondary tillage implements, intercultural equipments.

Date: 4.6.2018 – 8.6.2018
Venue: T 406

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. S.Sreedevi, AP/AGRI

18AIVC501 BASICS OF FARM POWER AND MACHINERY

COURSE OBJECTIVES

To enable the students to

- To Understand about concept of farm machinery
- To learn the Basic principles of operation of compression
- To leatn the uses of tillage implements

Unit I

Basic concepts of various forms of energy , unit and dimensions of force energy and power, calculations with realistic examples. IC Engines: Basic principles of operation of compression, ignition and spark ignition engines, two stroke and four stroke engines, cooling and lubrication system, power transmission system, broad understanding of performance and efficiency, tractors, power tillers and their types and uses.

Unit II

Electric motors: types, construction and performance comparison. Tillage: objectives, method of ploughing. Primary tillage implements: construction and function of indigenous ploughs, improved indigenous ploughs, mould board ploughs, disc and rotary ploughs.

Unit III

Secondary tillage implements: construction and function of tillers, harrows, levelers, ridgers and bund formers. Sowing and transplanting equipment: seed drills, potato planters, seedling transplanter. Grafting, pruning and training tools and equipment. Inter-culture equipment: sweep. Junior hoe, weeders, long handle weeders

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Explain about concept of primary tillage implements
- Analyze the various uses of transplanter
- Gain idea about different types weeders and uses

TEXT BOOKS

Value added course

18AIVC601 SOIL, WATER AND PLANT ANALYSIS

COURSE CONTENT:

- Introduction to analytical chemistry, sample analysis ,sodium absorption.
- Estimation of nutrient elements, determination of PH and EC.
- Determination of micro and macro elements.

Date: 26.11.2108 – 30.11.2018
Venue: T 407

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. Kiruthika, AP/AGRI

18AIVC601 SOIL, WATER AND PLANT ANALYSIS

COURSE OBJECTIVES

To enable the students to

- learn about soil and water nutrient content analysis
- Understand the water quality for irrigation
- know about appropriate micro nutrient present in the soil and water

Unit I

Introduction to analytical chemistry, Collection and preparation of soil, water and plant samples for analysis. Sodium adsorption ratio and exchangeable sodium percentage of soils.

Unit II

Estimation of nutrient elements in soils and their contents in plants. Irrigation water quality analysis. Determination of pH and EC in irrigation water samples, Determination of Carbonates and bicarbonates in soil and irrigation water

Unit III

Determination of N, P, K, Ca, Mg, S and micronutrients in plant samples. Determination of Sodium, Potassium, Chlorine and Boron in irrigation water..

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the water quality test
- Analyze the soil and plant nutrient content.
- Gain idea about determination of carbonates and bicarbonates in soil and irrigation water

TEXT BOOKS

1. H.L.S. Tandon. 2013, Methods of analysis of soil, plant, water and fertilizers. FDCO, New Delhi. Yawalkar,K.S.Agarwal,J.P.and Bokde,S.,1977.

18AIVC701 HI-TECH HORTICULTURE

Course content:

- Nursery management, micro propagation.
- Protected cultivation, micro irrigation system, canopy management
- Components of precision farming, GIS, DGPS.

Date: 4.6.2018 – 8.6.2018
Venue: T 406

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. P.Athira, AP/AGRI

AI18VC701

HI-TECH HORTICULTURE

COURSE OBJECTIVES

To enable the students to

- Impart basic knowledge in high density planting
- Study the nursery management and meganization
- Understand the precision farming under protected cultivation

Unit I

Introduction & importance; Nursery management and mechanization; micro propagation of horticultural crops; Modern field preparation and planting methods.

UNIT II

Protected cultivation: advantages, controlled conditions, method and techniques, Micro irrigation systems and its components; EC, pH based fertilizer scheduling, canopy management, high density orcharding.

UNIT III

Components of precision farming: Remote sensing, Geographical Information System (GIS), Differential Geo-positioning System (DGPS), Variable Rate applicator (VRA), application of precision farming in horticultural crops (fruits, vegetables and ornamental crops); mechanized harvesting of produce.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Acquire knowledge of Modern field preparation
- gain idea about Protected cultivation advantages, controlled conditions
- understand the horticulture crop management practices

TEXT BOOKS

1. Prasad and Kumar Commercial Floriculture –Proceeding of International Seminar on Protected cultivation in India, Held at Bangalore 1997.

Value Added Course

18AIVC801 STRUCTURE AND DYNAMICS OF INDIAN AGRICULTURE

Course Content:

- Indian economy pattern of agricultural holdings, consolidation of land holding
- Different types of revolution, agricultural productivity, irrigation development
- Five year plans, problems for good security

Date: 26.11.2018 – 30.11.2018
Venue: T403

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. K.B.Ramkumar, AP/AGRI

18AIVC801 **STRUCTURE AND DYNAMICS OF INDIAN AGRICULTURE**

COURSE OBJECTIVES

To enable the students to

- introduce about the management of crop in all aspects
- study the Different Types of Revolutions in India.
- Understand the five years plan and its silent features

Unit I

Indian Economy: Pattern of Agriculture Holdings, Fragmentation, Sub-Division and Consolidation of Land Holdings. Place of Agriculture in National Economy and Comparison with other Countries.

UNIT II

Different Types of Revolutions in India. Agricultural Productivity: Trends, Causes and Consequences of Low Productivity in India. Green Revolution: New Strategy in Development of Indian Agriculture, High Yielding Varieties (HYV) Programme, Irrigation Development Agriculture and Farm Mechanization.

UNIT III

Five Year Plans- Silent Features, NITI Ayog, Place of Agriculture in National Planning, Problems of Food Security.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the New Strategy in Development of Indian Agriculture
- Identify the gain idea about Problems of Food Security.
- Gain knowledge place of Agriculture in National Planning

TEXT BOOKS

1. Mamoria, C.B. Agricultural Problems of India. Kitab Mahal, Allahabad.
2. by S. Subba Reddy Agricultural Economics, Oxford and IBH Publ. Co. Pvt. Ltd.

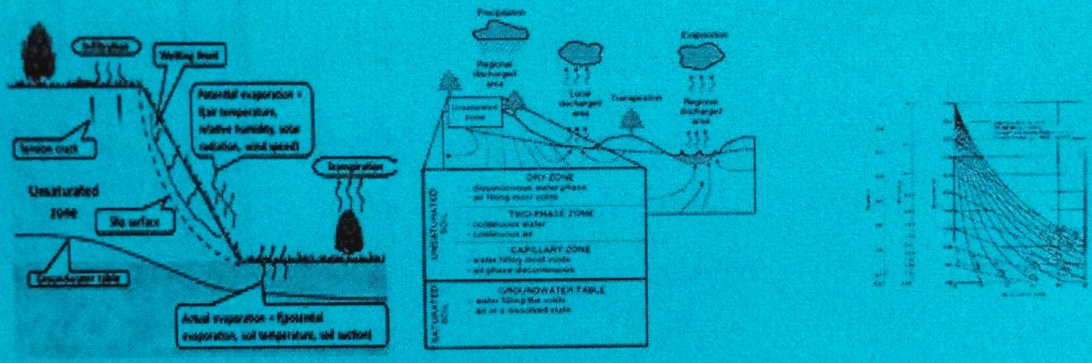
NAMAKKAL -637 018

DEPARTMENT OF CIVIL ENGINEERING

Value Added Course

18CEVC301 - UNSATURATED SOIL MECHANICS



- Unsaturated Soil Mechanics will aid your understanding of the flow behaviors and concepts of unsaturated soils. By learning the principles and concepts of unsaturated soil mechanics, you will have the required knowledge needed to help prefer solutions to geotechnical problems involving unsaturated soils.
- This course also covers the topics such as Introduction to Unsaturated Soil Mechanics, State Variables and their Measurement, The Soil-Water Characteristic Curve, SWCC, Seepage through Unsaturated Soils, Shear Strength of Unsaturated Soils

Date :18.6.2018 to 22.6.2018

Venue: T226

Course Incharge:

1. Mrs.J.Umanabi HOD/Civil
2. Mr.N.Moorthi AP/Civil
3. Mr.P.Vignesh AP/Civil

18CEVC301 **UNSATURATED SOIL MECHANICS**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on unsaturated soil mechanics properties
- understand the fundamental principles, mechanisms, and behaviour of partly saturated soils

Module I

Introduction; Application areas; Basic parameters-Basic parameters; Phase equilibrium-Concept of water retention; Soil water characteristics (SWCC); Hysteresis; Mechanisms

Module II

Measurement of state variables -Measurement of state variables; Theoretical SWCC -Demonstration of software for fitting SWCC; Pedo-Transfer functions (PTF) -Hydraulic Conductivity; Measurement; Predictive models

Module III

Hydraulic Conductivity prediction; Capillary barriers; Software demonstration -Steady-state flow; Absence and influence of gravity -Analytical methods for transient flow; Shear strength-Shear strength; Swell and Collapse behavior

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply behaviour of different clays and clay minerals for their application in engineering,
- manipulate the infiltration and drainage characteristics of unsaturated soils, diffusion characteristics of various clays.

TEXT BOOKS

1. Unsaturated Soil Mechanics by Ning Lu and William J. Likos, Wiley India Pvt Ltd ,2013

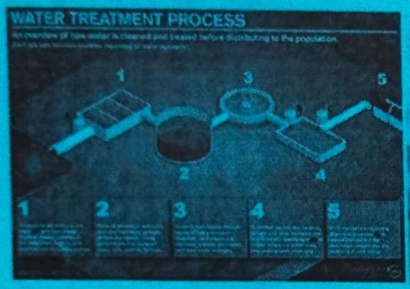
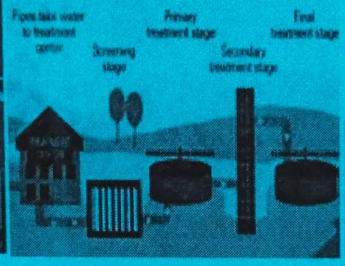
Value Added Course

18CEVC401 - WASTE WATER TREATMENT AND RECYCLING





- This course emphasizes on Waste Water Treatment aspects within the broad subject area of integrated waste management and recycling.
- The course topics will include generation rates and water composition, collection, recovery, reuse, recycling, Biological treatment of the organic waste fraction, composting, and anaerobic digestion, Wastewater Generation and Characteristics: Wastewater generation and quantity estimation; Water quality parameters and standards and Treatment Philosophy: Objectives of wastewater treatment; Concept of mass balance; kinetics and equilibrium processes; and Plug-flow reactors Introduction to primary, secondary and tertiary treatment;

Date : 26.11.2018 to 30.11.2018

Venue : Environmental Engineering Laboratory

Course Incharge:

1. Dr.S.Sukumar Dean/Civil
2. Ms.S.Gayathri AP/Civil
3. Mr.A.Jayapal AP/Civil

18CEVC401 **WASTEWATER TREATMENT AND RECYCLING**

COURSE OBJECTIVES

To enable the students to

- understand on technologies for water reclamation and reuse
- understand the concepts of wastewater treatment,
- learn the principles of various wastewater treatment units, recycling and reuse opportunities

Module I

Introduction: General outline; Introduction to wastewater Waste water Generation and Characteristics Natural Attenuation of Pollutants in Wastewater Treatment Philosophy

Module II

Objectives of wastewater treatment Preliminary and Primary Treatment Processes Secondary Treatment Processes

Module III

Secondary Treatment Processes-Anaerobic Sludge Management Tertiary (Advanced) Treatment Processes Current Treatment Approaches Wastewater Recycling: Scope and demands Technology Selection and Decision Making

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply technologies for water reclamation and reuse
- find solution for recycling of polluted water
- design various wastewater treatment units, recycling and reuse opportunities

TEXT BOOKS

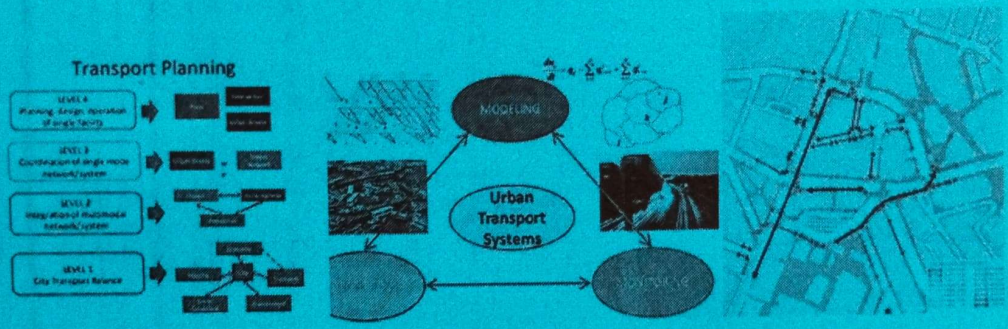
18CEVC501 - URBAN TRANSPORATATION AND SYSTEM PLANNING



- This course covers the challenging need for effective and efficient planning of urban transport addressing the growing travel demand in a sustainable and affordable way.
- This course also covers the topic such as Introduction to Urban Transportation Planning, Urbanization, Urban Transportation, Overview of traditional four step travel demand forecasting process, Route Choice Behavior: User equilibrium, system equilibrium, stochastic equilibrium, Diversion Curves: California diversion curves, Detroit diversion curves, Classification of urban goods movement; Factors affecting goods movement; Modeling Approaches.

Date : 4.6.2018 to 8.6.2018

Venue : T225

Course Incharge:

1. Mrs.A.Kalaivani AP/Civil
2. Mr.A.Arun AP/Civil
3. Mr.M.Rajkannan AP/Civil

18CEVC501 URBAN TRANSPORTATION SYSTEMS PLANNING

COURSE OBJECTIVES

To enable the students to

- gain knowledge on challenging need for effective and efficient planning of urban transport addressing the growing travel demand in a sustainable and affordable way

Module I

- Overview of Urban Transportation Planning Process - Overview of Urban Transportation Planning Process (Continued) - Trip Generation- Trip Generation (Continued) Week 5: Trip Distribution - Trip Distribution (Continued) - Modal Split - Modal Split (Continued) - Traffic Assignment Week Traffic Assignment (Continued) - Land use and transport - Urban Goods Movement

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- understand urban transport in all relevant dimensions, and develop urban transport plans, programs and projects

TEXT BOOKS

1. Strategic Planning for Urban Transportation: A Dynamic Performance Management Approach: 3 (System Dynamics for Performance Management & Governance) by Guido Noto, 2017

18CEVC601 - SAFETY IN CONSTRUCTION

- This course aims to make the students well-versed with the latest safety and health regulations and the Indian Standards applicable to the construction industry and students will be able to plan, assess, analyze and manage the hazardous construction project sites.
- This course also cover the topics such as Basic terminology in safety, types of injuries, safety pyramid, Accident patterns, theories of accident-causation, Role of stakeholders in safety, Site safety programs - Job hazard analysis, accident investigation & accident indices-violation, penalty, Safety during construction, alteration, demolition works – Earthwork, steel construction, temporary structures, masonry & concrete construction, cutting & welding, Other hazards – fire, confined spaces, electrical safety, BIM and safety.

Date : 26.11.2018 to 30.11.2018

Venue : T226

Course Incharge:

1. Mr.K.Vivek AP/Civil
2. Mr.B.Thiyagarajan AP/Civil
3. Mr.A.Arun AP/Civil

18CEVC601 **SAFETY IN CONSTRUCTION**

COURSE OBJECTIVES

To enable the students to

- make the students well-versed with the latest safety and health regulations
- understand the Indian Standards applicable to the construction industry.
- Learn the Safe operating procedures

Module I

Basic terminology in safety, types of injuries, safety pyramid - Accident patterns, theories of accident-causation - Planning for safety budget, safety culture - Introduction to OSHA regulations; Role of stakeholders in safety

Module II

Site safety programs - Job hazard analysis, accident investigation & accident indices-violation, penalty - Safety during construction, alteration, demolition works - Earthwork, steel construction, temporary structures, masonry & concrete construction, cutting & welding

Module III

SoPs (Safe Operating Procedures) - Construction equipment, materials handling-disposal & hand tools - Other hazards - fire, confined spaces, electrical safety; BIM & safety

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply latest safety and health regulations in construction industry
- follow the Indian Standards applicable to the construction industry.
- Apply the SoP's in BIM & safety

Value Added Course

18CEVC701 - CONSTRUCTION METHODS AND EQUIPMENT MANAGEMENT

- This course provides comprehensive information on guidelines for selection of equipment, estimation of cost and productivity of various equipment and determination of optimum replacement time of equipment.
- This course also deals with the topics such as Introduction to course and Planning Process of Equipment , Cost of Owning and Operating Construction Equipment, Equipment Life and Replacement Analysis, Engineering Fundamentals of Moving Earth, Earthmoving and Excavating equipment, Piles and Pile driving equipment, Lifting equipment, Concreting equipment andIllustrations on production estimation of scraper and balancing interdependent machines.

Date : 4.6.2018 to 8.6.2018

Venue: T229

Course Incharge:

1. Mrs.K.Sharmiladevi AP/Civil
2. Mr.M.Rajkannan AP/Civil
3. Mr.P.Vignesh AP/Civil

18CEVC701 CONSTRUCTION METHODS AND EQUIPMENT MANAGEMENT

COURSE OBJECTIVES

To enable the students to

- provides comprehensive information on guidelines for selection of equipment, estimation of cost and productivity of various equipment
- determine the optimum replacement time of equipment
- gain knowledge on pile driving equipment

Module I

Introduction to course and Planning Process for Equipment - Cost of Owning and Operating Construction Equipment

Module II

Equipment Life and Replacement Analysis - Engineering fundamentals of moving earth - Earthmoving and Excavating equipment

Module III

Piles and Pile driving equipment - Lifting Equipment - Concreting Equipment - Applications

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply guidelines for selection of equipment, estimation of cost and productivity of various equipment
- manipulate the optimum replacement time of equipment
- calculate number of piles required for a site

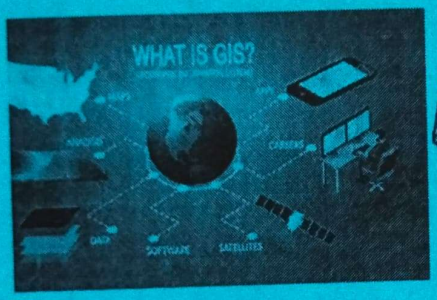
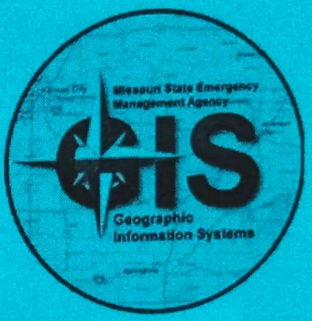
18CEVC8O1 - GEOGRAPHIC INFORMATION SYSTEMS





- This course targets to introduce and teach students basics of GIS using free and open software, it would discuss analyzing various issues and criticalities in producing accurate data. The concepts are illustrated with appropriate examples.
- This course also discuss about the topics such as Introduction to GIS, Representing a real world in digital scope, Data types and data models, Advanced data models in GIS and Data Generation/Collection/Surveys, Database query and Spatial analysis, Quantum GIS introduction, Hands on working with maps, data integration, collection, digitization and extraction and Data standards and Interoperability WEBGIS through GEOSERVER hands-on tutorials

Date : 26.11.2018 to 30.11.2018

Venue: T225

Course Incharge:

1. Mr.A.Jayapal AP/Civil
2. Ms.R.Ramya AP/Civil
3. Mr.K.R.Prabhakaran AP/Civil

18CEC801 **GEOGRAPHIC INFORMATION SYSTEMS**

COURSE OBJECTIVES

To enable the students to

- understand about Geographic Information Systems and their applications in Civil Engineering and Earth Sciences

Module I

Essential components of GIS, Different types of vector data, Concept of topology, Demonstration through GIS software- Raster data model and comparisons with vector, TIN data model and comparisons with raster, Non-spatial data (attributes) and their types, Vector Data Compression Techniques, Demonstration through GIS software

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply GIS softwares in construction industry

TEXT BOOKS

1. Remote sensing & GIS by Basudeb Bhatta, OUP PUBLISHERS, January 2011

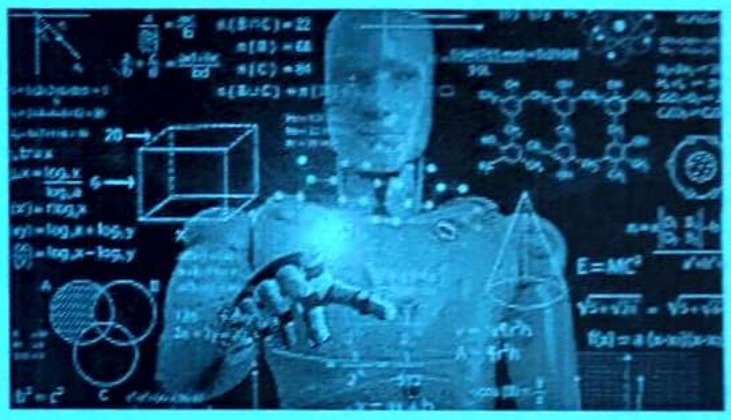
ROBOTICS

Robots are widely used in manufacturing, assembly, packing and packaging, mining, transport, earth and space exploration, surgery, weaponry, laboratory research, safety, and the mass production of consumer and industrial goods.



Robots are widely used in such industries as automobile manufacture to perform simple repetitive tasks, and in industries where work must be performed in environments hazardous to humans.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to understand the autoamation integration with science and in which field the robotics are used

Date: 18.06.2018-22.06.2018

COURSE CO-ORDINATOR

Mrs. R. Dhivya, AP/CSE

18CSVC301 ROBOTICS

COURSE OBJECTIVES

To enable the students to

- To introduce the functional elements of Robotics
- To impart knowledge on the direct and inverse kinematics
- To introduce the manipulator differential motion and control

UNIT I BASIC CONCEPTS

Brief history-Types of Robot–Technology-Robot classifications andSpecifications-Design and control issues- Various manipulators – Sensors -work cell – Programminglanguages.

UNIT II DIRECT AND INVERSE KINEMATICS

Mathematical representation of Robots - Positionand orientation – Homogeneoustransformation Various joints- Representation using the DenavitHattenberg parameters

UNIT III MANIPULATOR DIFFERENTIAL MOTION AND STATICS

Linear and angular velocities-Manipulator Jacobian-Prismatic and rotary joints–Inverse -Wrist and arm singularity - Static analysis –Force and moment Balance.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Ability to understand basic concept of robotics.
- To analyze Instrumentation systems and their applications to various
- To know about the differential motion add statics in robotics

DATA VISUVALIZATION WITH R

Data visualization gives us a clear idea of what the information means by giving it visual context through maps or graphs. This makes the data more natural for the human mind to comprehend and therefore makes it easier to identify trends, patterns, and outliers within large data sets.

Customizing graphics is easier and more intuitive in R with the help of ggplot2 than in Python with Matplotlib. The Seaborn library helps to overcome this, and offers good standard solutions which get by with relatively few lines of code.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to undrstand how to visualise the data with R programming language

Date: 26.11.2018 - 30.11.2018

COURSE CO-ORDINATOR

Dr. N. Magendiran, ASP/CSE

18CSVC401 DATA VISUALIZATION WITH R

COURSE OBJECTIVES

To enable the students to

- To Understand the concept of Basic Visualization Tools
- To Understand the concept of Basic Visualization Tools
- To learn about the concept Specializedof Visualization Tools

Module 1 - Basic Visualization Tools

- Bar Charts
- Histograms
- Pie Charts

Module 2 - Basic Visualization Tools Continued

- Scatter Plots
- Line Plots and Regression

Module 3 - Specialized Visualization Tools

- Word Clouds
- Radar Charts
- Waffle Charts
- Box Plots

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Implement the concept of Basic Visualization Tools
- Implement the concept of Basic Visualization Tools
- Analyze the concept Specializedof Visualization Tools

TEXT BOOKS

1. Data Visualization with R - Rob kabacoff PhD, Quantitative analysis center Wesleyan University.

Training Course

DATA SCIENCE

Data science is the field of study that combines domain expertise, programming skills, and knowledge of mathematics and statistics to extract meaningful insights from data.

Data science is a process that empowers better business decision-making through interpreting, modeling, and deployment. This helps in visualizing data that is understandable for business stakeholders to build future roadmaps and trajectories.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to understand the data and how to proccess it, how to visualise data in efficient manner

Date: 04.06.2018 - 08.06.2018

COURSE CO-ORDINATOR

Mrs. J. Velumani, ASP/CSE

18CSVC501 DATA SCIENCE

COURSE OBJECTIVES

To enable the students to

- To know the fundamental concepts of data science
- To learn various techniques for mining data streams
- To learn Event Modelling for different applications.

UNIT I INTRODUCTION TO DATA SCIENCE

Introduction to Data Science – Applications - Data Science Process – Exploratory Data analysis – Collection of data – Graphical presentation of data – Classification of data – Storage and retrieval of data.

UNIT II DATA MINING TECHNIQUES

Rule Induction - Neural Networks: Learning and Generalization - Competitive Learning - Principal Component Analysis and Neural Networks

UNIT III MINING DATA STREAMS

Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Work with big data platform and its analysis techniques.
- Design efficient algorithms for mining the data from large volumes.
- Model a framework for Human Activity Recognition

CLOUD COMPUTING

Cloud computing means storing and accessing data and programs over the internet instead of your computer's hard drive. ... When you store data on or run programs from the hard drive, that's called local storage and computing.

Organizations of every type, size, and industry are using the cloud for a wide variety of use cases, such as data backup, disaster recovery, email, virtual desktops, software development and testing, big data analytics, and customer-facing web applications.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to learn how to upload and use datas and other medias on cloud

Date: 26.11.2018 - 30.11.2018

COURSE CO-ORDINATOR

1 V.Mageskumar AP/CSE

18CSVC601 CLOUD COMPUTING

COURSE OBJECTIVES

To enable the students to

- Course gives students an insight into the basics of cloud computing along with virtualization
- Understand the Overview Origins of Cloud computing basic
- Provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.

Module-1

Cloud Computing Overview Origins of Cloud computing – Cloud components - Essential characteristics – On-demand selfservice, Broad network access, Location independent

Module-2

Cloud Insights Architectural influences – High-performance computing, Utility and Enterprise grid computing, Cloud scenarios – Benefits: scalability ,simplicity ,vendors ,security, Limitations – Sensitive information

Module-3

Cloud Architecture- Layers and Models Layers in cloud architecture, Software as a Service (SaaS), features of SaaS and benefits, Platform as a Service (PaaS), features of PaaS and benefits.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Course gives students an insight into the basics of cloud computing along with virtualization.
- Understand about cloud and virtualization along with it how one can migrate over it.
- Implement the students basic understanding about cloud and virtualization along with it how one can migrate over it.

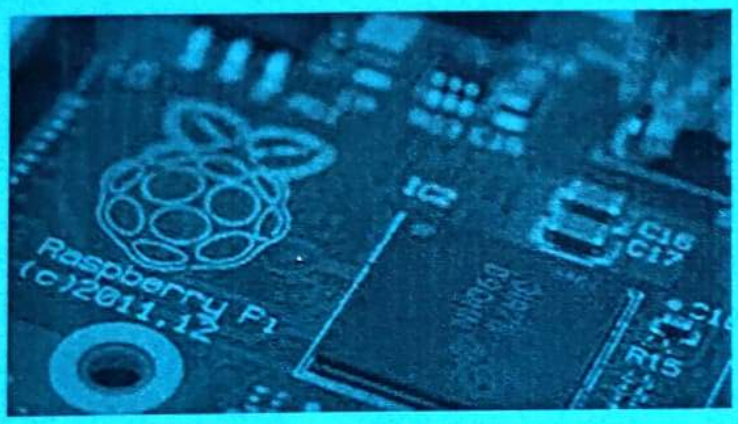
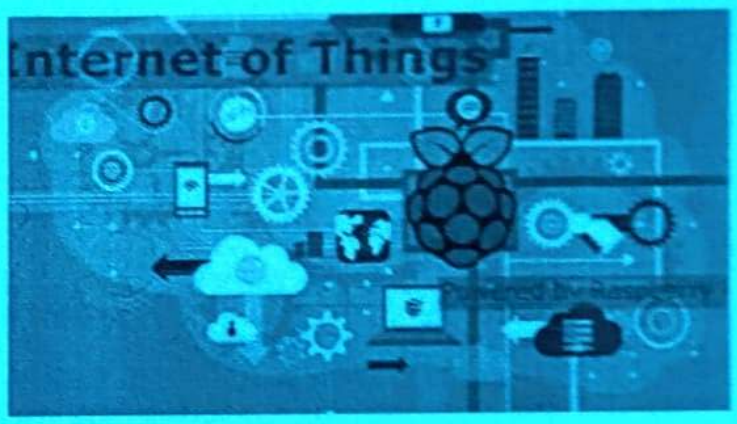
IOT USING RASPBERRY PI

With an in-built quadcore processor, Raspberry Pi can serve as the "Internet Gateway" for IoT devices. Powered by a cloud network, Pi acts as a web server for uploading and transiting sensor data on IoT platforms





The IOT refers to the network and connection of different devices with data-taking hardware (like sensors) that can exchange information.Raspberry Pi boards are hugely popular single-board computers (SBCs) that are well suited to DIY IoT devices due to their small size and exhaustive capabilities.

INTENDED AUDIENCE

- IV Year of B.E, B.Tech - Students
- Students able to know how the IOT(Internet Of Things) works and how to use Raspberry Pi boards

Date: 04.06.2018 - 08.06.2018

COURSE CO-ORDINATOR

Mr. J. Karthik, AP/CSE

18CSVC701 IOT USING RASPBERRY PI

COURSE OBJECTIVES

To enable the students to

- Elucidates concepts related to Internet of Things
- The students will get handson experience in working with Raspberry Pi 3 and exploring IoT.
- To understand about the concept of RPi

UNIT I

Overview of IoT Understanding IoT fundamentals , IOT Architecture, protocols ,Various Platforms for IoT ,Real time Examples of IoT ,Overview of IoT components and IoT Communication Technologies

UNIT II

Getting started with Raspberry Pi Introduction to Raspberry Pi , Comparison of various Rpi Models Understanding SoC architecture and SoCs used in Raspberry Pi , Pin Description of Raspberry Pi , On-board components of Rpi, Projects using Raspberry Pi

UNIT III

Booting Up RPi Operating System and Linux Commands, Linux- Introduction, Architecture, File System, Raspbian O.S.- Introduction, Tools like Leafpad Editor, Installing Raspbian on Pi, First boot and Basic Configuration of Pi, Popular Linux Commands

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- completion of the course, the students will be able to understand the working of Raspberry Pi.
- features and how various components can be used with Pi.
- Implement the concept of RPi

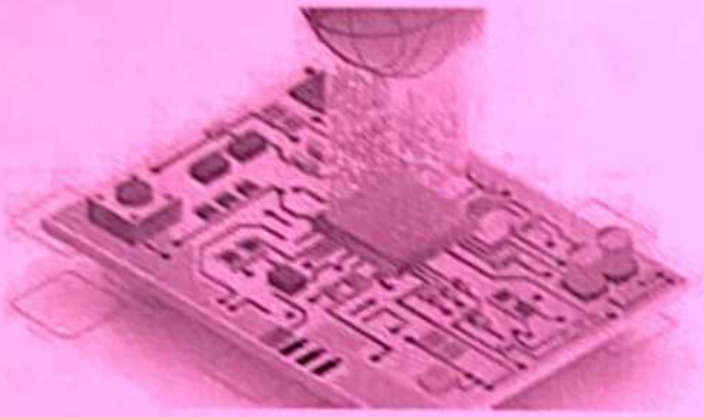
EMBEDDED OS AND RTOS

An embedded OS is essentially the brain of an embedded computer system, which defines the functionality of a product. It is engineered and optimized to improve the efficiency of controlling the hardware resources, drive graphics processing, and decrease response time for the tasks performed by the device.



Smart home security systems, ATM machines, and air conditioners are embedded systems and an airplane's flight control system is a real-time embedded system where time is a core factor. A real-time operating system(RTOS) is software that supplements computer hardware complexities

INTENDED AUDIENCE

- IV Year of B.E, B.Tech - Students
- Students able to know what is Operating system and Real- time Opereting system. And how it used

Date: 26.11.2018 - 30.11.2018

COURSE CO-ORDINATOR

Mr. S. Rajesh, AP/CSE

18CSVC801 EMBEDDED OS & RTOS

COURSE OBJECTIVES

To enable the students to

- understanding of the techniques essential to the design and implementation of device drivers and kernel internals of embedded operating systems.
- Provides the students with an understanding of the aspects of the Realtime systems.
- Provide an understanding of the techniques essential to the design and implementation of real-time embedded systems.

Module 1

Embedded OS (Linux) Internals Linux internals: Process Management, File Management, Memory Management, I/O Management. Overview of POSIX APIs, Threads – Creation, Cancellation, POSIX Threads Inter Process Communication – Semaphore, Pipes, FIFO, Shared Memory Kernel: Structure, Kernel Module Programming

Module 2

Open source RTOS Basics of RTOS: Real-time concepts, Hard Real time and Soft Real-time, Differences between General Purpose OS & RTOS, Basic architecture of an RTOS

Module 3

VxWorks / Free RTOS VxWorks/ Free RTOS Scheduling and Task Management – Realtime scheduling, Task Creation, Intertask Communication, Pipes, Semaphore, Message Queue, Signals, Sockets, Interrupts

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the Embedded Real Time software that is needed to run embedded systems
- Understand the open source RTOS and their usage
- Understand the VxWorks RTOS and realtime application programming with it.

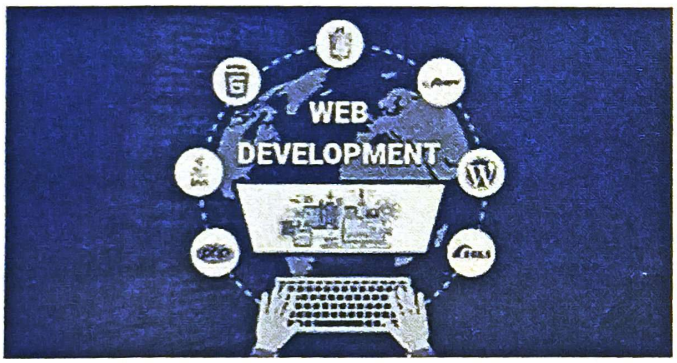
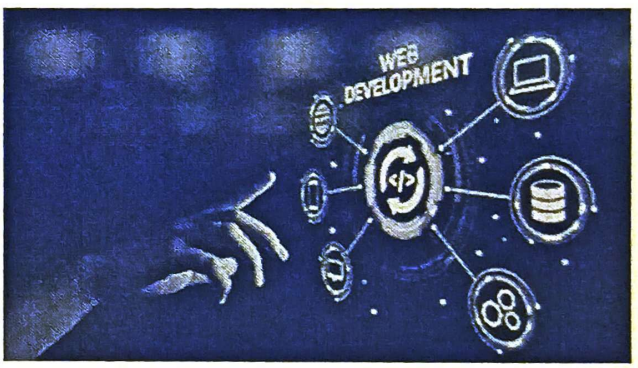
RECENT TRENDS IN WEB TECHNOLOGY





Date: 18.06.2018 – 22.06.2018

Course Co-ordinator: Dr. P. Rajkumar, Prof / ECE

Venue: M208

18ECVC301 **RECENT TRENDS IN WEB TECHNOLOGY**

COURSE OBJECTIVE

To enable the students to

- develop web pages using XML/XSLT
- understand about JavaScript and XML.

Unit-I-XML Web Data **15**

XML-Documents and Vocabularies-Versions and Declaration –Namespaces JavaScript and XML: Ajax-DOM based XML processing Event-oriented Parsing: SAX-Transforming XML Documents-Selecting XML Data: XPATH-Template based Transformations: XSLT Displaying XML Documents in Browsers-Case Study Related Technologies.

Unit II – JSP Technology **15**

JSP Technology Introduction-JSP and Servlets-Running JSP Applications Basic JSP Java Beans Classes and JSP-Tag Libraries and Files-Support for the Model-View-Controller Paradigm-Case Study-Related Technologies.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- design simple web pages using markup languages like XML and XSLT
- design simple web pages using JSP Technology

TEXT BOOK

Course Co-ordinator: Dr. T. Loganayagi, Prof / ECE

Venue: M208

18ECVC401 **RECENT TRENDS GPS TECHNOLOGY**

COURSE OBJECTIVE

To enable the students to

- identify the two GPS Observables
- understand some GPS surveying methods

Unit-I- GPS Observables: **15**

Introduction to adjustment computations, Observation equations, Code-based, Carrier phase-based. **Navigational solution:** Code/phase based, Data Processing Models, Models for single point positioning and relative/differential positioning, Data combinations, Ambiguity resolution, Single difference, Double difference, Triple difference, Static relative positioning, Kinematic relative positioning.

Unit II – GPS Survey Methods: **15**

Single Point or Point Vs Relative, Static Vs Kinematic, Real time Vs Post mission. Practical GPS survey field procedures: Code and Carrier-based positioning, Accuracy and recording time. Preparation of GPS surveys: Setting up an observation plan, Practical aspects of field observations, Observation strategies, Network design.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- recognize the pseudo-range equation
- describe GPS Segment Organization

ISEEVC301 AUTOMOTIVE ELECTRONICS

COURSE OBJECTIVES

To enable the students to

- To study the electronic instruments for automobiles
- To study the advanced electronics instruments for ignition and braking systems
- To study the functions of manipulators

UNIT I INTRODUCTION **10**

Automotive component operation - Electrical wiring terminals and switching - Multiplexed wiring systems - Circuit diagrams and symbols - Charging Systems and Starting Systems: Charging systems principles, alternations and charging circuits - Basic starting circuit.

UNIT II IGNITION SYSTEMS **10**

Hydraulic, pneumatic and electric drives–determination of HP of motor and gearing ratio–variable speed arrangements –path determination –micro machines in robotics–machine vision–ranging –laser –acoustic–magnetic, fiber optic and tactile sensors.

UNIT III MANIPULATORS, ACTUATORS AND GRIPPERS **10**

Construction of manipulators–manipulator dynamics and force control–electronic and pneumatic manipulator control circuits–end effectors–U various types of grippers–design considerations.

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Provide an introduction and a deep knowledge in various ignition and instrumentation systems in vehicles
- Model and stimulate the various modern electronics automotive systems by using various numerical analysis and simulation tools
- Formulate and solves electronic engineering challenges related to the most representative automotive systems using the classical and modern methodologies in electronics engineering

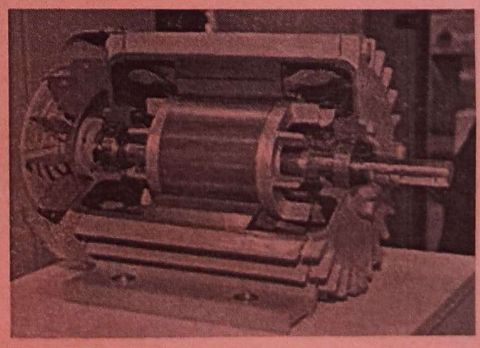
Venue: PEC-Temple Tower -T211

Course Coordinator: D.Boopathi AP/EEE



18EEVC401 REWINDING OF INDUCTION MOTOR

COURSE OBJECTIVES

To enable the students to

- Understand the concept of induction motor
- Acquaire knowledge on coil preparation
- Gain details about insulation preparation

UNIT I SINGLE PHASE INDUCTION MOTOR **10**

Working principle, different method of starting and running (capacitor start, permanent capacitor, capacitor start & run, shaded pole technique). FHP motors, Repulsion motor, stepper motor, Application of single phase motor. Single phase induction motor -

UNIT II COIL PREPARATION **10**

Preparation of the core before winding - Manufacture of formers - Preparation of coils on different types of coil winding machines as applied - Cutting operations on various types of insulating materials used for slot liner, layer Separators, slot wedge, phase, separator etc. and shaping and binding of overhangs.

UNIT III **INSULATION PREPARATION**

Winding Extensive shop floor practice on actual winding, consisting of the following operations - Insertion of insulating materials in the slots, Insertion of coils and folding over the insulation and wedges driving, End connection inclusive of commutator if involved, Soldering / brazing of coil ends of the winding wire and lead cables and core, Overhang banding with cord, steel wire or semi cured polyester glass tape.

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Describe the basics of concept of induction motor
- analyse on coil preparation
- demonstrate insulation preparation

COURSE OBJECTIVES

Enable the students to

- Familiarization of the syntax, semantics, data-types and library functions of numerical computing languages such as MATLAB and/or SCILAB .
- Application of such languages for implementation/simulation and visualization of basic mathematical functions relevant to electronics applications.
- acquire knowledge on programming concepts

UNIT I INTRODUCTION TO MATLAB AND MATLAB SOFTWARE **10**

Brief Introduction- Installation of MATLAB- Use of MATLAB- Key features- Introduction to MATLAB Software- MATLAB window- Command window- Workspace- Command history- Setting directory- Working with the MATLAB user interface- Basic commands- Assigning variables- Operations with variables- Working with script tools- Writing Script file- The MATLAB Editor.

UNIT II MATLAB SIMULINK **10**

Introduction Of Simulink- Simulink Environment & Interface- Study of Library- Circuit Oriented Design- Equation Oriented Design- Model- Subsystem Design- Connect Call back to subsystem- Application

UNIT III MATLAB PROGRAMMING **10**

MATLAB Programming- Writing programs with logic and flow control- Writing functions- Control statement Programming- Conditional Statement Programming- Examples.

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the need for simulation/implementation for the verification of mathematical functions.
- Understand the main features of the MATLAB/SCILAB program development environment to enable their usage in the higher learning.
- Implement simple mathematical functions/equations in numerical computing environment such as MATLAB/SCILAB.

ETHICAL HACKING

Course Duration: 26.11.2018-30.11.2018

Venue: PEC-Temple Tower -T212

Course Coordinator: G.Deivamani AP/EEE

ISCEVC601 ETHICAL HACKING

COURSE OBJECTIVES

To enable the students to

- To impart knowledge on the Ethical hacking terminology
- To examine the different phases involved in ethical hacking
- To learn technologies for footprinting and scanning.

UNIT I INTRODUCTION **10**

Introduction to Ethical Hacking: Problem Definition – Need for Security – Essential Terminology – Elements of Security – Phases – Hacktivism – Modes of Ethical Hacking – Security Testing – Computer Crimes and Implications – Legal Perspective (US Federal Law).

UNIT II FOOTPRINTING AND SCANNING **10**

Defining Footprinting: Information Gathering Methodology – Unearthing Initial Information -Tool: Sam spade – Locate the Network Range – Tool: NeoTrace , Visual Route –Scanning: Detecting 'Live' Systems On Target Defining Footprinting: Information Gathering Methodology – Unearthing Initial Information -Tool: Sam spade – Locate the Network Range – Tool: NeoTrace , Visual Route –Scanning: Detecting 'Live' Systems On Target.

UNIT III ENUMERATION AND SYSTEM HACKING **10**

Introduction to Enumeration – Net Bios Null Sessions – NetBIOS Enumeration – Hacking Tool: DumpSec, NAT, - SNMP Enumeration- Hacking Tool: GetAcct - Active Directory Enumeration - AD Enumeration countermeasures – System Hacking: Administrator Password Guessing – Performing automated password guessing – Tool: Legion.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the risk factors in hacking
- Work with footprinting and scanning
- Hack the system

Course Duration: 04.06.2018-08.06.2018

Venue: PEC-Temple Tower -T213

Course Coordinator: S.Thinesh AP/EEE

INEXC 701 SCADA

COURSE OBJECTIVES

To enable the students to

- Understand the concept of SCADA
- Know the details of deploying SCADA systems
- Gain knowledge about security and vulnerability of SCADA systems

UNIT I SCADA OVERVIEW **10**

Field Data Interface Devices- Communications Network - Central Host Computer -Operator Workstations and Software Components -SCADA Architectures-Monolithic SCADA Systems - Distributed SCADA Systems -Networked SCADA Systems.

UNIT II DEPLOYING SCADA SYSTEMS **10**

Twisted-Pair Metallic Cable -Coaxial Metallic Cable-Fiber Optic Cable-Power Line Carrier –Satellites-Leased Telephone Lines-Very High Frequency Radio-Ultra High Frequency Radio-Point-to-Point-Multiple Address Radio Systems-Spread Spectrum Radio-Microwave Radio.

UNIT III SECURITY AND VULNERABILITY OF SCADA SYSTEMS **10**

Attacks Against SCADA System- Developing a SCADA Security Strategy-SCADA Standards Organizations -The Institute of Electrical and Electronics Engineers (IEEE) - American National Standards Institute-Electric Power Research Institute-International Electrotechnical Comm.

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Describe the concept of SCADA
- analyse the details of deploying SCADA systems
- explain about security and vulnerability of SCADA systems

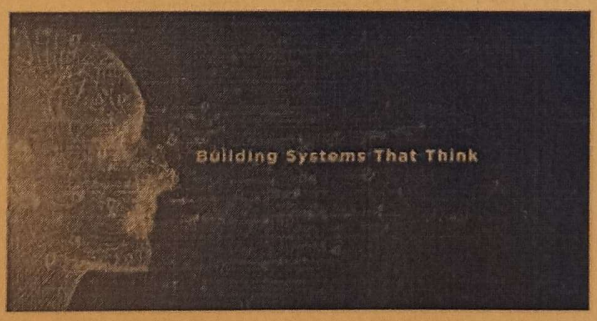
INTELLIGENT SYSTEMS



Course Duration: 26.11.2018-30.11.2018

Venue: PEC-Temple Tower -T213

Course Coordinator: K.K.Poongodi ASP/EEE

ISEEVC801 INTELLIGENT SYSTEMS

COURSE OBJECTIVES

To enable the students to

- To understand the significance of computing methods, their strengths and application areas.
- To perform the computations on various data using appropriate computation tools.
- To know and analysis the issues.

UNIT I FUNDAMENTAL ISSUES IN IS **10**

Definition of AI , History ,Domains AI ,AI problems & State space ,Some examples problems representations like Travelling Salespersons, Syntax analysis Problem. Basic issues to solve AI problems, Underlying assumptions, AI techniques, Level of model, Criteria for success, Control strategies, DFS, BFS

UNIT II HEURISTIC SEARCH TECHNIQUES **10**

Generate & Test, Hill Climbing (simple &stipest), Best first search, A*, AO*, Constraint Satisfaction.

UNIT III KNOWLEDGE REPRESENTATION ISSUES **10**

Syntax & Semantic for Propositional logic, Syntax & Semantic for FOPL, Properties for WFF_s, Resolution Basics : conversion to clausal form ,Resolution of proposition logic, Resolution algorithms for predicates, Problems with FOPL ,Semantic nets ,Frames ,Scripts

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the significance of computing methods, their strengths and application areas.
- Perform the computations on various data using appropriate computation tools.
- Issues are analysed and control measures are studied.

VALUE ADDED COURSE

ON

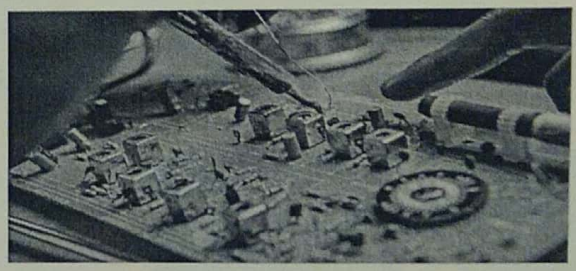
18MEVC301-INTRODUCTION TO ARTIFICIAL INTELLIGENCE

ABOUT THE COURSE:

The primary objective of this course is to introduce the basic principles, techniques, and applications of Artificial Intelligence. Emphasis will be placed on the teaching of these fundamentals, not on providing a mastery of specific software tools or programming environments. Assigned projects promote a 'hands-on' approach for understanding, as well as a challenging avenue for exploration and creativity.

INTENDED AUDIENCE:

- II-, III- and IV-year students those wants to know the basic principle of Artificial intelligence.
- Those wants to know the concepts and application of Artificial intelligence.
- Those wants to know the real time application of the Artificial intelligence.



DURATION OF THE COURSE:

Period: 18.06.2018 to 22.06.2018

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning
3. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.

COURSE IN CHARGES:

1. Mr S.KARTHIKEYAN,ASP/MECH, PEC
2. Mr. THIRUNAVUKARASU,AP/MECH,PEC
3. Mr. M.VINOTHKUMAR,AP/MECH,PEC

VENUE:
SEMINAR HALL II,
PAAVAI ENGINEERING COLLEGE

Note: Interested students enroll their name to the course in charge on or before 13.06.2018.

Scanned by CamScanner

18MEVC301 INTRODUCTION TO ARTIFICIAL INTELLIGENCE

COURSE OBJECTIVES

To enable the students to

- know the basics concept artificial intelligence.
- know the effect artificial intelligence in industry oriented.
- apply AI techniques for different industrial application

1. **Introduction**:

   A brief review of AI history, What is artificial intelligence? , Related research fields , Scope of this course

2. **Production System**

   Production system, Inference engine, Working memory, Knowledge base, Pattern matching,

3. **Ontology**

   What is ontology? , Semantic network, Frame, Structural knowledge, Declarative knowledge, Procedural knowledge.

4. **Fuzzy Logic: Human-like decision making**

   Definition of fuzzy set ,Membership function , Notation of fuzzy set ,Operations of fuzzy set, Fuzzy number and operations , Extension principle , Fuzzy rules , De-fuzzification , Fuzzy control.

5. **Pattern Recognition**

   Concept and concept learning, Pattern classification and recognition. Feature vector representation of patterns. Nearest neighbour based learning. , Discriminant function and decision boundary. Multi-class pattern recognition. , General formulation of machine learning. The k-means algorithm.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of AI
- Apply the concepts for automation of industry.
- Apply the various engineering application.

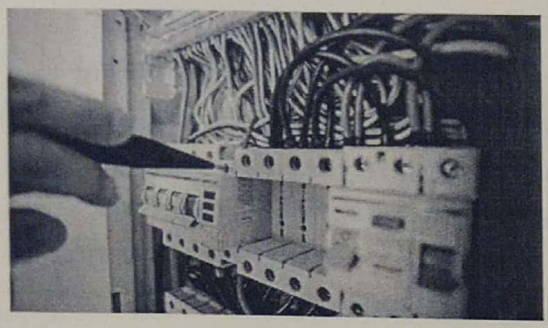
VALUE ADDED COURSE

ON

18MEVC401-INDUSTRIAL ELECTRONICS

ABOUT THE COURSE:



This course is designed as an introduction to the principles of analog and digital electronic circuits and motors for mechanical engineering students, to develop a basic understanding of the operation of circuits containing amplifiers, transistors and diodes. In addition, basic digital circuits and simple microprocessors are discussed to prepare the student for microprocessors systems. The experimental skills developed during the laboratory portion of the prerequisite course together with the theory of this course will enable students to perform basic design and analysis of simple analog and digital electronic circuits and motors covered during this course.

INTENDED AUDIENCE:

- II-, III- and IV-year students those wants to know the basics electronic components.
- Those wants to improve their designing knowledge of electronic components for mechanical systems.
- Those wants to know the assemblage of electronic components to make a complete system.

DURATION OF THE COURSE:

Period: 26.11.2018 to 30.11.2018

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Analyze the steady state and small signal AC response of simple electronic circuits containing diodes, transistors, and operational amplifiers.
2. Apply performance criteria in the design of basic amplifier circuits and verify that the criteria were met.
3. Design and analyze circuits containing digital components and microprocessors.

COURSE IN CHARGES:

1. **Dr.V.SUBBURAM,** ASP/MECH, PEC
2. **Mr.K.VIJAYAKUMAR** AP/MECH,PEC
3. **Mr.S.A.VENKATESH** AP/MECH,PEC

18MEVC401 INDUSTRIAL ELECTRONICS

COURSE OBJECTIVES

To enable the students to

- impart students with analysis of converters and inverters
- outline the formal procedures for relays, heating & welding control
- introduce the concept of process control

1 CONVERTERS AND INVERTERS

Analysis of controlled and fully controlled converters-Dual converters; Analysis of voltage source and current source- current source and series converters

2 DC AND AC MOTOR CONTROL

Method of controlling speed- Basic control circuit-DC motor control- AC motor control

3 SERVO AND STEPPER MOTOR CONTROL

Servo motor control- Stepper motor control- micro controller-based speed control – solid state motor control-PLL control of a DC motor control

4 RELAYS, HEATING CONTROL

Introduction- principle of relays- electromechanical relay- solid state relays- Latching relays timing relays- Induction heating- dielectric heating

5 MOTION CONTROL

Elements of process control- temperature control- Flow control- Level control- Methods of motion control- feedback control- Direct digital control

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- design Analysis of voltage source and current source
- acquire knowledge on the basics about principle of relays
- design the process control of elements

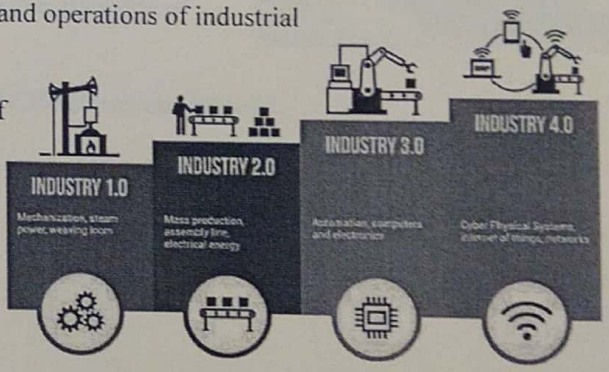
18MEVC501-NEED OF AUTOMATION IN INDUSTRY

ABOUT THE COURSE:

This course gives learners the ability to discuss and understand, at a high level, the techniques and strategies used in industrial automation with robotics projects as well as the capability to make suggestions for the types of robotics hardware that are appropriate for a given task. This course is also an opportunity to receive an introduction to the social, cultural, safety, and financial topics and concepts relevant in industrial automation with robotics.

INTENDED AUDIENCE:

- II-, III- and IV-year students interested in the concept of automation.
- Students those interested to know principle and operations of industrial robots.
- One who wants to know the specific need of automation in industry.



DURATION OF THE COURSE:

Period: 04.06.2018 to 08.06.2018

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

- describe working of various blocks of basic industrial automation system
- connect the peripherals with the PLC
- use various industrial motor drives for the Industrial Automation
- design and validate technological solutions to defined problems and communicate clearly and effectively for the practical application of their work.

COURSE CO-ORDINATOR:

1. Mr. S.A.VENKATESH, AP/MECH, PEC
2. Mr. P.MOHANRAJ, AP/MECH, PEC
3. Mr. N.MANIGANDAN /MECH, PEC

18MEVC501 NEED OF AUTOMATION IN INDUSTRY

COURSE OBJECTIVES

To enable the students to

- know the basics of automation.
- know key elements of automation.
- apply the concepts of automation in industry.

1. **Introduction to Robotic Process Automation**

   Introduction to RPA and Use cases – Automation Anywhere Enterprise Platform – Advanced features and capabilities.

2. **Web Control Room**

   Introduction - Features Panel - Dashboard (Home, Bots, Devices, Audit, Workload, Insights) - Features Panel – Activity (View Tasks in Progress and Scheduled Tasks) - Bots (View Bots Uploaded and Credentials)

3. **Coating methods**

   Roll coating, Reverse roll coating, gravure roll coating, Premiered coatings like extrusion coaters Slide or cascade coaters, curtain coaters, cast Coating

4. **Bot Creator**

   Introduction – Recorders – Smart Recorders – Web Recorders – Screen Recorders - Task Editor – Variables - Command Library – Loop Command – Excel Command – Database Command - String Operation Command

5. **Meta Bot and Bot Insight**

   Introduction - MetaBot Designer - MetaBot With AI Sense - Bot Insight - Transactional Analytics - Operational Analytics - Course Key Points.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of automation in industry.
- Use basic key elements in appropriate place for automation.
- Design and make the industry in complete automation sector.

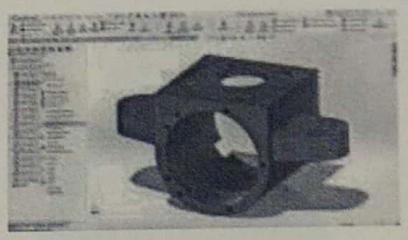
18MEVC601-COMPUTER AIDED DESIGN CREO

ABOUT THE COURSE:

This course aims to help product designers and engineers in developing a product design virtually. Creo is equipped with all the capabilities that are required for completing a product design. This course in Creo will help in sketching, modeling, validation of design, and visualize the product design



INTENDED AUDIENCE:

- II-, III- and IV-year students those who were interested in product design.
- Students those interested to know modelling and assembly of components of a product.
- One who wants to know the specific need of CREO mechanical field.

DURATION OF THE COURSE:

Period: 26.11.2018 to 30.11.2018

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

- apply/develop solutions or to do research in the areas of Design and simulation in Mechanical Engineering.
- developing and applying computer software and hardware to mechanical design and manufacturing fields.
- Review and document the knowledge developed by scholarly predecessors.
- Design and validate technological solutions to defined problems and communicate clearly and effectively for the practical application of their work.

COURSE CO-ORDINATOR:

1. Mr.P.N.MOHANKUMAR,ASP/MECH, PEC
2. Mr. S.MANIKANDAN, AP/MECH, PEC
3. Mr. A.SATHYARAJ/MECH, PEC

18MEVC601 COMPUTER AIDED DESIGN CREO

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling and analysis of mechanical components.

INTRODUCTION

Introduction to CAD, CAE Features of Creo, Concepts:-Modeling ,Parametric , Associative , Feature based Creo Graphical User Interface - Feature manager design tree, , Handles, mouse buttons, keyboard shortcuts, Understanding the Windows Menu Hardware and Software requirements

SKETCHER WORKBENCH

Sketch Entities – Inference line, Centerline line, Line, Circle, Arc, Ellipse, Rectangle, Slots, Polygon, Parabola, Ellipse, Partial Ellipse, Spline, Spline tools, Spline on surface, Equation driven curve, Points, Text, Construction geometry, Snap, grid,

PART MODELING

Creating reference planes Creating Extrude features – Direction1, Direction2, From option, Thin feature, Applying draft, Selecting contours Creating Revolve features – Selecting Axis, Thin features, Selecting contours Creating Swept features-Selecting, Profile and Path, Orientation/twist type, Path Alignment, Guide Curves, Start/End tangency, Thin feature

ASSEMBLY DESIGN

Introduction to Assembly Modeling & Approaches – Top down and Bottom up approach Applying Standard Mates- Coincident, Parallel, Perpendicular, Tangent, Concentric, Lock, Distance, Angle.

DRAFTING AND DETAILING

Inserting Annotations - Datum Features, Geometric Tolerance, Surface Finish, Jog Leaders, Hole Callout, Datum Target, Dowel Pins, Area Hatch, Cosmetic Thread, Balloon, Centre Mark, Centre Lines, Layers, Working With Tables, Bill Of Materials, Hole Table, Sheets And Templates, Sheet Format.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

TEXT BOOK & MANUALS

- Sham Tickoo, Pro / Engineer PTC Creo Parametric 3.0 for Engineers and Designers,Dream tech press 2016

VALUE ADDED COURSE

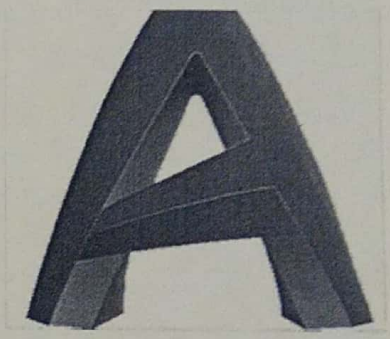
ON

18MEVC701- AUTOCAD

ABOUT THE COURSE:

AutoCAD is globally used by surveyors, designers, engineers, drafters. Globally, AutoCAD has proven as an efficient and user-friendly program. Commercial drafting and computer-aided design(CAD) software applications are AutoCAD. AutoCAD software is recognized internationally for its remarkable editing capabilities, which make it likely to digitally draw building plans or recreate 3D images.

INTENDED AUDIENCE:

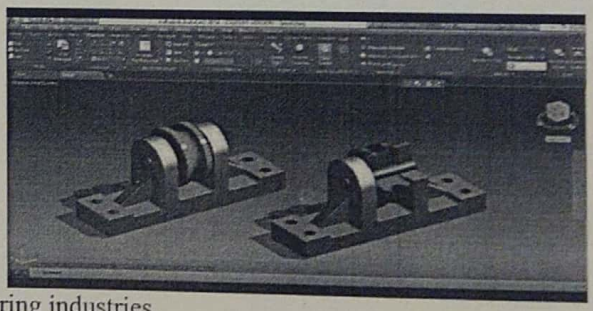


- II-, III- and IV-year students those want to know the concept AUTOCAD software.
- Those wants know about the basic drawing commands and editing commands in AUTOCAD.
- One who wants to know specific application of AUTOCAD in mechanical field.

DURATION OF THE COURSE:

Period: 04.06.2018 to 08.06.2018

Total hours: 30 Hours (6 Hours /day)



COURSE OUTCOMES:

At the end of this course students can be able to

1. Utilize the power and precision of AutoCAD as a drafting and design tool used in the mechanical design and manufacturing industries.
2. Apply basic CAD concepts to develop and construct accurate 2D geometry through creation of basic geometric constructions.
3. Create, manipulate and edit 2D drawings and figures.
4. Apply elements of mechanical drafting such as layers, dimensions, drawing formats, and 2D figures in projects with a focus on ANSI industry standard.

COURSE IN CHARGES:

1. **Mr. K.ANAND,** AP/MECH, PEC
2. **Mr. R.MEIYAZAGAN,** AP/MECH,PEC
3. **Mr.V.ELANGO,** AP/MECH,PEC

COURSE OBJECTIVES

To enable the students to

- utilize the engineering drawing concepts.
- understand the basic 2D diagrams.
- model the materials with different shapes.

1. **Basic Drawing & Editing Commands**
   Using the Mouse, Keyboard, and Enter Key to work quickly and efficiently in AutoCAD Lines Circles Rectangles
2. **Creating a Simple Drawing**
   Creating Simple Drawings Using Object Snap Tracking to extrapolate a projected top view Using Modify tools to arrange an office layout
3. **Drawing Precision in AutoCAD**
   Polar and Ortho Tracking Entering Coordinates and Angles Object Snaps and Tracking.
4. **Making Changes in Your Drawing**
   Move, Copy, Rotate, Mirror, Scale Using the reference option with the Scale Tool
5. **Advanced Object Types**
   Polylines ,Arcs ,Polygons ,Ellipses

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Create the drawing within the printing zone.
- Write the text and hatching in the drawing zone.
- Create the drawing by using advanced tools.

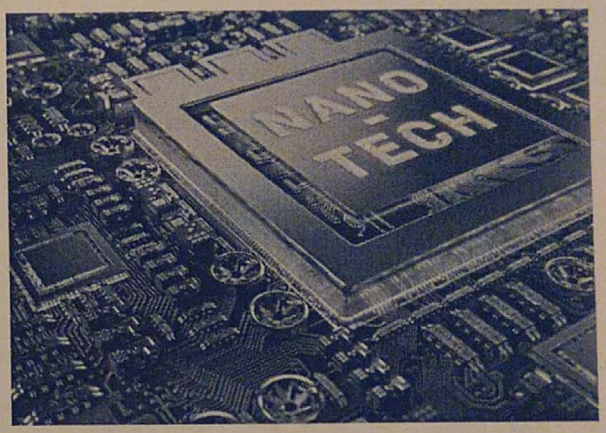
18MEVC801- NANO ELECTRONICS

ABOUT THE COURSE:

The Purpose of the course is to provide students with the basic knowledge in nano electronics. This course emphasize on nano materials, types, synthesis, interconnects and fabrication.

INTENDED AUDIENCE:

- II-, III- and IV-year students those want to know the concept of nano materials.
- Those wants know about the types and inter connection between atomic molecules of nano materials.
- One who wants to know specific application of nano materials in mechanical field.



DURATION OF THE COURSE:

Period: 26.11.2018 to 30.11.2018

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Summarize the types, synthesis, interconnects and applications of carbon nano tubes.
2. Explain the concepts, functions, fabrications and applications of molecular electronics.
3. Identify and apply the suitable nano material for the specific field.

COURSE IN CHARGES:

1. Mr. S.PRABHAKARAN, ASP/MECH, PEC
2. Mr. K.RAMACHANDRAN, AP/MECH,PEC
3. T.SATHEES, AP/MECH,PEC

18MEVC801 **NANO ELECTRONICS**

COURSE OBJECTIVES

To enable the students to

- Have a concept on the scope and recent development of the science and technology of Nano-systems.
- Gain the physical knowledge underlying the operation principles and design of Nano-systems
- Learn some typical or potentially applicable nano-systems at the frontier of the development of the field.

1 INTRODUCTION

Nano and nature - physical scales of nano technology - Genealogy and Philosophy of nano technology - Methods of measuring properties - structure - Microscopy - Spectroscopy.

2 MOLECULAR NANOTECHNOLOGY

Basics of nano-electronics; Nano electronics with tunnelling devices; super conducting devices; Molecular nanotechnology; Applications of MNT

3 NANO ASSEMBLY

Direct self; assembly; device assembly; Electrostatic self; assembly nano tubes; nano wire and carbon 60; Dielectrophoretic nano assembly.

4 ARCHITECTURE

Architecture of MEMS; Requirements of nano systems; Development of nano electronics and structuring;

5 APPLICATIONS

Application of NEMS; Deposition of coatings; Three dimensional materials; Dewatering.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Ability to understand the operation of nano devices; nano systems and their application
- Ability to design the nano devices; nano systems using the NEMS fabrication process.
- Gain a knowledge of basic approaches for various sensor design

18MTVC501 **BASICS OF MAT LAB**

COURSE OBJECTIVES

To enable the students to

- know the basics of MAT LAB
- know how to change data's into matrix form.
- understand how to represent the basic operation and logical operation into MAT LAB codes.

1. **INTRODUCTION**

   Basic of MATLAB, Types of Window, Types of File, Basic Operations.

2. **MATRIX (ARRAY DESIGN)**

   Matrix Operation, Array Design, Array Operation, Multidimensional Array.

3. **SYMBOLIC CALCULATION**

   Symbols, Design Formula, Differentiation, Integration, Solve Equation

4. **OPERATORS**

   Arithmetic Operator, Logical, Relational, Example for above operators.

5. **BRANCH AND LOOP**

   If statement, If-else statement, Else-if statement, Pause, Break, Continue, Switch-case, try-catch, Return Statement For Loop, While Loop.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Open the MAT LAB window and represent the data into Matrix form.
- Write the code for arithmetic operator and logical operators.
- Write code using if- else, While loop for the give statement.

18MTVC601 - ENERGY CONSERVATION AND ITS EFFICIENCY

COURSE CONTENT:

- ✓ ENERGY EFFICIENCY IN BUILDINGS AND ENERGY AUDIT
- ✓ INSTRUMENT FOR ENERGY AUDIT
- ✓ COST BENEFIT ANALYSIS
- ✓ ENERGY AND ITS USE

DATE: 26.11.2018 to 30.11.2018

VENUE: T327

COURSE IN-CHARGE

S. KARTHIK, AP/MCT

S. MANIKANDAN, AP/MCT

18MTVC601 ENERGY CONSERVATION AND IT'S EFFICIENCY

COURSE OBJECTIVES

To enable the students to

- Know familiar with the energy efficient devices.
- Know the various approaches to conserve energy.
- Understand how to approaches efficient energy management.

1. **ENERGY CONSERVATION AND EFFICIENCY**

   Introduction about Bureau of Energy Efficiency and it's Schemes, Energy Rating, Consumption and energy efficient devices Energy Efficiency and its significance

2. **ENERGY EFFICIENCY IN BUILDINGS AND ENERGY AUDIT**

   ECBC and Tips for Energy Conservation, Definition, objective, types and methodology of Energy Audit.

3. **INSTRUMENT FOR ENERGY AUDIT**

   Instruments for Energy Audit, Case studies and Building survey

4. **COST BENEFIT ANALYSIS**

   Arithmetic Operator, Logical, Relational, Example for above operators.

5. **ENERGY AND ITS USE**

   Introduction, Types of Renewable Energy Sources, Electric vehicle.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Differentiate the various energy efficient devices.
- Use of various methods Energy conserve methods.
- Approach the various Energy management techniques

TEXT BOOKS

1. Energy Conservation and Audit by Mr. Amit L. Nehete.

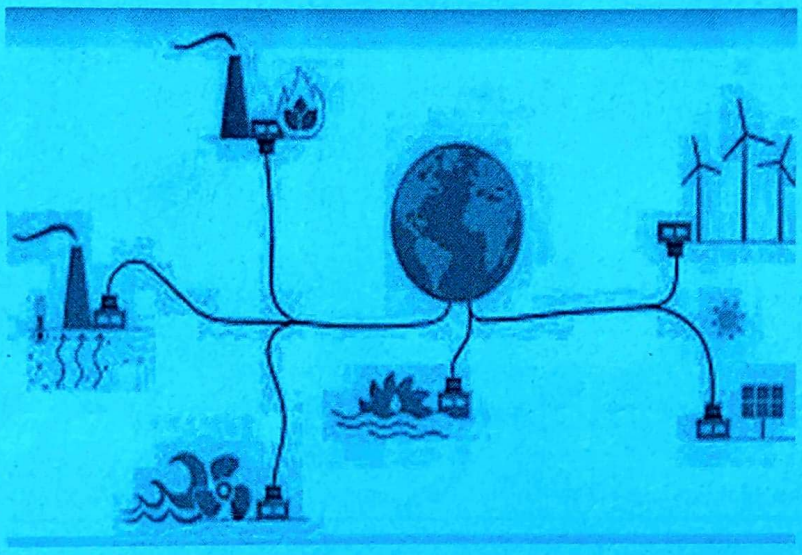
VALUE ADDED COURSE

18MTVC701 - RENEWABLE ENERGY SYSTEMS

COURSE CONTENT:

- ✓ ROLE OF ENERGY STORAGE
- ✓ LEAD ACID BATTERIES
- ✓ LITHIUM BATTERIES
- ✓ CHEMICAL ENERGY STORAGE



DATE : 4.6.2018 to 8.6.2018

VENUE: T326

COURSE IN-CHARGE

M. RAMESH, AP/MCT

C. SUMITHRA, AP/MCT

18MTVC701 RENEWABLE ENERGY SYSTEMS

COURSE OBJECTIVES

To enable the students to

- know the need of energy storage.
- know different form of energy storage system.
- Understand the concepts and application of energy storage.

1. **INTRODUCTION TO RENEWABLE ENERGY SYSTEMS AND THE ROLE OF ENERGY STORAGE**

   History of energy storage from the perspective of the carbon cycle. Natural process of photosynthesis, Biomass, peat, and fossil carriers, and finish in the time of renewables.

2. **ENERGY STORAGE CLASSIFICATION**

   storage and energy storage systems, application and how they are classified according to physical, temporal and economic criteria

3. **LEAD ACID BATTERIES**

   Electro-chemical energy storage the terms batteries and accumulators, electrodes, electrolyte Ion-conductive phase.

4. **LITHIUM BATTERIES**

   Electro-chemical energy storage the terms batteries and accumulators, electrodes, electrolyte Ion-conductive phase for lithium batteries.

5. **CHEMICAL ENERGY STORAGE I**

   Chemical energy storage is the backbone of the conventional energy supply. Solid (wood & coal), fluent (crude oil) and gaseous (natural gas) energy carriers are different types of energy storage

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Select suitable energy storage system depending on necessity.
- Use relevant storage system for particular application.
- Differentiate the various storage system.

TEXT BOOKS

1. Energy Storage Systems and Components, Alfred Rufer.

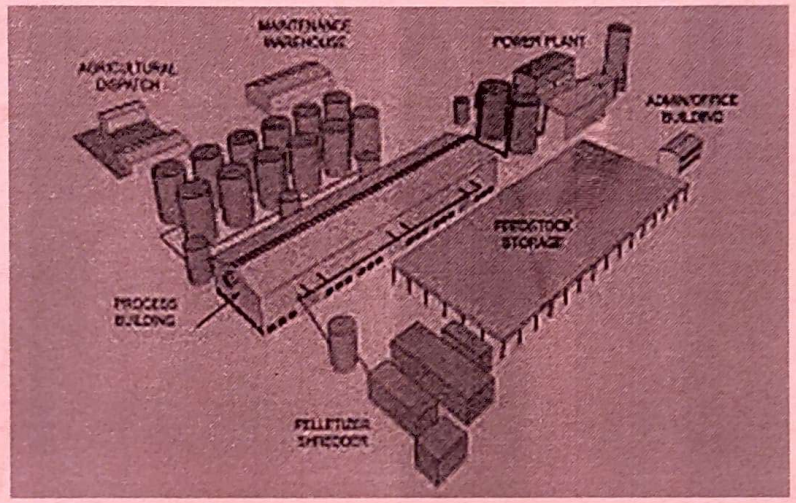
18MTVC801 - PLANT DESIGN, LOCATION AND LAYOUT

COURSE CONTENT:

- ✓ PROCESS DESIGN ASPECTS
- ✓ SELECTION OF PROCESS EQUIPMENT
- ✓ PROCESS AUXILIARIES AND PROCESS UTILITIES
- ✓ PLANT LOCATION AND LAYOUT



DATE : 26.11.2018 to 30.11.2018

VENUE: T326

COURSE IN-CHARGE

R.T. AJAY KARTHIK, AP/MCT

G. RAJA, AP/MCT

18MTVC801 PLANT DESIGN, LOCATION AND LAYOUT

COURSE OBJECTIVES

To enable the students to

- know the basics of plant design.
- know need of plant designing.
- design the plant for new industrial sector.

1. **INTRODUCTION**

   Basic considerations in engineering plant design, optimization and feasibility of plant design.

2. **PROCESS DESIGN ASPECTS**

   Selection of process-factors affecting process selection. Types of project design, Importance of Laboratory development pilot plant, safety factors, types of flow diagrams.

3. **SELECTION OF PROCESS EQUIPMENT**

   Standard versus special equipment-material of construction for process equipment, selection criteria, and specification sheets.

4. **PROCESS AUXILIARIES AND PROCESS UTILITIES**

   Piping design, layout, and supports for piping insulations. Pipe fittings, types of valves, selection of valves, process control and instrumentation control system design

5. **PLANT LOCATION AND LAYOUT**

   Factors affecting plant location, factors in planning layouts, principles of plant layout, use of scale models.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of plant design for an industry.
- Apply the concepts for making plant designing for an industry.
- Represent the designing structure of the plant.

18CMVC801-LIFE SKILLS FOR ENGINEERS

COURSE OBJECTIVES

To enable the students to

To develop communication competence in prospective engineers.

- To enable them to convey thoughts and ideas with clarity and focus

Communication Skill: Introduction to Communication, The Process of Communication, Barriers to Communication, Listening Skills, Writing Skills, Technical Writing, Letter Writing, Job Application, Report Writing, Non-verbal Communication and Body Language, Interview Skills, Group Discussion, Presentation Skills, Technology-based Communication.

Critical Thinking & Problem Solving: Creativity, Lateral thinking, Critical thinking, Multiple Intelligence, Problem Solving, Six thinking hats, Mind Mapping & Analytical Thinking.

Teamwork: Groups, Teams, Group Vs Teams, Team formation process, Stages of Group, Group Dynamics, Managing Team Performance & Team Conflicts.

TOTAL PERIODS	**30**

COURSE OUTCOMES

At the end this course, students will be able to

- To create an awareness on Engineering Ethics and Human Values.
- To instill Moral and Social Values, Loyalty and also to learn to appreciate the rights of others.
- To learn leadership qualities and practice them.

ANALYSIS OF DOMESTIC AND WASTE WATER

on June 04th to 08th 2018

Venue: Temple Tower T-304

Course Coordinator

G. Srinivasan

Professor& Head, Chemical Engineering

18CMVC601-ANALYSIS OF DOMESTIC AND WASTE WATER

COURSE OBJECTIVES

To enable the students to

- understand the basic characteristics of wastewater
- Understanding the kinetics of biological system
- Understand the design and working principle of various treatment methods

Objectives of wastewater treatment, characteristics, flow variations, types of reactors and reactors analysis. Wastewater Treatment Flow Diagrams and Hydraulic Profile.

Wastewater treatment – aerobic, anaerobic, suspended and attached growth systems. Kinetics of biological treatment systems

Theoretical principles and design considerations – suspended growth system - conventional activated sludge process and its modifications. Theoretical principles and design considerations – attached growth system – trickling filter, bio-towers and rotating biological contactors.

TOTAL PERIODS	**30**

COURSE OUTCOMES

At the end this course, students will be able to

- know the basic characteristics of wastewater and the kinetics of biological system.
- Understand the design and working principle of various treatment methods
- Outline the types of reactors used in waste water treatment

TEXT BOOKS

1. "Wastewater Engineering - Treatment and Reuse", Metcalf and Eddy Inc., (2003), 4th Edition, Tata McGraw Hill Publishing Co. Ltd., New Delhi.

on November 26th to 30th 2018

Venue: Temple Tower T-303

Course Coordinator

D. Sreenivasan

Assistant Professor, Chemical Engineering

18CMVC501-TESTING OF PETROLEUM DISTILLATES

COURSE OBJECTIVES

To enable the students to gain knowledge on

- theoretical principles and experimental procedures for quantitative estimation
- the environmental and sustainability issues

- Introduction: Overview of petroleum exploration in India,
- Introduction to Geophysical/Geological methods used in petroleum exploration.
- Determination of acidity of petroleum
- Determination of smoke point and in flammability of petroleum & petroleum products
- Determination of Specific gravity and API gravity of petroleum and petroleum products
- Determination of flash point and fire point of petroleum products
- Aromatioc content Determination
- Carbon residue determination
- Foaming characteristics of tube oil
- Mercaptan as sulphur estimation
- Corrosion testing of petroleum oils and copper

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Outline the petroleum exploration techniques
- Determine different properties of petroleum products
- Analyze the coking tendency of oil

TEXT BOOKS

1. Modern Petroleum Refining Processes, Bhaskara Rao, 3rd Edition, Oxford & IBH Publication, Reprint, 1999.

D. Sreenivasan

Assistant Professor, Chemical Engineering

18CMVC401-MATLAB FOR CHEMICAL ENGINEERS

COURSE OBJECTIVES

- To enable the students to gain knowledge on
- Material balance & energy balance equations for a system with multiple unit operations with and without chemical reaction
- To solve vapor-liquid equilibrium relationship for ideal and non-ideal liquid mixture

- Formulate number of independent material balance equations of the system for degree of freedom analysis.
- Solution of the set of linear/nonlinear equations using MATLAB user defined functions such as, matrix solver, fsolve, etc.
- Study of temperature and level dynamics of a stirred tank heater
- Dynamics of state variables (temperature of each tank) with the help of transient analysis.
- Computation of bubble point temperature of ideal liquid mixture.
- Transient analysis in a non-adiabatic CSTR using lumped parameter model.
- Transient analysis in a PFR using distributed parameter model.

TOTAL PERIODS	**30**

COURSE OUTCOMES

At the end this course, students will be able to

- Formulate number of independent material balance and energy balance equations of the system for degree of freedom analysis.
- Solve the set of linear/nonlinear equations using MATLAB user defined functions such as, matrix solver, fsolve, etc.
- Solve the energy balance equations using MATLAB user defined functions

PLASTIC TECHNOLOGY

on November 26th to 30th 2018

Venue: Temple Tower T-312

Course Coordinator

S.Nagul Dev

Assistant Professor, Chemical Engineering

18CMVC301-PLASTIC TECHNOLOGY

COURSE OBJECTIVES

To enable the students to gain knowledge on

- principles of Plastic technology
- Different Moulding techniques
- Applications of Plastic moulding

INTRODUCTION Basic principles of processing - shape and size – Effect of polymer property on processing – Newtonion and Non-Newtonion fluids - Rheology of polymer melts.

COMPRESSION MOULDING & TRANSFER MOULDING Basic principles of compression and transfer moulding- Bulk factor and flow properties as applied to moulding materials- Types of compression mould-Common moulding faults and their correction Finishing of mouldings. Fundamental principles of transfer moulding-advantages over compression moulding- Equipment used

INJECTION MOULDING Principles processing outline - Process variables - Mould cycle - Machinery used – Parts and functions –Specifications - Construction and maintenance - Start-up and shut down procedures

TOTAL PERIODS	**30**

COURSE OUTCOMES

At the end this course, students will be able to

- Acquire the knowledge of processing of plastic materials by injection moulding, extrusion, and blow moulding
- Understand processing techniques like compression molding and transfer moulding of thermoset plastics.

TEXT BOOKS

1. Injection Molding Hand Book By Rusto,D.V &Rosato, D.V Plastic Engineering Hand Book & D–5 By Society of Plastic Industry Inc.,2000..

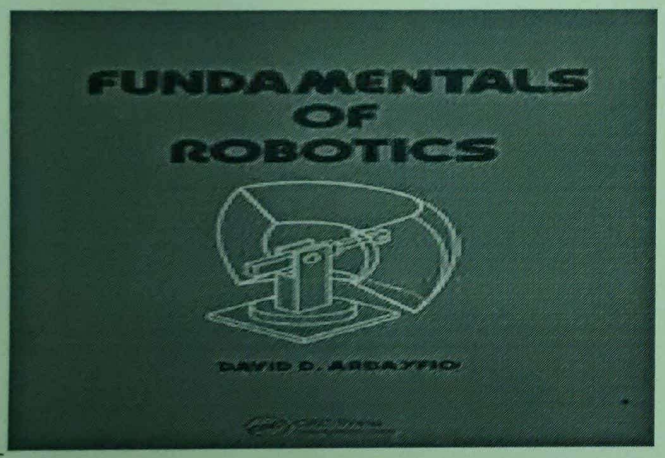
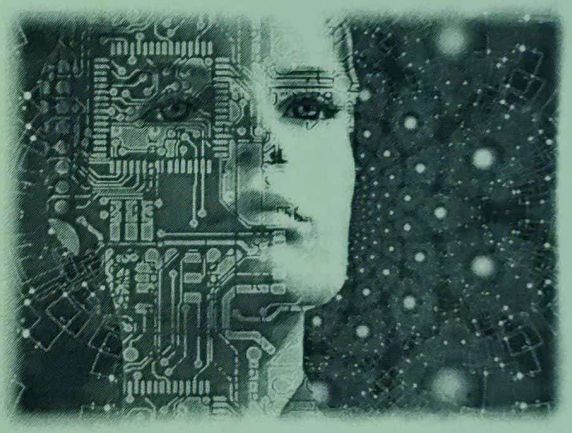
18ITVC301 & FUNDAMENTALS OF ROBOTICS

Robotics deals with the design, construction, operation, and use of robots and computer systems for their control, sensory feedback, and information processing. A robot is a unit that implements this interaction with the physical world based on sensors, actuators, and information processing.





COURSE CONTENT

- BASIC CONCEPTS
- DIRECT AND INVERSE KINEMATICS
- MANIPULATOR DIFFERENTIAL MOTION AND STATICS

INTENDED AUDIENCE:

- **II Year of B.E/B.Tech Students**

Date: 18.06.2018 to 22.06.2018
Venue: Class Room no-M311

COURSE COORDINATORS

1. S.SARAVANAKUMAR, AP/IT

2 V.SARAVANABHAVAN, AP/IT

18ITVC301 FUNDAMENTALS OF ROBOTICS

COURSE OBJECTIVES

To enable the students to

- To introduce the functional elements of Robotics
- To impart knowledge on the direct and inverse kinematics
- To introduce the manipulator differential motion and control

UNIT I BASIC CONCEPTS

Brief history-Types of Robot–Technology-Robot classifications andSpecifications-Design and control issues- Various manipulators – Sensors -work cell – Programminglanguages.

UNIT II DIRECT AND INVERSE KINEMATICS

Mathematical representation of Robots - Positionand orientation – Homogeneoustransformation Various joints- Representation using the DenavitHattenberg parameters

UNIT III MANIPULATOR DIFFERENTIAL MOTION AND STATICS

Linear and angular velocities-Manipulator Jacobian-Prismatic and rotary joints–Inverse -Wrist and arm singularity - Static analysis –Force and moment Balance.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Ability to understand basic concept of robotics.
- To analyze Instrumentation systems and their applications to various
- To know about the differential motion add statics in robotics

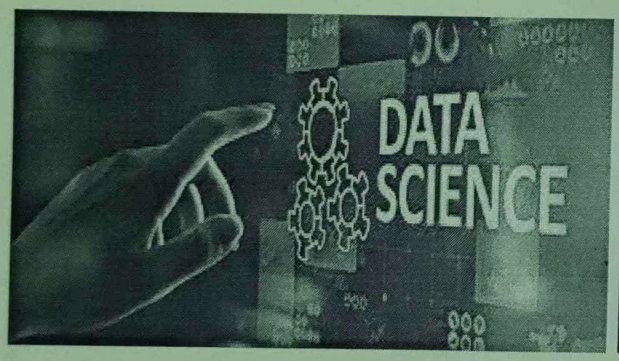
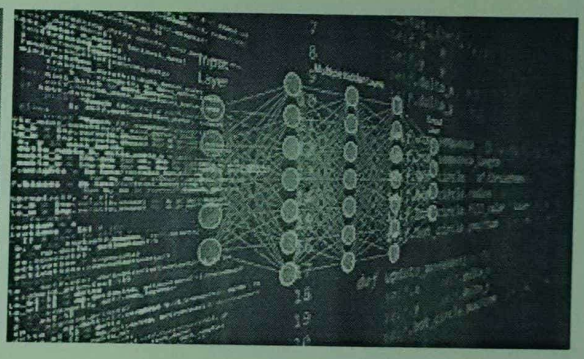
18ITVC501 & INTRODUCTION TO DATA SCIENCE

Introduction to the basic concepts of data science; presents effective methods of data visualization and summary statistics to explore complex data; and reviews probability theory, with an emphasis on conditional probability as a foundation of modern computational statistical methods and AI.





COURSE CONTENT

- Introduction to Data Science
- Rule Induction Introduction
- To Streams Concepts

INTENDED AUDIENCE:

- **III Year of B.E/B.Tech Students**

Date: 04.06.2018 to 08.06.2018
Venue: Class Room no-M310

COURSE COORDINATORS

1. M.PUSHPALATHA, AP/IT
2. K.VIDHYA, AP/IT

18ITVC501 INTRODUCTION TO DATA SCIENCE

COURSE OBJECTIVES

To enable the students to

- To know the fundamental concepts of data science
- To learn various techniques for mining data streams
- To learn Event Modelling for different applications.

UNIT I INTRODUCTION TO DATA SCIENCE

Introduction to Data Science – Applications - Data Science Process – Exploratory Data analysis – Collection of data – Graphical presentation of data – Classification of data – Storage and retrieval of data.

UNIT II DATA MINING TECHNIQUES

Rule Induction - Neural Networks: Learning and Generalization - Competitive Learning - Principal Component Analysis and Neural Networks

UNIT III MINING DATA STREAMS

Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Work with big data platform and its analysis techniques.
- Design efficient algorithms for mining the data from large volumes.
- Model a framework for Human Activity Recognition

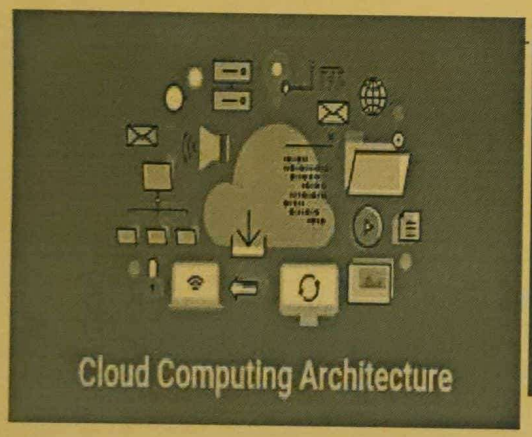
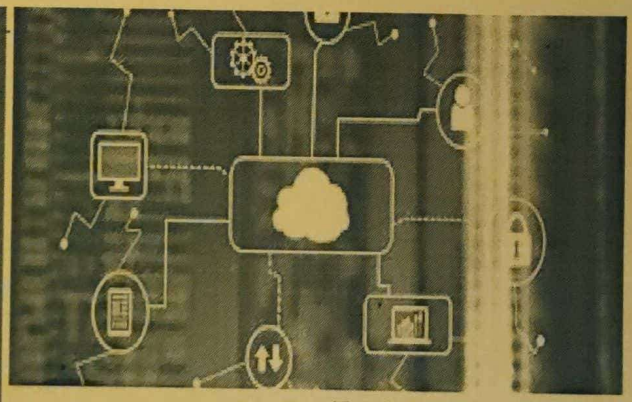
18ITVC601 & CLOUD COMPUTING ARCHITECTURE.

Cloud computing architecture refers to the components and subcomponents required for cloud computing. These components typically consist of a front end platform (fat client, thin client, mobile), back end platforms (servers, storage), a cloud based delivery, and a network (Internet, Intranet, Intercloud).





COURSE CONTENT

- Cloud components
- Cloud Insights Architectural influences
- Cloud Architecture

INTENDED AUDIENCE:

- **III Year of B.E/B.Tech Students**

Date: 26.11.2018 to 30.11.2018
Venue: Class Room no-M310

COURSE COORDINATORS

1. R.JAYAVADIVEL, ASP/IT

2. D.YOGAPRIYA, AP/IT

18ITVC601 CLOUD COMPUTING ARCHITECTURE

COURSE OBJECTIVES

To enable the students to

- Course gives students an insight into the basics of cloud computing along with virtualization
- Understand the Overview Origins of Cloud computing basic
- Provide the students basic understanding about cloud and virtualization along with it how one can migrate over it.

Module-1

Cloud Computing Overview Origins of Cloud computing – Cloud components - Essential characteristics – On-demand selfservice, Broad network access, Location independent

Module-2

Cloud Insights Architectural influences – High-performance computing, Utility and Enterprise grid computing, Cloud scenarios – Benefits: scalability ,simplicity ,vendors ,security, Limitations – Sensitive information

Module-3

Cloud Architecture- Layers and Models Layers in cloud architecture, Software as a Service (SaaS), features of SaaS and benefits, Platform as a Service (PaaS), features of PaaS and benefits.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Course gives students an insight into the basics of cloud computing along with virtualization.
- Understand about cloud and virtualization along with it how one can migrate over it.
- Implement the students basic understanding about cloud and virtualization along with it how one can migrate over it.

18ITVC701 INTERNET OF THINGS USING RASPBERRY PI

COURSE OBJECTIVES

To enable the students to

- Elucidates concepts related to Internet of Things
- The students will get handson experience in working with Raspberry Pi 3 and exploring IoT.
- To understand about the concept of RPi

UNIT I

Overview of IoT Understanding IoT fundamentals , IOT Architecture, protocols ,Various Platforms for IoT ,Real time Examples of IoT ,Overview of IoT components and IoT Communication Technologies

UNIT II

Getting started with Raspberry Pi Introduction to Raspberry Pi , Comparison of various Rpi Models Understanding SoC architecture and SoCs used in Raspberry Pi , Pin Description of Raspberry Pi , On-board components of Rpi, Projects using Raspberry Pi

UNIT III

Booting Up RPi Operating System and Linux Commands, Linux- Introduction, Architecture, File System,Raspbian O.S.- Introduction, Tools like Leafpad Editor, Installing Raspbian on Pi, First boot and Basic Configuration of Pi, Popular Linux Commands

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- completion of the course, the students will be able to understand the working of Raspberry Pi.
- features and how various components can be used with Pi.
- Implement the concept of RPi

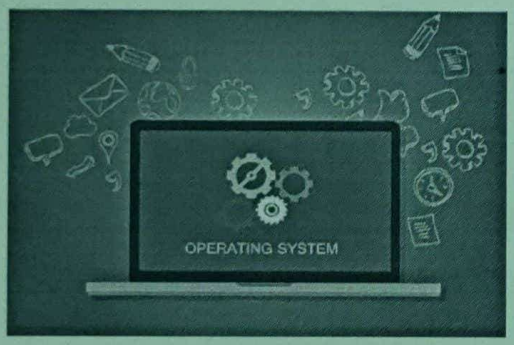
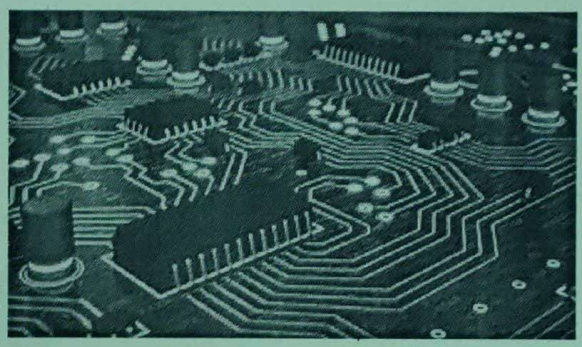
18ITVC801 & BASICS OF OS & RTOS

A real-time operating system (RTOS) is an operating system (OS) intended to serve real-time applications that process data as it comes in, typically without buffer delays. Processing time requirements (including any OS delay) are measured in tenths of seconds or shorter increments of time.





COURSE CONTENT

- Semaphore, Pipes, FIFO,
- Real-time concepts
- Intertask Communication

INTENDED AUDIENCE:

- **IV Year of B.E/B.Tech Students**

Date: 26.11.2018 to 30.11.2018
Venue:Computer Lab.

COURSE COORDINATORS

1. M.PUSHPALATHA, ASP/IT
2. K.VIDHYA, AP/IT

18ITVC801 BASICS OF OS & RTOS

COURSE OBJECTIVES

To enable the students to

- understanding of the techniques essential to the design and implementation of device drivers and kernel internals of embedded operating systems.
- Provides the students with an understanding of the aspects of the Realtime systems.
- Provide an understanding of the techniques essential to the design and implementation of real-time embedded systems.

Module 1

Embedded OS (Linux) Internals Linux internals: Process Management, File Management, Memory Management, I/O Management. Overview of POSIX APIs, Threads – Creation, Cancellation, POSIX Threads Inter Process Communication – Semaphore, Pipes, FIFO, Shared Memory Kernel: Structure, Kernel Module Programming

Module 2

Open source RTOS Basics of RTOS: Real-time concepts, Hard Real time and Soft Real-time, Differences between General Purpose OS & RTOS, Basic architecture of an RTOS

Module 3

VxWorks / Free RTOS VxWorks/ Free RTOS Scheduling and Task Management – Realtime scheduling, Task Creation, Intertask Communication, Pipes, Semaphore, Message Queue, Signals, Sockets, Interrupts

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the Embedded Real Time software that is needed to run embedded systems
- Understand the open source RTOS and their usage
- Understand the VxWorks RTOS and realtime application programming with it.

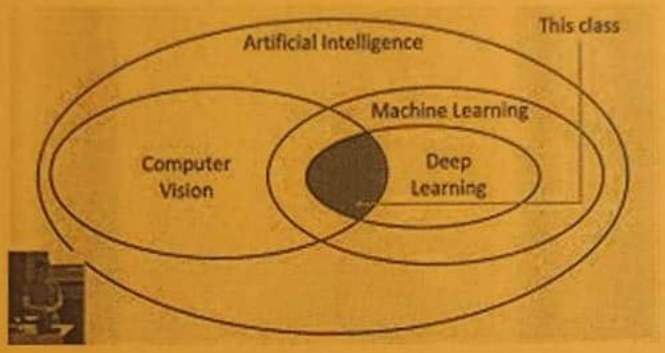
18PCEVC101 - DEEP LEARNING FOR COMPUTER VISION

Deep learning methods can achieve state-of-the-art results on challenging computer vision problems such as image classification, object detection, and face recognition. In this new E-book written in the friendly Machine Learning Mastery style that you're used to, skip the math and jump straight to getting results.



INTENDED AUDIENCE

- I, II – Year M.E, M. Tech Students

Date: 21.08.2019 to 26.08.2019

Venue: Class Room No: Ground Floor Computer Lab

COURSE CO-ORDINATOR

J. Karthik, AP/CSE

18PCEVC101 DEEP LEARNING FOR COMPUTER VISION

COURSE OBJECTIVES

To enable the students to

- Understand the concept of deep learning.
- Know the concept of recurrent neural networks
- Design the concept of neural network

Module 1

- Introduction to Image Formation, Capture and Representation
- Linear Filtering, Correlation, Convolution.
- Visual Features and Representations
- Scale Space and Scale Selection; SIFT, SURF; HoG, LBP, etc.
- Visual Matching
- Pyramid Matching; Optical Flow

Module 2

- Deep Learning Review:
- Learning, Multi-layer Perceptrons
- Backpropagation
- Convolutional Neural Networks (CNNs)
- Visualization and Understanding CNNs

Module 3

- Recurrent Neural Networks (RNNs)
- Attention Models
- Deep Generative Models
- Recent Trends:

TOTAL PERIODS 30

COURSE OUTCOMES

- understand the concept of deep learning.
- Know the concept of recurrent neural networks
- Design the concept of neural network

Venue: M212

18PCOVC101 **PATENT WRITING AND PUBLISHING**

COURSE OBJECTIVE

To enable the students to

- formulate the research problems
- understand writing the patent and publishing the patent.

Unit-Introduction to formulating research problems **15**

Defining and formulating the research problem, selecting the problem, necessity of defining the problem, Importance of literature review in defining a problem, literature review-primary and secondary sources, reviews, monograph, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, development of working hypothesis

Unit II – Report writing and publications **15**

Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report-Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports, copy right, royalty, trade related aspects of intellectual property rights (TRIPS); scholarly publishing-IMRAD concept and design of research paper, citation and acknowledgement, plagiarism, reproducibility and accountability.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- identify research problems and literature review.
- patent report writing and designing the research papers.

TEXT BOOK

1. Trochim, W.M.K., 2005. Research Methods: the concise knowledge base, Atomic Dog Publishing. 270p.
2. Wadehra, B.L. 2000. Law relating to patents, trademarks, copyright designs and geographical indications. Universal Law Publishing.

PLAGIARISM CHECKING

Date: 21.01.2019 to 25.01.2019

Course Co-ordinator: Mrs.P.Krishnasudha

Venue: M212

18PCOVC201 **PLAGIARISM CHECKING**

COURSE OBJECTIVE

To enable the students to

- authorized by another person but represented as the student's own work, whether that material is paraphrased or copied in verbatim or near-verbatim form
- Submit someone's own previously written report without necessary acknowledgment.

Unit- I Research Ethics, IPR and Scholar Publishing **15**

Ethics-ethical issues, ethical committees (human & animal); IPR- intellectual property rights and patent law, commercialization, copy right, royalty, trade related aspects of intellectual property rights (TRIPS); scholarly publishing- IMRAD concept and design of research paper, citation and acknowledgement, plagiarism, reproducibility and accountability

Unit II – The Plagiarism **15**

Literature Review and Proper Use of E-Resources, Using Design thinking Methods to Avoid Plagiarism, Different forms of plagiarism, Writing Quality Academic Publications: Challenges to avoid plagiarism, Scientific Reading, Cite and Write, Report writing using popular word processing packages such as MS word, Open Office etc. Style Manuals and Bibliographies, Introduction to Reference Management Tools, Features and Functionalities of Anti-Plagiarism Software, Detection of Plagiarism by using Different Online Tools, Plagiarism Policies, Penalties and Consequences

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- given when using one of the following in your own research paper, i.e another person's idea, opinion, or theory.
- any pieces of information that are not common knowledge

TEXT BOOK

1. Wadehra, B.L. 2000. Law relating to patents, trademarks, copyright designs and geographical indications. Universal Law Publishing.

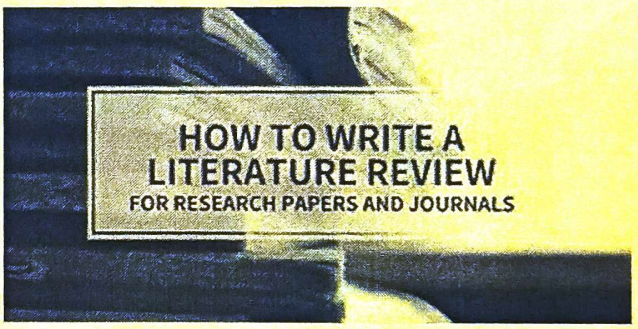
NEED FOR LITERATURE SURVEY



Date: 18.06.2018 to 22.06.2018

Course Co-ordinator: Mr.G.Kumaran

Venue: M212

18PCOVC301 **NEED FOR LITERATURE SURVEY**

COURSE OBJECTIVE

To enable the students to

- describe how the proposed research is related to prior research in statistics Multimedia Packages
- show the originality and relevance of your research problem. Specifically, your research is different from other statisticians

Unit-I **Introduction to Research** **15**

Motivation and objectives – Research methods vs. Methodology. Types of research – Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical, concept of applied and basic research process, criteria of good research, Defining and formulating the research problem, selecting the problem, necessity of defining the problem.

Unit II **The Literature Review** **15**

What is a literature review and why is it necessary, An Outline for Preparing a Literature Review, Reading the literature, importance of literature review in defining a problem, literature review-primary and secondary sources, reviews, monograph, patents, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, Update your list of references, Presentation.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- an overview of the subject, issue, or theory under consideration, along with the objectives of the literature review,
- an explanation of how each work is similar to and how it varies from the others

TEXT BOOK & MANUALS

1. Garg, B.L., Karadia, R., Agarwal, F. and Agarwal, U.K., 2002. An introduction to Research Methodology, RBSA Publishers.

VALUE ADDED COURSE

ON

18PEDVC01- ENERGY CONSERVATION AND EFFICIENCY

ABOUT THE COURSE:

This course introduces the academic approach of Sustainability and explores how today's human societies can endure in the face of global change, ecosystem degradation and resource limitations. The course focuses on key knowledge areas of sustainability theory and practice, including population, ecosystems, global change, energy, agriculture, water, environmental economics and policy, ethics, and cultural history.

INTENDED AUDIENCE:

1. I and II year PG students those interested in energy conservation techniques.
2. Those wants to know the design procedure of energy conservation elements.
3. Those wants to apply the concept of energy conservation in real time application.

DURATION OF THE COURSE:

Period: 17.09.2018 to 21.09.2018

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. obtain knowledge about energy conservation policy, regulations and business practices
2. analyse energy systems from a supply and demand perspective
3. recognize opportunities for enabling rational use of energy
4. apply knowledge of Energy Conservation Opportunities in a range of contexts
5. develop innovative energy efficiency solutions and demand management strategies

COURSE CO-ORDINATOR:

Mr. P.PUGALENTHI, AP/MECH

VENUE:

Seminar Hall I,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 10.09.2018.

Scanned by CamScanner

18PEDVC01 ENERGY CONSERVATION AND EFFICIENCY

COURSE OBJECTIVES

To enable the students to

- Know familiar with the energy efficient devices.
- Know the various approaches to conserve energy.
- Understand how to approaches efficient energy management.

1. **Energy Conservation and Efficiency**

   Introduction , About Bureau of Energy Efficiency and it's Schemes, Energy Rating , consumption and energy efficient devices Energy Efficiency and its significance

2. **Energy Efficiency in Buildings and Energy Audit**

   ECBC and Tips for Energy Conservation, Definition, objective, types and methodology of Energy Audit

3. **Instrument for Energy Audit**

   Instruments for Energy Audit ,Case studies and Building survey

4. **Cost Benefit Analysis**

   Arithmetic Operator, Logical, Relational, Example for above operators.

5. **Energy and its use**

   Introduction, Types of Renewable Energy Sources ,Electric vehicle

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Differentiate the various energy efficient devices.
- Use of various methods Energy conserve methods.
- Approach the various Energy management techniques

TEXT BOOKS

1. Energy Conservation and Audit by Mr. Amit L. Nehete

REFERENCES

ON

18PEDVC02-ENERGY STORAGE

ABOUT THE COURSE:

This course examines two very important energy storage applications for the future: grid scale electricity and batteries. Learn about the chemistry and materials science behind these solutions, as well as the economics that influence their development.

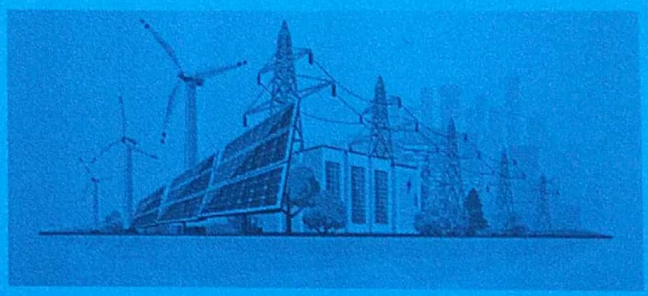
INTENDED AUDIENCE:

1. I and II year PG students those interested in production and storage of energy.
2. Those wants to know the design procedure of energy storage elements.
3. Those wants to apply the concept of energy storage in our day to day life.

DURATION OF THE COURSE:

Period: 28.01.2019 to 01.02.2019

Total hours: 30 Hours (6 Hours /day)



COURSE OUTCOMES:

At the end of this course students can be able to

1. understand the working principle of solar photovoltaic cell, fuel cells & biofuels.
2. do testing and performance analysis of photovoltaic cell under standard test condition.
3. apply knowledge of Energy Conservation Opportunities in a range of contexts.
4. develop innovative energy efficiency solutions and demand management strategies

COURSE CO-ORDINATOR:

Mr. A.NATARAJAN, AP/MECH

VENUE:

Seminar Hall II,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 25.01.2019

Scanned by CamScanner

18PEDVC02 **ENERGY STORAGE**

COURSE OBJECTIVES

To enable the students to

- Know the need of energy storage.
- Know different form of energy storage system.
- Understand the concepts and application of energy storage.

1. **Introduction to Renewable Energy Systems and the Role of Energy Storage**

   History of energy storage from the perspective of the carbon cycle. Natural process of photosynthesis, Biomass, peat, and fossil carriers, and finish in the time of renewables.

2. **Energy Storage Classification**

   storage and energy storage systems, application and how they are classified according to physical, temporal and economic criteria

3. **Lead Acid Batteries**

   Electro-chemical energy storage the terms batteries and accumulators, electrodes, electrolyte Ion-conductive phase.

4. **Lithium Batteries**

   Electro-chemical energy storage the terms batteries and accumulators, electrodes, electrolyte Ion-conductive phase for lithium batteries.

5. **Chemical Energy Storage I**

   Chemical energy storage is the backbone of the conventional energy supply. Solid (wood & coal), fluent (crude oil) and gaseous (natural gas) energy carriers are different types of energy storage

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Select suitable energy storage system depending on necessity.
- Use relevant storage system for particular application.
- Differentiate the various storage system.

ENVIRONMENTAL IMPACT ASSESSMENT

Course Duration:18.06.2018-22.06-2018

Venue: PEC-Temple Tower -T206

Course Coordinator: Dr.G.Saravanakumar Prof/EEE

18PPEVC301 **ENVIRONMENTAL IMPACT ASSESSMENT**

COURSE OBJECTIVES

To enable the students to

- provide the indepth knowledge on Environment and Its impact on the surroundings when a major project is being carried out in a location.
- provide the basic knowledge on Environmental impact assessment (EIA) and its legal requirements
- know the implications of EIA in maintaining the global environmental management plan

UNIT I INTRODUCTION **10**

Environmental Impact Assessment (EIA) - Environmental Impact Statement (EIS) -Environmental Risk Assessment(ERA) - Legal and Regulatory aspects in India – Types and limitations of EIA - Terms of Reference in EIA- Issues in EIA- national – cross sectoral - social and cultural.

UNIT II ENVIRNMENTAL ANALYSIS AND ASSESSMENT TECHNIQUES **10**

Components - screening - setting - analysis - prediction of impacts - mitigation. Matrices - Networks - Checklists.Importance assessment techniques - cost benefit analysis - analysis of alternatives - methods for Prediction and assessment of impacts - air - water - soil - noise - biological - cultural - social - economic environments. Standards and guidelines for evaluation.

UNIT III ENVIRONMENTAL IMPACT ASSESSMENT EVALUATION **10**

Trends in EIA practice and evaluation criteria - capacity building for quality assurance. Expert System in EIA - use of regulations and AQM.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- explain the basic things about Environmental Impact assessment and its relevance to the Legal and regulatory aspects.
- describe about the EIA and various assessment techniques and standard involved in decision making process.
- apply and practice the EIA management system. with the proper guideline and evaluation criteria

ANALYSIS OF INVENTORY SYSTEMS

Course Duration:08.01.2019-12.01-2019

Venue: PEC-Temple Tower -T208

Course Coordinator: C.Arulkumar ASP/EEE

18PPSVC201 ANALYSIS OF INVENTORY SYSTEMS

COURSE OBJECTIVES

To enable the students to

- analyze the basic concepts of inventory theory.
- understand the different types of deterministic inventory models.
- develop probabilistic inventory models in several aspects.

UNIT I DETERMINISTIC INVENTORY SYSTEM 10

Introduction – Types of Inventory – Costs and factors of inventory – Basics of constrained and unconstrained optimization - Economic Order Quantity (EOQ) model with and without shortages – Economic Production Quantity (EPQ) model with and without shortages.

UNIT II EXTENSIONS OF DETERMINISTIC INVENTORY SYSTEM 10

Multi product Inventory system – Constraints of Inventory system – Inventory model with one and multiple Price Break – Inventory with variable Setup/or Ordering cost - Integrated Procurement Production (IPP) model - EOQ and EPQ model with various demand patterns.

UNIT III PROBABILISTIC INVENTORY SYSTEM 10

Inventory problem with uncertain demand – Forecasting demand - One period inventory problem – Probabilistic scheduling period - Uncertain received quantity model - Probabilistic order level system - Dynamic order quantity – Controllable lead time.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- State the objectives of inventory system and recognize their impact on cost and service.
- Use optimization techniques to minimize total inventory system cost in deterministic environment.
- Use inventory-theoretic models to design optimal supply chain management.

ADVANCED GRAPH THEORY

Course Duration:18.06.2018-22.06-2018

Venue: PEC-Temple Tower -T207

Course Coordinator: Mr.M.Raja AP/EEE

18PPSVC301 ADVANCED GRAPH THEORY

COURSE OBJECTIVES

To enable the students to

- familiarize the students in the field of distance in graphs and its applications.
- introduce types of digraphs and various matrix representations.
- expose the students to flows in networks.

UNIT I DISTANCE IN GRAPHS **10**

The center of a graph - Distant vertices - Locating Numbers - Detour and Directed distance - Channel assignment

UNIT II DIRECTED GRAPHS **10**

Types of digraphs - Digraphs and binary relations - Directed paths and connectivity - Euler digraphs - Trees withdirected edges - Fundamental circuits in digraphs - Matrices A,B and C of Digraph - Adjacency matrix of a Digraph.

UNIT III NETWORK FLOWS **10**

Cut sets - Some properties of a cut set - All cut sets in a graph - Fundamental circuits and cuts sets - Connectivity andseparability Network flows - 1-Isomorphism - 2-Isomorphism.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Familiar with the concept of distance in graphs and its applications.
- Acquire the knowledge of types of digraphs and the matrix representations.
- Acquire the concept of Domination in graphs and applications.

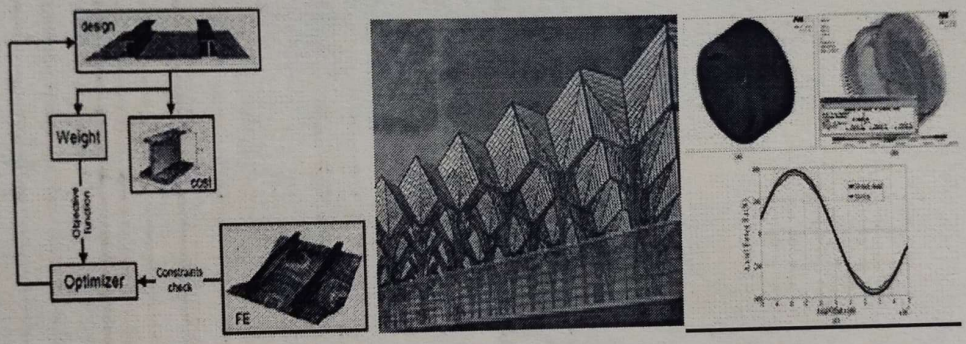
18PSEVC301 - OPTIMIZATION TECHNIQUES IN STRUCTURAL ENGINEERING



- Design optimization is more than reducing weight. It's about maximizing performance and efficiency of material application while minimizing life-cycle cost.
- Finite Element technology provides us with tools for structural design optimization throughout several design phases.Techniques that attempt to improve or find the best mechanical structures such as size, shape and topology optimization is discussed here.

Date : 04.06.2018 to 08.06.2018

Venue: T225

Course Incharge:

Ms.S.Sharmiladevi AP/Civil

18 PSEVC301 OPTIMIZATION TECHNIQUES IN STRUCTURAL ENGINEERING

COURSE OBJECTIVES

To enable the students to

- understand the theory of optimization methods and algorithms developed for solving various types of optimization problems.

Introduction to Optimization: Introduction - Historical developments – Engineering applications of Optimization - Statement of an Optimization problem - Classification of Optimization problems - Optimization Techniques. Optimization by calculus: Introduction - Unconstrained functions of a single variable - Problems involving simple constraints - Unconstrained functions of several variables - treatment of equality constraints – Extension to multiple equality constraints - Optimization with inequality constraints - The generalized Newton-Raphson method.

Network Analysis: Introduction - Elementary graph theory - Network variables and problem types - Minimum-cost route - Network capacity problems - Modification of the directional sense of the network - Application of Optimization techniques to trusses, Beams and Frames.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- formulate optimization models for a wide range of civil engineering problems and able to solve them.

TEXT BOOKS

18BAVC101 INTRODUCTION TO BUSINESS ANALYTICS

COURSE OBJECTIVES

to enable the students to

- To understand the purpose of using business analysis tools within an organization, dataset for making a business decisions and R studio for data analysis.
- Know the business Applied artificial intelligence and Visual analysis
- Analyse the data and stature of the business

COURSE CONTENT

Unit I Introduction to Business Analytics and Big Data Business Analytics – Definition - Need – Scope - A categorization of Analytical Methods – Analytics in action – Big data – Business analytics in practice – types of data – modifying data in excel – creating Distributions from data– measures of location

Unit II Application of Business Analytics Machine Learning - Introduction and Concepts - Differentiating algorithmic and model based frameworks, Decision analytics. Descriptive analytics - Predictive analytics - Prescriptive analytics. Faculty of Arts Department of Business Administration

Unit III Decision support and Data Visualisation DSS- Executive and enterprise support- Automated decision support - Web analytics- Data mining -Applied artificial intelligence - Visual analysis: Data concepts – Data Dashboards - Data exploration & visualization - Scorecards

Unit IV Time Series and Forecasting Time series pattern – forecasting 18PPSVC101

determining the best forecasting model to use - building good spreadsheet model – What-If analysis – some useful excel functions for modeling – auditing spreadsheet model – a simple maximization problem.

Unit V Data Analysis using R R Studio: Introduction – R data types and objects, reading and writing data - Data structures in R - R programming fundamentals - Advantages and disadvantages

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Critically analyze the business problems especially solves business problems.
- Students can able to understand the applications of business analytics.
- They have get ideas on data visualization and time series analysis.

18BAVC201 SMALL BUSINESS MANAGEMENT

COURSE OBJECTIVES

to enable the students

- To impart knowledge in project management tools and techniques practiced in a project.
- To provide exposure in the methods adopted in identifying a new project and to know the difference between pre-feasibility and feasibility study.
- To understand the role of entrepreneur in the Indian context and to expose to the importance of small scale industry.

COURSE CONTENT

Unit I Project Planning Definition of project – Classifications of projects – Importance – Scope – Project Identification – Idea generation and Screening – Project selection and Planning – Project Formulation – Project life cycle – Project Organisation – Roles and Responsibilities of project manager – Managing project team.

Unit II Project Feasibility and Project Finance and Evaluation Pre–feasibility study – Mar ket and Demand analysis – Feasibility Study: Technical – Commercial – Environmental – Socio economic – Managerial and Financial analysis – Detailed Project Report – Resource Survey – Selection of plant location – Project contracts

Unit III Introduction to Entrepreneur Definition – Concept – Classification and types of entrepreneurs – Entrepreneurial Traits – Need and Important – Roles and Responsibilities of Entrepreneurs in Indian business context – Entrepreneurial Motivation – Entrepreneurial Development Programme: Role and objectives of the programme – Contents

Unit IV Entrepreneurship Environment and Challenges Entrepreneurship environment: Social – Cultural – Political – Natural – Geographic – Technological – Economic Environment and its impact on Entrepreneurship – Factors affecting entrepreneurial growth – Globalization and its challenges – Steps to face global challenges – Strategies for the development of women entrepreneurs.

Unit V Small Business Management Small Enterprises – Definition – Classification – Characteristics – Ownership Structures – Steps involved in setting up a small business – Identifying and selecting a good Business opportunity – Market potential analysis – Marketing methods: Pricing and Distribution methods.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Generate new methods to identify a project.
- Analyse the project organization structure.
- Critically evaluate the reasons for the sickness in small scale industry

18BAVC301 BLOCK CHAIN TECHNOLOGY

COURSE OBJECTIVES

to enable the students to

- To assess blockchain applications in a structured manner.
- To impart knowledge in block chain techniques and able to present the concepts clearly and structured.
- To get familiarity with future currencies and to create own crypto token.

COURSE CONTENT

unit I Basic Concepts Introduction - Decentralized society - Disturbed Database, Byzantine General problem - Fault tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete - P2P network - Private key - Public key - Cryptography - Hash Function - Digital Signature - ECDSA - Memory Hard Algorithm - Zero Knowledge Proof.

Unit II Block Chain Introduction - Advantage over conventional distributed database - Network and protocols - Block chain network - Mining - Mechanism - Life Cycle of Block chain - Distributed consensus - Merkle Patricia Tree - Gas Limit - Department of Business Administration Faculty of Arts 67 Transactions and Fee - Anonymity - Reward - Chain policy- Life of Block chain applications -Soft and Hard Fork - Private and Public blockchain.

Unit III Distributed Consensus Nakamoto consensus - Proof of work - Proof of Stake - Proof of Burn - Difficulty level - Sybil Attack - Energy Utilization and alternate - Fabric model - SDKs - Components of Fabric Model - Architecture of Hyperledger fabric.

Unit IV Cryptocurrency History - Distributed ledger - Bitcoin protocols - Mining strategy and rewards - Ethereum - construction - Truffle - DAO - dApps - Smart Contract - Boot strapping - GHOST Vulnerability - Attacks - Sidechain - Namecoin.

Unit V Cryptocurrency Regulations Stakeholders - Roots and Bitcoin - Legal As pects - Crypto currency exchange - Black market and Global economy. Applications : IoT - Medical Record Management system - Domain Name Service and future of Blockchain - Business applications and assessing blockchain projects.

TOTAL PERIODS 30

OURSE OUTCOMES

t the end this course, students will be able to

- Understand the various technologies and its business use.
- Analyse the block chain applications in a structure manner.
- Explain the modern concepts of block chain technology systematically.

TEXT BOOKS

1. Paul Vigna and Michael J.Casey.

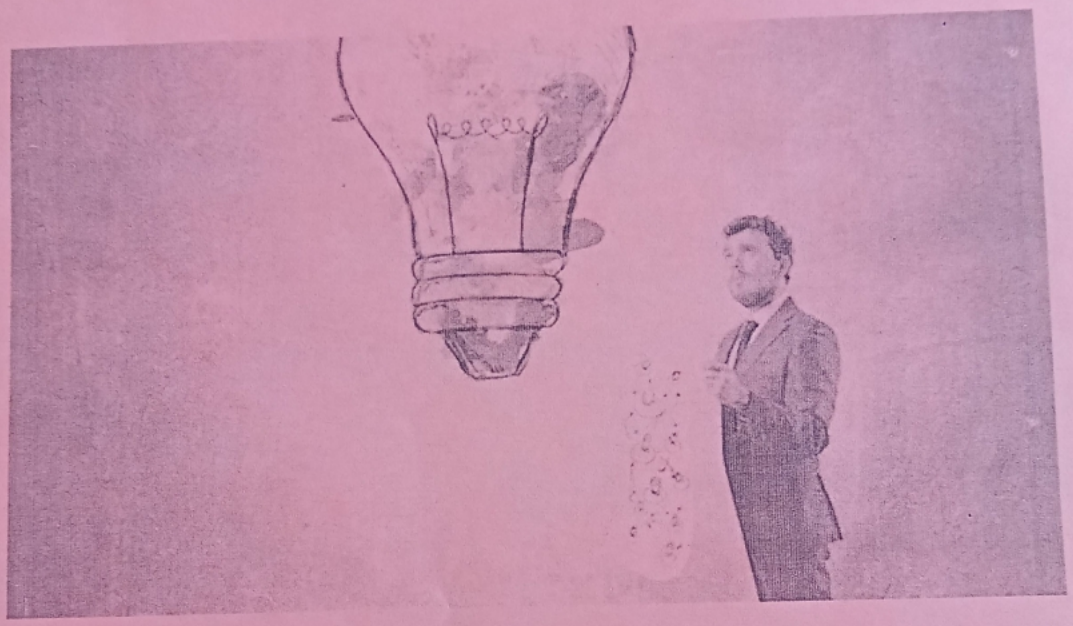
DEPARTMENT OF MASTER OF BUSINESS ADMINISTRATION

VALUE ADDED COURSE

EMOTIONAL INTELLIGENCE



Date: 16.02.2019 to 21.02.2019

Venue: classroom

COURSE INCHARGE

1. **DR.R.RATHI DEVI,** PROFESSOR/MBA

HEAD OF THE DEPARTMENT
Management Studies
PAAVAI ENGINEERING COLLEGE
VH-7, PACHAL (Po) Namakkal - 637

18BAVC401 EMOTIONAL INTELLIGENT IN MANAGEMENT

COURSE OBJECTIVES

To enable the students to

- Know the concepts of EQ & IQ
- Learn the method of stress management
- Learn the correlates of IE

COURSE CONTENT

Introduction to emotion- intelligence & wisdom- Correlates of emotional intelligence Concept, theory, measurement and applications of intelligence- motional intelligence: concept, theory and measurements- Correlates of emotional intelligence Emotional intelligence, culture, schooling and happiness -For enhancing emotional intelligence EQ mapping -Managing stress, suicide prevention, through emotional intelligence- spirituality and meditation- Application of emotional intelligence at family, school and workplace

TOTAL PERIODS 30

COURSE OUTCOMES

to the end this course, students will be able to

- Map the EQ of individual
- Manage stress and control emotions
- Apply EI in both official and document setup

TEXT BOOKS

1. NDaniel Goleman's Books on Emotional Intelligence

REFERENCES

1. Primal Leadership: Unleashing the Power of Emotional Intelligence

(AUTONOMOUS)

DEPARTMENT OF MASTER OF COMPUTER APPLICATIONS

ARDUINO PROGRAMMING

VALUE ADDED COURSE

ABOUT THE COURSE:

- **Arduino** is a project, open-source hardware, and software platform used to design and build electronic devices. It designs and manufactures microcontroller kits and single-board interfaces for building electronics projects.
- The **Arduino** boards were initially created to help the students with the non-technical background.
- The designs of **Arduino** boards use a variety of controllers and microprocessors.

COURSE OUTCOMES:

At the end this course, students will be able to

- design and implement Embedded system
- implement the Concept of digital and analog ports
- analyse about basic concepts of Arduino

DATE & VENUE :

26.11.2018 to 30.11.2018, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Mrs.S.Kasthuri, AP/MCA

Mrs.D.Kokilarani, AP/MCA

18CAVC101 ARDUINO PROGRAMMING

COURSE OBJECTIVES

To enable the students to

- understand about embedded system
- learn about Concept of digital and analog ports
- understand about basic concepts of arduino

UNIT I Introduction

Introduction to embedded system - Understanding Embedded System - Overview of basic electronics and digital electronics - Microcontroller vs. Microprocessor - Common features of Microcontroller - Comparison between the two - Different types of microcontrollers

UNIT II Getting Started with Arduino

Introduction to Arduino - Pin configuration and architecture - Device and platform features - Concept of digital and analog ports - Familiarizing with Arduino Interfacing Board - Introduction to Embedded C and Arduino platform

UNIT III Review of Basic Concepts

Arduino data types - Variables and constants – Operators - Control Statements - Arrays - Functions

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- design and implement Embedded system
- implement the Concept of digital and analog ports
- analyze about basic concepts of Arduino

TEXT BOOKS

1. Exploring Arduino: Tools and Techniques for Engineering Wizardry 1st Edition

REFERENCES

1. Beginning C for Arduino, Second Edition: Learn C Programming for the Arduino Paperback, July 2015

(AUTONOMOUS)

DEPARTMENT OF MASTER OF COMPUTER APPLICATIONS

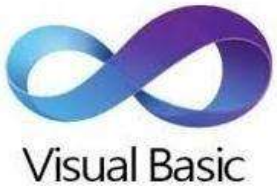
PROGRAMMING IN VISUAL BASIC

VALUE ADDED COURSE

ABOUT THE COURSE:

- Microsoft **Visual Basic** is a powerful software development system for creating applications that run in Windows XP and Windows Vista. With Visual Basic, you can do the following:
  - Create applications with graphical windows, dialog boxes, and menus.
  - Create applications that work with databases.
  - Create Web applications and applications that use Internet technologies.
  - Create applications that display graphics.

COURSE OUTCOMES:



At the end this course, students will be able to

- implement the concept of NET Framework
- implement creating of database using VB.NET
- analyse the concept of VB Language

DATE & VENUE :

04.06.2018 to 08.06.2018, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Mrs.S.Kasthuri, AP/MCA

Mrs.D.Kokilarani, AP/MCA

18CAVC201 **PROGRAMING IN VISUAL BASIC**

COURSE OBJECTIVES

To enable the students to

- understand about the concept of NET Framework
- be familiar with creating of database using VB.NET
- study about VB Language

UNIT I Introduction to VB.NET

Event Driven Programming, NET as better Programming Platform, NET Framework, NET Architecture, The Just-In-Time Compiler, NET Framework class library

UNIT II VB.NET Development Environment

Creating Applications, Building Projects, Using simple components, Running VB.NET applications

UNIT III Mastering VB Language

Data, Operators, Conditionals and Loops, Procedures, Error Handling, Classes and Objects.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- implement the concept of NET Framework
- implement creating of database using VB.NET.
- analyze the concept of VB Language

TEXT BOOKS

1. Introduction: Visual BASIC 6.0, Gary Haggard, Wade Hutchison, Christy Shibata, Steven Holzner, Lou Tylee, Bookboon (2012)

DEPARTMENT OF SCIENCE AND HUMANITIES

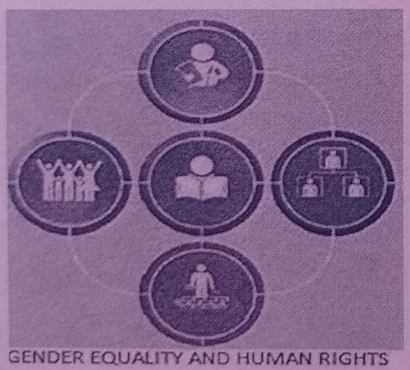
GENDER EQUALITY AND HUMAN RIGHTS

ABOUT THE COURSE:

- This course will explore women's participation in activism and how gender-based discrimination encouraged women to voice their discontent about traditional gender roles and also Human Rights is all about human rights which create equality among all citizens irrespective of the differences such as caste, religion, gender, race etc. These rights are fundamental to all citizens and are given under the constitution of India.

GENDER EQUALITY AND HUMAN RIGHTS

INTENDED AUDIENCE:



GENDER EQUALITY AND HUMAN RIGHTS

- All the first year of B.E.,B.Tech students
- Who have curiosity in developing strengthen the rights of humans

Course coordinator: **Mrs.C.Manjula/AP,Maths**

18GEVC101/201 GENDER EQUALITY AND HUMAN RIGHTS

COURSE OBJECTIVES

To enable the students to

- To search, analyse, and work with legally relevant information by using the juridical, comparative and other specific methods
- Learn how to work cooperatively in groups.
- enable them to engage in policy decisions to remove gender biases in all fields of life in the process of gender equality for nation building

MODULE 1: Gender theory and law

Approaches to gender and law, Gender theory, Conflict, integrationist and hermeneutic approaches, Feminist theory, Human rights of women and legal theory, Feminist jurisprudence, Legal and gender expertise

MODULE 2: Gender equality and human rights

Gender and human rights theory, History of human rights movements, Suffrage movements, International treaties and prohibition of gender-based discrimination, EU human rights law and gender

MODULE 3: Gender equality and labour law

Current challenges for Genderequality, Anti-gender movements, Biopolitics and legal instruments of body control. Sexual violence in conflict. Challenges to human rights of women, women and austerity.

TOTAL PERIODS 30

COURSE OUTCOMES

Students must gain knowledge on

- how to work with information (search, evaluate, use information, necessary for fulfilment of scientific and professional tasks, from various sources, including application of the systematic approach)
- professional activities in the international environment
- the removal of gender biases in all fields of life in the process of gender equality for nation building

18GEVC101/201 INDIAN CONSTITUTION AND ADMINISTRATION

COURSE OBJECTIVES

To enable the students to

- understand themostdiversifiedlegaldocument ofIndiaand philosophy behindit.
- thinking towards basic understanding of the Organs of Governance and its implications for engineers.
- learn about the role and function of election commission

MODULE 1 : INTRODUCTION ABOUTINDIAN CONSTITUTION

Meaning of the constitution law and constitutionalism, Historical Background of the ConstituentAssembly, Government of India Act of 1935 and Indian Independence Act of 1947,EnforcementoftheConstitution,IndianConstitutionanditsSalientFeatures,ThePreambleoftheConstitution.

MODULE 2: LOCAL ADMINISTRATION

Local Administration: District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation. Pachayati raj: Introduction, PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials.

MODULE 3: CONSTITUTIONAL RIGHTS & DUTIES

Contours of Constitutional Rights & Duties: Fundamental Rights , Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

TOTAL 30 PERIODS

COURSE OUTCOMES

At the end this course, students will be able to

- IdentifyandexplorethebasicfeaturesandmodalitiesaboutIndianconstitution
- Understand the various organs of Indian governance.
- Gain knowledge on election commission of India

COMPUTER AIDED ANALYSIS FLUENT

ABOUT THE COURSE:

Ansys Fluent gives you more time to innovate and optimize product performance. Trust your simulation results with software that has been extensively validated across a wide range of applications

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why FLUENT?

- User-Friendly Interface
- Single Window, Streamlined Workflow
- Parallel Capabilities for Meshing and Solving
- **Course Content:**

Introduction to

- CFD
- COUPLED SOLVER AND TRANSONIC FLOW
- TURBULENCE MODEL
- RADIATION AND CONVECTION

Date: 17.07.2017 to 21.07.2017

Venue:

Software lab,

Core Engineering Block

Paavai Engineering College

Ansys

FLUENT

Course Incharge

- Ms. MALARVIZHI AP/Aero,PEC

17AEVC301 COMPUTER AIDED ANALYSIS FLUENT

COURSE OBJECTIVES

To enable students to

- know about the fundamentals and applications of CFD and Ansys Fluent.
- gain knowledge incoupled solver and transonic flow in Ansys Fluent.

INTRODUCTION TO CFD

Introduction to CFD- CFD theory fundamentals and applications-ANSYS Fluent application-Fluent Simulation process - ANSYS Fluent GUI and Software preliminaries- Solver fundamentals-Boundary conditions-Flow mix and heat transfer (3D)-Geometry in design modeler-Meshing using ANSYS Meshing application-CFD Simulation setup-Models-Defining regions-Material definition-Cell zone conditions-Extracting preliminary results.

COUPLED SOLVER AND TRANSONIC FLOW

Flow mix and heat transfer (3D) –Coupled solver – Mesh adaption – Transonic flow – Airfoil - CFD Simulation setup – Models - Defining regions - Material definition – Solution – Post Processing.

TURBULENCE MODEL

Turbulence model in Fluent – Setting up model – Materials and operating conditions – Solution extraction – Convergence modeling.

PERIODIC HEAT FLOWAND TURBULENT FLOW

Modeling Periodic heat Flow – Creation of zones – Model setup – Material definition – Cell zone definitions – Periodicity definition – Boundary conditions – Solution extraction – Advanced post processing. Turbulent flow in heat exchanger – Model setup – Boundary conditions – Solving – Post Processing.

RADIATION AND CONVECTION

Radiation and Convection - Model setup – Thermal boundary conditions - Solution - Post Processing. Siphoning using Multiphase – Review, test and Project discussion.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- know the Ansys Fluent GUI and software preliminaries and solver fundamentals.
- learn about coupled solver, material definitions and post processing in Fluent.

DEPARTMENT OF AERONAUTICAL ENGINEERING

COMPUTER AIDED DESIGN CREO

ABOUT THE COURSE:

Creo is the industry standard 3D CAD software for product design and development. Putting Creo into the hands of students empowers the next generation of engineers to design, analyze, simulate, and bring their ideas to life.

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why CREO?

- User-Friendly Interface
- Design on any device, anywhere, anytime
- Collaborate with others in real time

Course Content:

Introduction to

- SKETCHER WORKBENCH
- PART MODELING
- ASSEMBLY DESIGN

Date: 27.11.2017 to 01.12.2017

Venue:

Software lab,
Core Engineering Block
Paavai Engineering College

creo

Course Incharge

- Ms.A.Anupriya AP/Aero,PEC

17AEVC401 **COMPUTER AIDED DESIGN CREO**

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling and analysis of mechanical components.

INTRODUCTION

Introduction to CAD, CAE Features of Creo, Concepts:-Modeling ,Parametric , Associative , Feature based Creo Graphical User Interface - Feature manager design tree, , Handles, mouse buttons, keyboard shortcuts, Understanding the Windows Menu Hardware and Software requirements

SKETCHER WORKBENCH

Sketch Entities – Inference line, Centerline line, Line, Circle, Arc, Ellipse, Rectangle, Slots, Polygon, Parabola, Ellipse, Partial Ellipse, Spline, Spline tools, Spline on surface, Equation driven curve, Points, Text, Construction geometry, Snap, grid,

PART MODELING

Creating reference planes Creating Extrude features – Direction1, Direction2, From option, Thin feature, Applying draft, Selecting contours Creating Revolve features – Selecting Axis, Thin features, Selecting contours Creating Swept features-Selecting, Profile and Path, Orientation/twist type, Path Alignment, Guide Curves, Start/End tangency, Thin feature

ASSEMBLY DESIGN

Introduction to Assembly Modeling & Approaches – Top down and Bottom up approach Applying Standard Mates- Coincident, Parallel, Perpendicular, Tangent, Concentric, Lock, Distance, Angle.

DRAFTING AND DETAILING

Inserting Annotations - Datum Features, Geometric Tolerance, Surface Finish, Jog Leaders, Hole Callout, Datum Target, Dowel Pins, Area Hatch, Cosmetic Thread, Balloon, Centre Mark, Centre Lines, Layers, Working With Tables, Bill Of Materials, Hole Table, Sheets And Templates, Sheet Format.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

TEXT BOOK & MANUALS

COMPUTER AIDED DESIGN-UNIGRAPHICS

ABOUT THE COURSE:

Unigraphics software is a flexible and powerful integrated solution that helps you deliver better products faster and more efficiently. It delivers the next generation of design, simulation, and manufacturing solutions that enable companies to realize the value of the digital twin.

Who Can Join?

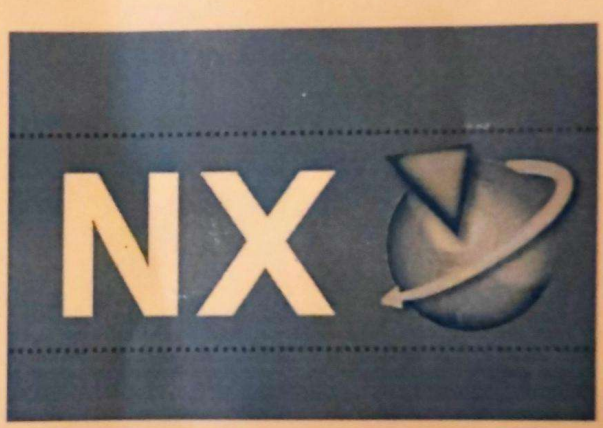
- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a software specialist.
- Product developers.

Why Unigraphics?

- UG gives you an integrated toolset that coordinates disciplines,
- preserves data integrity and design intent
- Streamlines the entire process.

Course Content:

- Introduction to
- ASSEMBLY DESIGN
- DRAFTING AND DETAILING



Date: 27.06.2017 to 1.07.2017

Venue:

Software lab,

Core Engineering Block

Paavai Engineering College

Course Incharge

- Mr. R.Prabhakar AP/Aero,PEC

COMPUTER AIDED DESIGN UNIGRAPHICS

17AEVC501

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling
- understand the analysis of mechanical components.

INTRODUCTION

Introduction, Sketch, Curve, Curve Operations, Form Feature, Feature Operation, Transform

ASSEMBLY DESIGN

Assembly of Components, Exploded Views, Sequencing, Context Control, Cloning and Component arrays editing, Top Down Assembly.

DRAFTING AND DETAILING

Drawing sheets, Views, Dimensioning, Annotations, Symbols, Tabular note and Part list.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modeling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, and function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

DEPARTMENT OF AERONAUTICAL ENGINEERING

COMPUTER AIDED DESIGN-SOLIDWORKS

ABOUT THE COURSE:

SOLIDWORKS is Premium software integrates a broad range of mechanical CAD, design validation, product data management, design communication, and CAD productivity tools in a single, affordable, easy to use package.

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a software specialist.
- Out of box thinkers.

Why Solid Works?

- Solid Works is relatively easy to learn in comparison to other solid modellers.
- It is the most popular solid modeller,
- You have more job choices available to you.

Course Content:

- Introduction to
  - Sketching
  - Part modelling
  - Assembly modelling

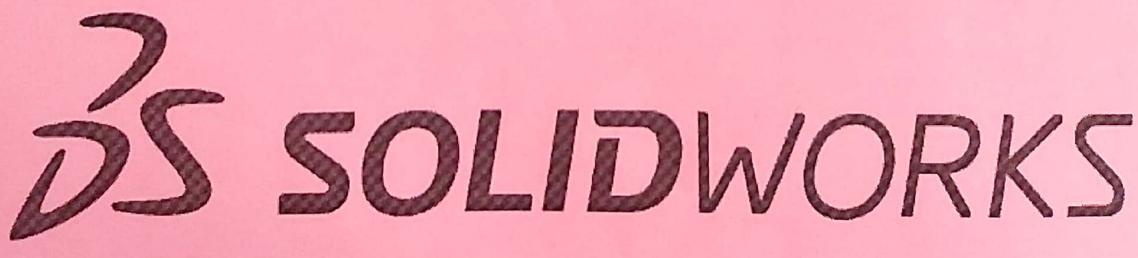
Date: 30.11.2017-04.12.2017

Venue:

Harita Tech serve lab,
Core Engineering Block
Paavai Engineering college

Course Incharge

- Mr. R.Ramachandra Prabhu AP/Aero,PEC



Scanned with CamScanner

17AEVC601 **COMPUTER AIDED DESIGN SOLIDWORKS**

COURSE OBJECTIVES

To enable the students to

- Use basic and advanced features of current CAD software.
- Understand how CAD technology can be leveraged in the design process.

INTRODUCTION TO CAD, CAE, PDM

Features of solid works, various tools available in Solid works for product design – Solid Works GUI – feature manager, design tree, Callouts, Handles, Confirmation corner, mouse buttons. Keyboard shortcuts, Command manager–File management.

SKETCHING

Sketching environment – Sketch entities – Inference line, Centerline line, Line, Circle, Arc, Ellipse, Rectangle, Slots, Polygon, Ellipse, Partial Ellipse, Spline, Spline tools, Points, Text, Construction geometry, Snap, grid – Sketch Relations– Blocks – Make block, Edit block, Insert block, Add/Remove Entities, Rebuild, Save, Explode.

INTRODUCTION TO PART MODELING

Reference geometry – Co–ordinates, Plane, Axis and Points – Modeling features – Extrude, Revolve, Swept and Loft– Relations –Adding Sketch Relation, Automatic relations – Creating extrude features — Creating revolve features–Creating helix and spiral – Creating loft features

PART MODELING – FEATURES

Fillets, Chamfers, Shell, Rib, Draft, Hole – Creating pattern – Linear pattern, Circular pattern, Sketch driven pattern, Curve driven pattern, Table driven pattern, Fill pattern, Mirror – Other tools – Inserting library feature, Measuring geometries, Materials, Mass properties, Selection manager, Multiple body concepts

ASSEMBLY MODELING

Introduction to assembly modeling & approaches – Top down and bottom up approach – Applying standard mates–Coincident, Parallel, Perpendicular, Tangent, Concentric, Lock, Distance, Angle – Top down design – Layout sketch, Work part in the context of an assembly

TOTAL PERIODS 30

COURSEOUTCOMES

Upon completion of this course the student will

- demonstrate competency with multiple drawing and modification commands in SolidWorks.
- create three-dimensional solid models.

TEXT BOOK & MANUALS

Scanned with CamScanner

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

17AIVC301 VALUE ADDITION OF FRUITS AND VEGETABLES

Course Content:

- Importance of post harvest technology of horticulture crops, maturity indices, ripening of fruits and vegetables
- Pre harvest factors affecting quality of fruits and vegetables, method of storage, pre storage treatments
- Various method of packaging, packaging technology for exports

Date: 17.07.2017 to 21.07.2017
Venue: T318

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. P.Athira, AP/AGRI

17AIVC301 VALUE ADDITION OF FRUITS AND VEGETABLES

course objectives

To enable the students to

- To gain knowledge on various management technologies on pre- harvest and post harvest of fruits and vegetables.
- Gain knowledge on conventional and modern packaging methods

Unit I

The Importance of post harvest technology of horticultural crops - Maturity indices, harvesting and post harvest handling of fruits and vegetables -Maturity and ripening process – factors affecting ripening of fruits and vegetables- chemicals used for hastening and delaying ripening of fruits and vegetables.

UNIT II

Pre harvest factors affecting quality on post harvest life of fruits and vegetables – factors responsible for deterioration of harvested fruits and vegetables. Methods of storage-precooling, pre storage treatments, low temperature storage, controlled atmosphere storage, hypobaric storage, irradiation and low cost storage structures.

UNIT III

Various methods of packaging-packaging materials and transport – packaging technology for export. Fabrication of type of containers, cushioning material, vacuum packaging, poly shrink packaging, specific packaging for export of mango, banana, grapes, etc.,

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Acquire knowledge on post harvest management tools and novel packaging technique

- Analyze the value addition in fruits crop
- Identify the best quality fruits used for value addition

TEXT BOOKS

1. .K.L.Chadha. 1993.Advances in Horticulture. Malhotra publishing house. New Delhi

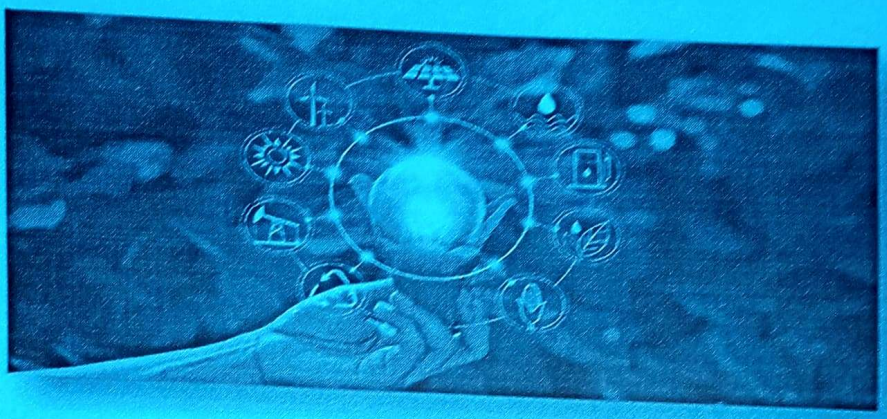
DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

17AIVC401 RENEWABLE ENERGY



Course Content:

- Classification of energy sources, renewable energy-potentials and achievements, characterization of biomass
- Biomass combustion technology, gasifier technology, principles of pyrolysis and methods
- Wind energy conversion principles, wind mill aero generator

Date: 27.11.2017 to 01.12.2017
Venue: T319

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. K.B.Ramkkumar, AP/AGRI

17AIVC401 RENEWABLE ENERGY

COURSE OBJECTIVES

To enable the students to

- To introduce to renewable energy sources
- To impart knowledge on biomass
- To introduce the manipulator thermochemical conversion technology

Module –I Overview of renewable energy sources

Classification of energy sources

Introduction to renewable energy

Renewable Energy-Potentials and Achievements

Module –II Characterization of Biomass

Characterization of biomass

Densification of biomass-Briqquetting

Module –III Thermochemical conversion Technology (TCCT)

Biomass Combustion Technology

Gasifier Technology

Biomass Gasification Methods

Removal of tar and impurities from gasification

Principles of pyrolysis and methods

Module –IV Wind Energy Conversion System (WECS)

Wind energy conversion principles

wind mill- aero generator

Module-V. Energy conservation in agriculture

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Ability to understand basic concept of renewable energy
- To analyze Instrumentation systems and their applications to various
- To know about the different energy conservation in agriculture

TEXT BOOKS

1. Rai., G.D. "Solar Energy Utilization" Khanna publishers, New Delhi, 2002
2. More, H.S and R.C. Maheshwari, " Wind Energy Utilization in India" CIAE Publication - Bhopal, 1982

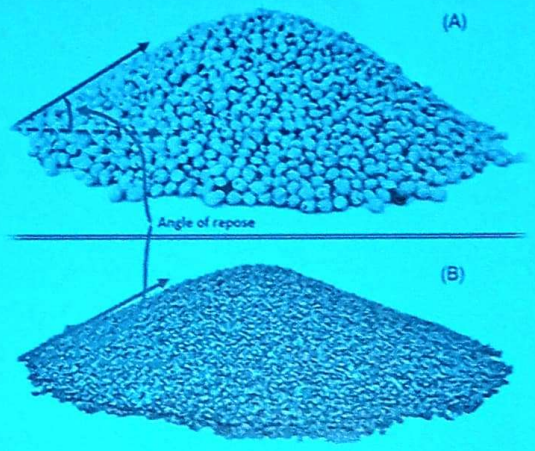
PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AGRICULTURE ENGINEERING

Value Added Course

17AIVC501 -ENGINEERING PROPERTIES OF AGRICULTURAL PRODUCTS



Course Content:

- Classification and importance of engineering properties of agricultural produce, coefficient of thermal expansion.
- Rheological properties, Newtonian and non-Newtonian liquid, psuedoplastic
- Electrical properties, application of engineering properties

Date: 27.06.2017 to 01.07.2017
Venue:T318

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. Dr.C.Mayilswami, AP/AGRI

17AIVC501 ENGINEERING PROPERTIES OF AGRICULTURAL PRODUCE

COURSE OBJECTIVES

To enable the students to

- To make students understand the basic theoretical aspects and importance of engineering properties of agricultural produce
- To learn the physical and thermophysical properties of agricultural materials
- To learn the requirement of engineering properties of materials for analysis and design of agricultural food and biological systems.

UNIT I

Classification and importance of engineering properties of Agricultural Produce, shape, size, roundness, sphericity, volume, density, porosity, specific gravity, surface area of grains, fruits and vegetables, Thermal properties, Heat capacity, Specific heat, Thermal conductivity, Thermal diffusivity, Heat of respiration; Co-efficient of thermal expansion, Friction in agricultural materials; Static friction, Kinetic friction, rolling resistance; angle of internal friction, angle of repose, Flow of bulk granular materials, Aero dynamics of agricultural products, drag coefficients, terminal velocity.

UNIT II

Rheological properties; force, deformation, stress, strain, elastic, plastic and viscous behaviour, Newtonian and Non-Newtonian liquid, Visco-elasticity, Newtonian and NonNewtonian fluid, Pseudo-plastic, Dilatant, Thixotropic, Rheopectic and Bingham Plastic Foods, Flow curves.

UNIT III

Electrical properties; dielectric loss factor, loss tangent, A.C. conductivity and dielectric constant, method of determination. Application of engineering properties in handling processing machines and storage structures

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify engineering properties of Agricultural materials.

- Explain related measurement methods.
- Relate engineering properties of food and agricultural materials to process design and quality control.

TEXT BOOKS

1. Engineering Properties of Agricultural ProduceEdited By Suresh Chandra,Samsher ,Suneel Kumar GoyalDurveshKumari ISBN 9780367635008Published November 27, 2020 by CRC Press

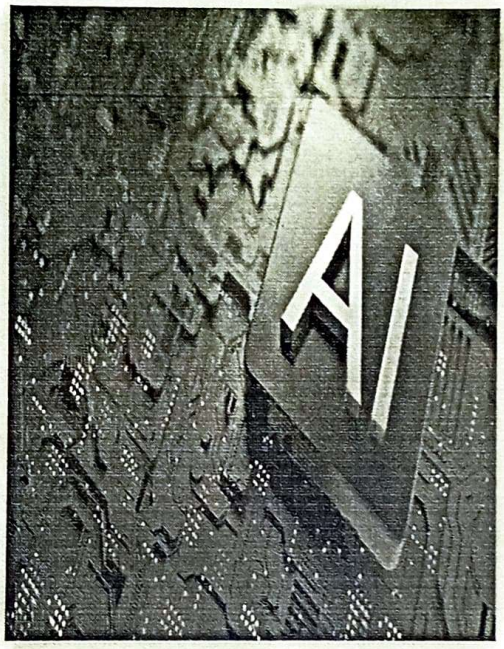
Value Added Course

17AIVC601 ARTIFICIAL INTELLIGENCE



Course content:

- Foundation and history of artificial intelligence, logic programming, representing knowledge using rules
- Reasoning and uncertainity, review of probability, non monotonic reasoning
- Planning in situational calculus, learning by analogy, AI application to robotics

Date: 27.11.2017 to 01.11.2017
Venue:T319

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. S.Nithya, AP/AGRI

17AIVC601 ARTIFICIAL INTELLIGENCE

COURSE OBJECTIVES

To enable the students to

- To have an appreciation for and understanding of both the achievements of AI
- Explain the basic knowledge representation ,problem solving and learning method of AI

Unit I

Foundation and history of artificial intelligent, problems and techniques – AI programming languages, introduction to LISP and PROLOG- problem spaces and searches, blind search strategies, Breadth first- Depth first- heuristic search techniques Hill climbing: best first-A algorithm AO algorithm- game tree, Min max algorithms, game playing- alpha beta pruning. Knowledge representation issues, predicate logic- logic programming, semantic nets- frames and inheritance, constraint propagation, representing knowledge using rules, rules based deduction systems.

UNIT II

Reasoning under uncertainty, review of probability, Baye's probabilistic interferences and Dempstershafer theory, Heuristic methods, symbolic reasoning under uncertainty, Statistical reasoning, Fuzzy reasoning, Temporal reasoning, Non monotonic reasoning.

UNIT III

Planning and planning in situational calculus, representation for planning, partial order planning algorithm, learning from examples, discovery as learning, learning by analogy, explanation based learning, neural nets, genetic algorithms. Principles of Natural language processing, rule based systems architecture, Expert systems, knowledge acquisition concepts, AI application to robotics, and current trends in intelligent systems.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the role of knowledge representation problem solving and learning in intelligent system engineering
- Assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving particular particular engineering problems
- Develop on interest in the sufficient to take more advanced subject

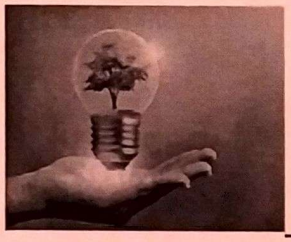
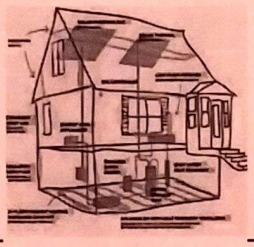
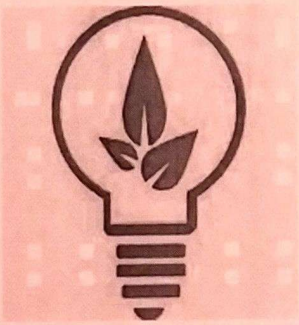
DEPARTMENT OF CIVIL ENGINEERING

COURSE NAME :

- **RENEWABLE ENERGY & GREEN BUILDING ENTREPREUNRSHIP**







- This online course explores how to evaluate business opportunities, challenges, and potential solutions in the renewable energy and green building sectors.
- This course also discuss the topics of launching a new business or corporate initiative, by applying the 1-page business idea summary template and the Business Model Canvas to generating and refining your own new business ideas, successful business in renewable energy or green building and Plan for engaging with investors who might finance a new business.

Date of conduction: 17.7.2017 to 21.7.2017

Course Incharge: Mrs.J.Umanambi HOD/Civil & Ms.S.Gayathri AP/Civil

17CEVC301 RENEWABLE ENERGY AND GREEN BUILDING ENTREPRENEURSHIP

COURSE OBJECTIVES

To enable the students to

- gain knowledge on renewable energy sources & real time examples
- understand the concepts of making a start up with financial sustainability
- acquire knowledge on green building concepts

Module I

Inside Entrepreneurship: Entrepreneurs Solve Problems -Opportunities in Green Building Design - Financial Opportunities in Renewable Energy -Green Building Case Study: Cherokee Investment Partners

Module II

Renewable Energy Case Study: Strata Solar - The Importance of Entrepreneurial Thinking for the Green Building Industry - Green Building Global Status Report and World Green Building Trends 2016

Module III

Logic behind green building & renewable energy -Generating Ideas for a Startup - Building a Great Team - Financing and launching Your Business

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply procedure of renewable energy & green building to real time projects
- establish a start up business
- apply concepts of green building & renewable energy sources

TEXT BOOKS

1. Green Building: Principles and Practices in Residential Construction by Carl Seville ,Delmar Cengage Learning publications,2012

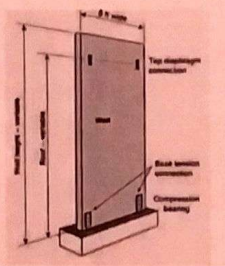
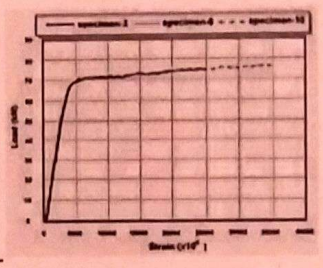
DEPARTMENT OF CIVIL ENGINEERING

COURSE NAME :

❖ DEVELOPMENT AND APPLICATION OF SPECIAL CONCRETE





- ❖ This course emphasis on the better understanding of the hydration of cement, and other issues relating to properties of concrete, has made it possible to use several other ingredients and have led to the development of several special concretes and construction methods and use concrete in diverse environments.
- ❖ This course also covers the topic such as Concreting in cold and hot weather, Self-compacting and fiber reinforced concretes, Basic understanding of high strength concrete, mass concrete and shotcrete, Handling preplaced aggregate concrete and light weight aggregate concrete, Underwater anti-washout concrete; micro-concrete, expansive concrete, roller compacted concrete, concrete using recycled aggregate.

Date of conduction: 27.11.2017 to 1.12.2017

Course Incharge: Dr.S.Sukumar Dean/Civil & Mr.T.S.Kumanan AP/Civil

17CEVC401 DEVELOPMENT AND APPLICATIONS OF SPECIAL CONCRETES

COURSE OBJECTIVES

To enable the students to

- gain knowledge on special concrete applications
- understand the concepts of mix design, properties of special concrete
- acquire knowledge on Self compacting concrete properties

Module I

Basic properties of fresh concrete & hardened concrete- Fundamentals of proportioning concrete mixes - Proportioning of normal concrete mixes - Concrete mix proportions: Analysis and adjustments - Pores and porosity in concrete -admixtures in concrete

Module II

Importance of Right Methods and Specifications - Heat of Hydration of Cement and Thermal Stresses – Anti_washout Underwater Concrete - Concreting Underwater- Roller Compacted Concrete

Module III

Self compacting concrete – Fibre reinforced concrete – grouting, mix design – shot crete- high strength concrete & its Applications

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply special concrete for various applications
- calculate the mix proportions for special concrete
- prepare mix design for self compacting concrete

TEXT BOOKS

1. Special Concretes, Mortars and Concrete Products by Portland cement association, 1975

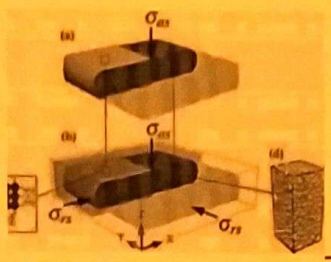
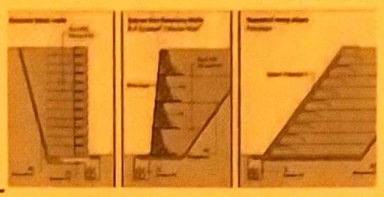
DEPARTMENT OF CIVIL ENGINEERING

COURSE NAME :

- **GEOSYNTHETICS & REINFORCED SOIL STRUCTURES**





- This course will dealt with the geosynthetics as construction materials in civil engineering projects. It will introduce the concept of geosynthetics, their manufacture and their behavior and their applications in different civil engineering designs.
- This course also deals with the Introduction to Geosynthetics, Manufacture of geosynthetics, External Stability Analysis of Reinforced Soil Retaining Walls, Stability analysis of soil slopes – infinite and finite slopes, Reinforced soil for supporting shallow foundations, Drainage application of geosynthetics, Erosion control using geosynthetics, Geosynthetics for construction of municipal and hazardous waste landfills

Date of conduction: 27.6.2017 to 1.7.2017

Course Incharge: Mr.S.Balamurugan AP/Civil & Mr.A.Arun AP/Civil

17CEVC501 GEOSYNTHETICS AND REINFORCED SOIL STRUCTURES

COURSE OBJECTIVES

To enable the students to

- gain knowledge on geosynthetics and reinforced soil structures applications

Module I

Introduction to Geosynthetics-Strength of reinforced soils-Different Types of Soil Retaining Structures -External Stability Analysis of Reinforced Soil Retaining Walls -Design of Reinforced soil Retaining walls - simple geometry -stability analysis of soil slopes- Infinite slopes -Reinforced soil for supporting shallow foundations -Accelerated consolidation of soft clays using geosynthetics **Drainage application of geosynthetics** -Erosion control using geosynthetics -Geosynthetics for construction of municipal and hazardous waste landfills

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply field procedure geosynthetics

TEXT BOOKS

1. Geosynthetics in Civil Engineering by R W Sarsby , Woodhead Publishing,2006

REFERENCES

2. Designing with Geosynthetics by Robert M. Koerner , Pearson publishing , 2017

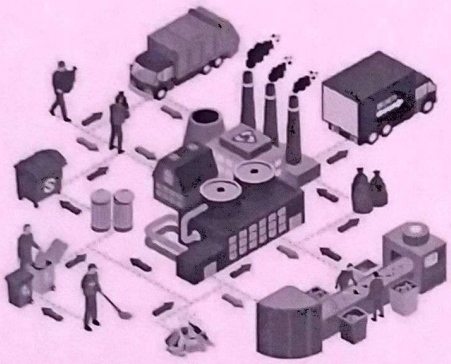
DEPARTMENT OF CIVIL ENGINEERING

COURSE NAME :

- INTEGRATED WASTE MANAGEMENT FOR A SMART CITY.



- This course has emphasizes on Integrated Solid Waste Management aspects within the broad subject area of Integrated Waste Management for a Smart City.
- Sustainable management of solid wastes covering all sources and all aspects, covering generation, segregation, transfer, sorting, treatment, recovery and disposal in an integrated manner, with an emphasis on maximizing resource use efficiency will be covered in this course.

Date of conduction: 26.11.2017 to 30.11.2017

Course Incharge:

- Mr. A.Jayapal, AP/Civil

17CEVC601 INTEGRATED WASTE MANAGEMENT FOR A SMART CITY

COURSE OBJECTIVES

To enable the students to

- gain knowledge on integrated waste management
- understand the concepts of implementing waste management for a city
- gain knowledge on reuse of waste electronic materials

Module I

Introduction to Solid Waste Management Municipal Solid Waste Characteristics and Quantities MSW Rules 2016, Swachh Bharat Mission and Smart Cities Program Municipal Solid Waste Collection, Transportation, Segregation and Processing Disposal of Municipal Solid Waste Biochemical Processes and Composting Energy Recovery from Municipal Solid Waste

Module II

Current Issues in Solid Waste Management and Review of MSW Management Status in First List of 20 Smart Cities in the Country Construction and Demolition (C&D) Waste Management - Overview C&D Waste – Regulation

Module III

Beneficial Reuse of C&D Waste Materials Electronic Waste (E-Waste) Management – Issues and Status in India and Globally E-Waste Management Rules 2016 and Management Challenges

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply gained knowledge on integrated waste management
- implement the concepts of waste management for a city
- implement reuse ideas of waste electronic materials in consttruction

TEXT BOOKS

1. Sustainable Environment: A Text Book for Environmentalist, Researchers, Academia, Ecologists, Waste-Preneurs, Entrepreneurs by Shailesh Jha and Preeti Jha , 2015

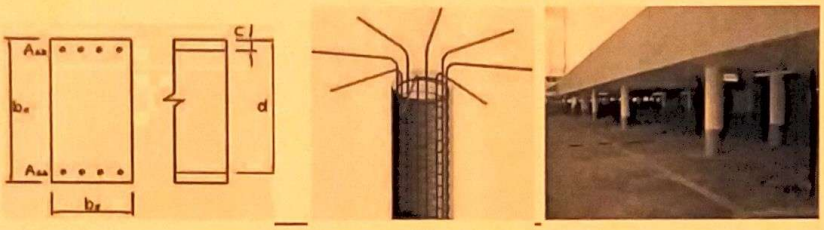
NAMAKKAL -637 018

DEPARTMENT OF CIVIL ENGINEERING

COURSE NAME :

- **LIMIT STATE DESIGN OF REINFORCED CONCRETE COLUMNS**



- In this course, basic elements governed by bending, shear, axial forces or combination of them are identified and are considered as building blocks of the whole structure. Different methods of design will be briefly described before introducing the limit states of collapse and serviceability.
- This course also covers the topics such as Introduction, Different methods of design of reinforced concrete structures, Limit state of collapse – shear, Limit state of serviceability

Date of conduction: 27.6.2017 to 1.7.2017

Course Incharge: Mr.S.Suryaprakash AP/Civil & Mr.R.Nagarajan AP/Civil

17CEVC701 LIMIT STATE DESIGN OF REINFORCED CONCRETE COLUMN

COURSE OBJECTIVES

To enable the students to

- gain knowledge on design of reinforced columns and understand the concepts of Limit state design

Module I

Concept of reinforced concrete- Working Stress Method (WSM) of design for reinforced concrete, permissible stresses as per IS-456-2000; stress- strain curve of concrete and steel, characteristics of concrete steel reinforcement.

Concept of balanced, under reinforced and over reinforced sections. Analysis design of singly reinforced and doubly reinforced rectangular beams for flexure, shear by WSM, Analysis and design of Cracked and un-cracked RCC column sections by WSM

Introduction to limit state method of design as per IS-456-2000; concepts of probability and reliability, characteristic loads, characteristic strength, partial safety factors for loads and materials, introduction to various limit states

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply gained knowledge on design of reinforced columns and implement the concepts of Limit state design

TEXT BOOKS

Value Added Course

17CSVC301 - ETHICAL HACKING

Ethical hacking involves an authorized attempt to gain unauthorized access to a computer system, application, or data. Carrying out an ethical hack involves duplicating strategies and actions of malicious attackers. ... Also known as "white hats," ethical hackers are security experts that perform these assessments.

Ethical hacking is to evaluate the security of and identify vulnerabilities in target systems, networks or system infrastructure. The process entails finding and then attempting to exploit vulnerabilities to determine whether unauthorized access or other malicious activities are possible.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to apply a enough language in programming languages such as C, C++ java or python

Date: 17.07.2017-21.07.2017

Venue: Class Room No: 319

COURSE CO-ORDINATOR

M. Sivaganesh AP/CSE
R. Aruleeswari, AP/CSE

17CSVC301 ETHICAL HACKING

COURSE OBJECTIVES

To enable the students to

- To Explore ethical hacking basics
- To Explore wireless network hacking
- To Investigate reconnaissance: Information gathering for the ethical hacker

Module 1: Introduction

- Course Introduction
- Introduction to the CEH Certification

Module 2: Introduction to Ethical Hacking

- Fundamental Security Concepts
- Information Security Threats and Attacks
- Introduction to Ethical Hacking
- Introduction to the Cyber Kill Chain
- Introduction to Security Controls
- Introduction to Security Laws and Standards

Module 3: Footprinting and Reconnaissance

- Introduction to Footprinting
- Website Footprinting
- DNS Footprinting
- HTTrack (Demo)
- Shodan (Demo)
- Google Hacking Database (Demo)
- LinkedIn (De no)
- Job Boards (Demo)
- whois (Demo)

- Banner Grabbing (Demo)
- theHarvester (Demo)
- Footprinting Countermeasures

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze ethical hacking basics
- Implement wireless network hacking
- Implement Information gathering for the ethical hacker

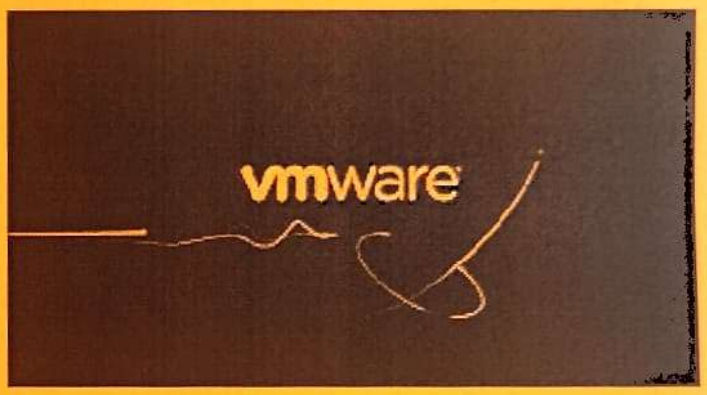
17CSVC401 - VMWARE

VMware allows businesses to run multiple application and operating system workloads on the one server – thus enabling better resource management. By creating a virtual machine that behaves exactly like an actual computer – VMware also allows everything running on that virtual machine to run in its own window.

vmware



VMware streamlines the journey for organizations to become digital businesses that deliver better experiences to their customers and empower employees to do their best work. Our software spans App Modernization, Cloud, Networking & Security and Digital Workspace

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to learn about the virtualization and how to run multiple application and operating system in one server

Date: 27.11.2017-01.12.2017

Venue: Class Room No: Ground Floor Computer Lab

COURSE CO-ORDINATOR

J. Velumani, AP/CSE
S. Rajesh, AP/CSE

17CSVC401 VMWARE

COURSE OBJECTIVES

To enable the students to

- To Explore the many significant benefits of virtualization
- To Understand about VMware Virtualization
- To Understand, create and manage high availability clusters to protect against VM service loss caused by ESXi server failures

Module 1 Introduction to Virtualization Technologies

• VMware workstation

• VMware player

• Virtual box

Module 2. Introduction to VMware Virtualization

• Introduce Virtualization

• Introduce Virtual machines

• Introduce vSphere components

Module 3. VMware ESX and ESXi (ESX/ESXi 4.1)

• Introduce the architecture of ESX and ESXi

• Manually configure ESX/ESXi

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze the many significant benefits of virtualization
- Implement about VMware Virtualization
- Demonstrate create and manage high availability clusters to protect against VM service loss caused by ESXi server failures.

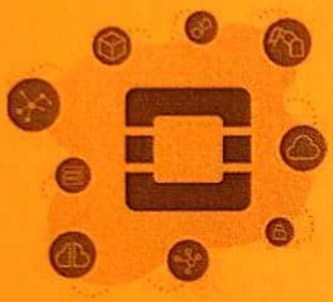
17CSVC501 - Open STACK

OpenStack is a set of software tools for building and managing cloud computing platforms for public and private clouds. ... OpenStack is managed by the OpenStack Foundation, a non-profit tha oversees both development and community-building around the project.



It is an open source platform that uses pooled virtual resources to build and manage private and public clouds. The tools that comprise the OpenStack platform, called "projects," handle the core cloud-computing services of compute, networking, storage, identity, and image services.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to understand the concepts of core cloud computing and variety of tools used in it.

Date: 27.06.2017-01.07.2017

Venue: Class Room No: 317

COURSE CO-ORDINATOR

P. Santhiya, AP/CSE
T. Ambiga

17CSVC501 OPEN STACK

COURSE OBJECTIVES

To enable the students to

- To Explore OpenStack architecture with both CLI and API functionalities
- To Implement and use Nova, Neutron, Image and other OpenStack services
- To Work on an interactive project around implementing OpenStack

Module 1: Introduction

- Introduction to Linux
- Linux admin commands
- Introduction to Cloud
- Comparison with Amazon AWS and RackSpace cloud
- Other Cloud frameworks
- Introduction to OpenStack and its components
- Virtualization techniques

Module 2: Compute (Nova)

- What is nova
- Supported hypervisors
- Xen, LXC, KVM, Qemu, VMWare
- Architecture & features
- Control Flow
- Building a Platform as a Service using Docker/LXC?

Module 3: OpenStack image service (Glance)

- What is Glance
- Supported image formats
- Creating, uploading and using an image
- Architecture & features
- Control flow

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze OpenStack architecture with both CLI and API functionalities
- Implement and use Nova, Neutron, Image and other OpenStack services
- Analyze interactive project around implementing OpenStack

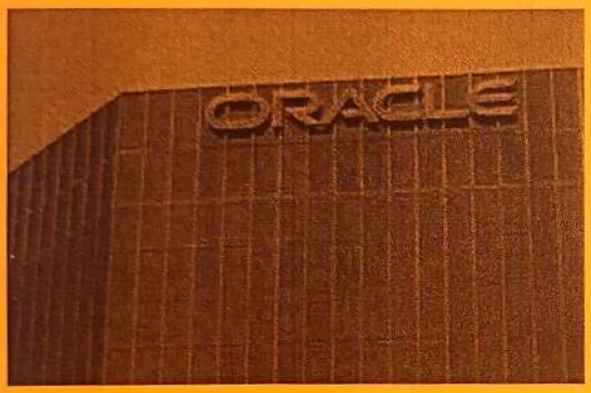
17CSVC601 - ORACLE

Oracle is a fully scalable relational database architecture and is often used by global enterprises which manage and process data across wide and local area networks. The Oracle database has its own network component to allow communications across networks.



It makes software, called database management systems (DBMS), to create and manage databases. An Oracle Database (aka Oracle RDBMS) is a collection of data organized by type with relationships being maintained between the different types.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to work with the data using the Relational database in the platform called Oracle

Date: 27.11.2017-01.12.2017

Venue: Class Room No: 318

COURSE CO-ORDINATOR

M. Sivaranjani, AP/CSE
V. Maheskumar, AP/CSE

17CSVC601 ORACLE

COURSE OBJECTIVES

To enable the students to

- To Understand about basics of SQL.
- To Learn about retrieving data from stored data.
- To Focuses on the creating table with DDL commands.

Module 1: Introduction To SQL

1. Introduction Database
2. Understanding DBMS vs RDBMS
3. Gone through SQL Standards
4. Sub languages of SQL
5. Difference between 10g vs 11g vs 12c
6. Installation of 12c
7. About SQL*Plus and use of developer tool
8. Datatypes in Oracle
9. Operators in Oracle
10. Understanding Schema design and objects

Module 2: Data Retrieval Techniques

1. How to use select statement in different ways to retrieve records?
2. Working with Column alias
3. Working with Table alias
4. Data filtering and sorting with in single table
5. Clauses and its types in oracle

    - Where clause
    - Having clause
    - From clause

- Group by clause
- Order by clause
- Using clause
- Constraint clause
- For update clause

Module 3: Working With DDL Commands

1. Table creation using CREATE statement
2. Creating table from another table
3. Dropping a table using DROP command
4. Altering the column of a table
5. Modifying the column datatype in a table
6. Renaming the column of a table
7. Renaming an entire table
8. Using truncate command
9. Difference between Delete and Truncate command

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze basics of SQL.
- Demonstrate retrieving data from stored data
- Implement creating table with DDL commands.

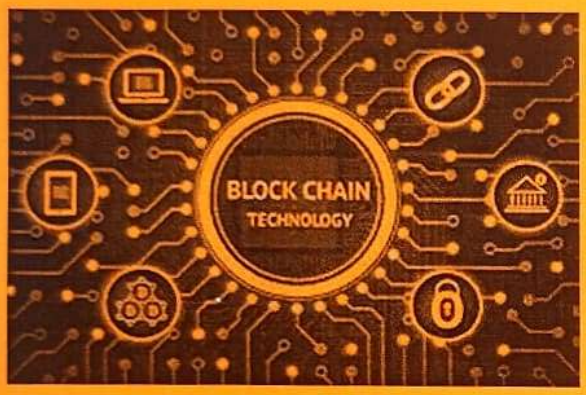
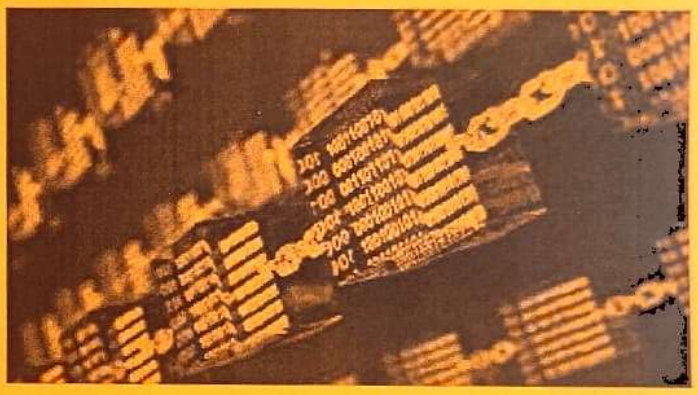
17CSVC701 - BLOCKCHAIN

Blockchain technology is most simply defined as a decentralized, distributed ledger that records the provenance of a digital asset. ... Blockchain is most simply defined as a decentralized, distributed ledger technology that records the provenance of a digital asset.





It is a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. Each block in the chain contains a number of transactions, and every time a new transaction occurs on the blockchain, a record of that transaction is added to every participant's ledger.

INTENDED AUDIENCE

- IV Year of BE, B.Tech - Students
- Students able to understand the blockchain technology and how to made a variety of transactions and record the information.

Date: 27.06.2017 - 01.07.2017

Venue: Class Room No: 315

COURSE CO-ORDINATOR

Dr.D.Banumathy, Prof/CSE
J.Nashreen Begam, AP/CSE

17CSVC701 **BLOCKCHAIN**

COURSE OBJECTIVES

To enable the students to

- To be able to explain the different components involved within Blockchain
- To understand what Blockchain is and why it is used
- To understand about basic Crypto primitives

Module 1: Introduction

- Need for Distributed Record Keeping
- Modeling faults and adversaries
- Byzantine Generals problem
- Consensus algorithms and their scalability problems
- Why Nakamoto Came up with Blockchain based cryptocurrency? Technologies Borrowed in Blockchain – hash pointers, consensus, byzantine fault-tolerant distributed computing, digital cash

Module 2: Basic Distributed Computing

Atomic Broadcast, Consensus, Byzantine Models of fault tolerance

Module 3: Basic Crypto primitives

Hash functions, Puzzle friendly Hash, Collison resistant hash, digital signatures, public key crypto, verifiable random functions, Zero-knowledge systems

TOTAL PERIODS 30

COURSEOUTCOMES

At the end this course, students will be able to

- Analyze different components involved within Blockchain
- Analyze what Blockchain is and why it is used

- Implement basic Crypto primitives

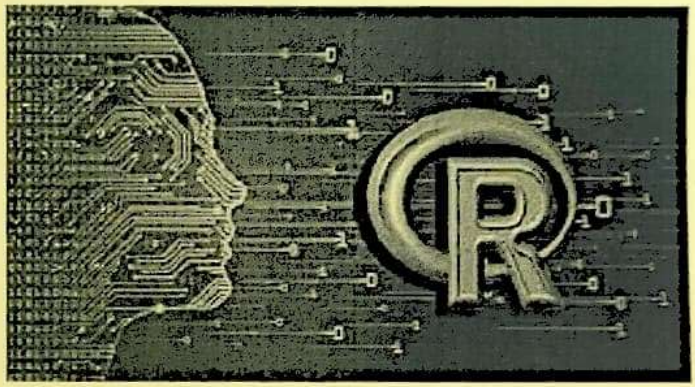
17CSVC801 - R PROGRAMMING

R is a programming language for statistical computing and graphics that you can use to clean, analyze, and graph your data. It is widely used by researchers from diverse disciplines to estimate and display results and by teachers of statistics and research methods.



Today, millions of analysts, researchers, and brands such as Facebook, Google, Bing, Accenture, Wipro are using R to solve complex issues. The applications of R are not limited to just one sector, we can see the use of R in banking, e-commerce, finance, and many more sectors.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to apply a variety of techniques to solve analytical problems in the platform called R.

Date: 27.11.2017 - 01.12.2017

Venue: Class Room No: 318

COURSE CO-ORDINATOR

J. Karthik, AP/CSE
R. Santhiya , AP/CSE

17CSVC801 R PROGRAMMING

COURSE OBJECTIVES

To enable the students to

- To understand about basic concept data Analytics
- Integrate R in a Hadoop platform
- write R codes to manipulate data

Module1 Introduction

- What are Data Analysis, Data Analytics and Data Science?
- Business Decisions
- Case study of Walmart

Module2 Various analytics tools

- Descriptive
- Predictive
- Web Analytics
- Google Analytics
- R and features
- Evolution of R?
- Big data Hadoop and R

Module3 Data Types

- R & R Studio Installation
- Scalar
- Vectors
- Matrix
- List
- Data frames
- Factors
- Handling date in R

- Conversion of data types
- Operators in R

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze basic concept data Analytics
- Demonstrate R in a Hadoop platform
- Implement R codes to manipulate data

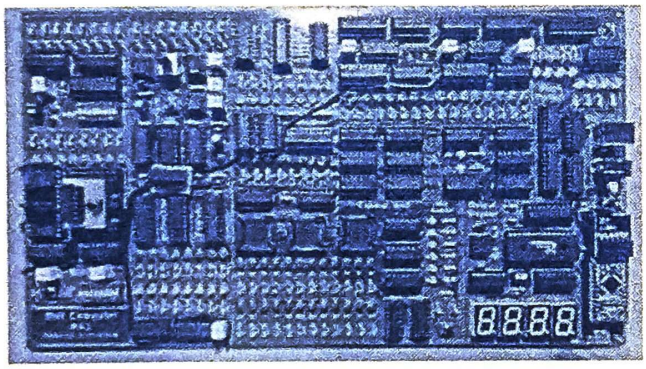
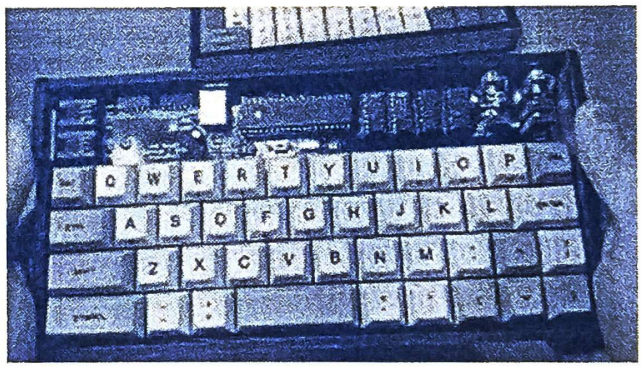
BASICS OF 8 BIT PROCESSORS





Date: 17.07.2017 – 21.07.2017

Course Co-ordinator: Ms. D. Tharani, AP / ECE

Venue: M208

17ECVC301 **BASICS OF 8 BIT PROCESSORS**

COURSE OBJECTIVE

To enable the students to

- study the architecture of microprocessor
- learn the operations of microprocessor

Unit I Architecture **15**

Introduction and evolution microprocessor-Architecture of microprocessor, Bus organization, Register organization, semiconductor memory fundamentals

Unit II Operations with microprocessor **15**

Instruction set, Addressing mode, programming with 8 bit processor, Real time programming

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- understood the functionality of microprocessor
- ability to perform simple programming with 8 bit processor

.

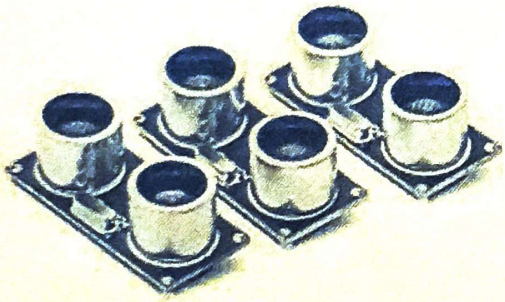
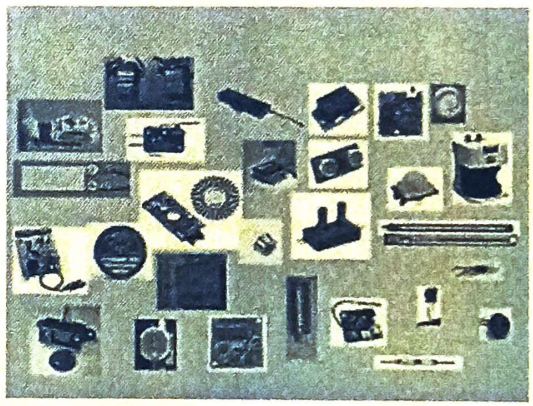
SENSORS AND TRANSDUCERS





Date: 27.11.2017-01.12.2017

Course Co-ordinator: Ms. K. Thendral, AP / ECE

Venue: M208

17ECVC401 **SENSORS AND TRANSDUCERS**

COURSE OBJECTIVE

To enable the students to

- expertise in various calibration techniques and signal types for sensors.
- understand the working principle of different Transducers.

UNIT I INTRODUCTION AND VARIOUS KINDS OF SENSORS **15**

Basics of Sensors-Motion Sensors – Potentiometers, Resolver, Encoders – Optical, Magnetic, Inductive, Capacitive, Synchro – Microsyn, Accelerometer, Range Sensors– RF beacons, Ultrasonic, Ranging, Reflective beacons, Laser Range Sensor (LIDAR). Photo conductive cell, photo voltaic, Photo resistive. LDR – Fiber optic sensors – Pressure – Diaphragm, Bellows, Piezoelectric Thermistor, RTD, Thermocouple. Acoustic Sensors – flow and level measurement sensors- Smart Sensors- Film sensor, MEMS & Nano Sensors.

UNIT II TRANSDUCERS **15**

Classification of Transducers, Advantages and Disadvantages of Electrical Transducers, Transducers, Resistance Transducers, Variable Inductance Transducers, Capacitive Transducers, Piezoelectric Transducers, Hall Effect Transducers, Thermoelectric Transducers, Photoelectric Transducers. Strain gauges, Resistance, thermometer, Thermistor, LVDT and RVDT

TOTAL PERIODS **30**

COURSE OUTCOMES

Upon completion of this course, the students would have

- study the basics of sensor technology and the various sensor technologies for the measurement of Force, Pressure, acceleration, vibration and Torque.
- acquire the Knowledge and Measure different electrical parameters using Transducers.

TEXT BOOK & MANUALS

1. D. Patranabis – "Sensors and Transducers" –PHI Learning Private Limited.
2. Jacob Fraden, "Hand Book of Modern Sensors: physics, Designs and Applications", 3rd ed., Springer, 2010.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- understand server-side scripting with PHP language
- understand server-side scripting with Host Objects

TEXT BOOK

1. Jeffrey C.Jackson, "Web Technologies--A Computer Science Perspective", Pearson Education, 2006

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Training Course

ADVANCED GPS TECHNOLOGY

Date: 27.11.2017 - 01.12.2017

Course Co-ordinator: Mr. V. Sakthivel, ASP / ECE

Venue: M213

17ECVC601 ADVANCED GPS TECHNOLOGY

COURSE OBJECTIVE

To enable the students to

- understand the pertinence of the navigation code
- be aware of some of the opportunities afforded by the coming GNSS systems

Unit-I GPS errors and accuracy: **15**

Satellite dependent: Ephemeris errors and orbit perturbations, Forces on GPS satellites, Effects of orbital bias, Types of satellite ephemerides, Satellite clock bias, Selective availability.

Receiver dependent: Receiver clock bias, Cycle slip, Selective availability (SA).

Unit II – GPS Measurement **15**

Observation medium dependent: Ionospheric errors, Tropospheric errors.

Station dependent: Multipath, Station coordinates. Satellite geometry-based measures:

Geometry dependent (Dilution of Precision: DOP), User Equivalent Range Error UERE.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- describe the orbital bias
- recognize some of the important issues in choosing a GPS receiver

TEXT BOOK

1. B. Hofmann-Wellenhof, H. Lichtenegger and J. Collins, 1994. Global Positioning System: Theory and Practice, Publisher: Springer, Berlin (Germany)

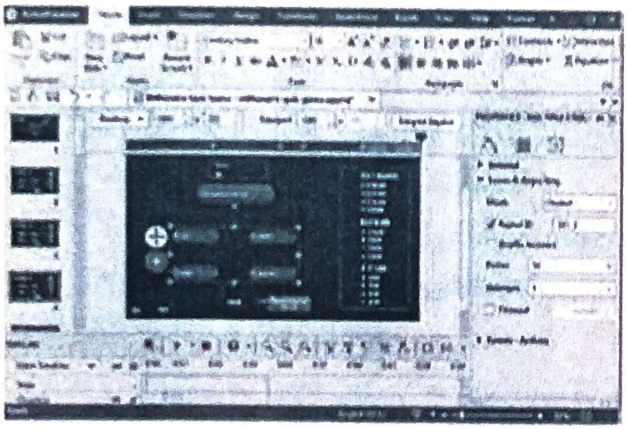
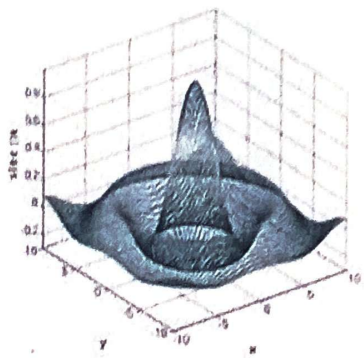
Training Course

BASICS OF SIMULATION TOOLS





Date: 27.06.2017 – 01.07.2017

Course Co-ordinator: Ms. P.Padmaloshani, ASP / ECE

Venue: M206

17ECVC701 **BASICS OF SIMULATION TOOLS**

COURSE OBJECTIVE

To enable the students to

- understand the saving of development time.
- understand testing and finding of critical states and regions of operation.

Unit I **Simulation tools** **15**

Principle of simulation in the past and today, Analog computers, Digital computers, Simulation tools, Mathematical input, Netlist input, Critical tasks and other critical points, A selection of simulation tools, PSpice, Matlab / Simulink / Sim Power Systems / PLECS, PSIM.

Unit II **Models for switched power stages** **15**

Switches, semiconductors, and passive elements, CASPOC, Saber, Switches, switching elements the following four states - Semiconductors, Snubbers, Passive elements, Fast models for switched power stages, Electrical circuit design, Controller design, Circuits and modelling, Electrical behavior of a reduced model.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- fast models/high simulation speed.
- open to other programs (data import and export).
- macros and sub-circuit capabilities.

TEXT BOOK & MANUALS

1. Cantot, P., and Luzeaux, D., Eds. (2013), Simulation and Modeling of Systems of Systems. John Wiley and Sons.
2. Cellier, F.E. and E. Kofman (2006), Continuous System Simulation, Springer-Verlag, New York, NY.

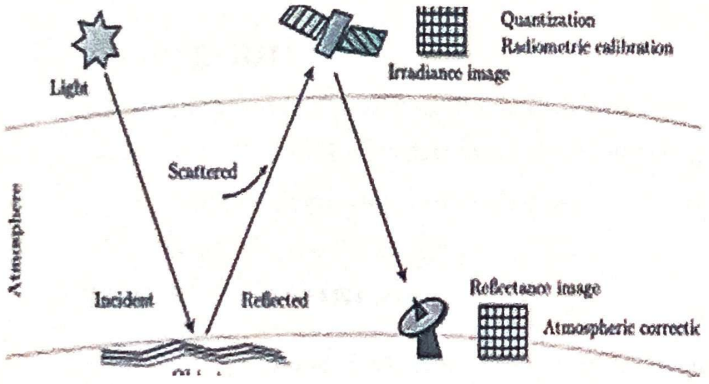
Training Course

PROCESSING OF REMOTE SENSING



Date: 27.11.2017 – 01.12.2017

Course Co-ordinator: Ms. B. Jothi, ASP / ECE

Venue: M206

17ECVC801 **PROCESSING OF REMOTE SENSING**

COURSE OBJECTIVE

To enable the students to

- provide an exposure to various data types and data formats available in remote sensing.
- provide an exposure to various image processing techniques

Unit I DATA RECEPTION AND DATA PRODUCTS **15**

Ground segment organization – Data product generation – Sources of errors in received data – Referencing scheme – Data product output medium – Digital products–Super structure, Fast,GeoTIFF, Hierarchical and HDF formats – Indian and International Satellite - Data Products – Ordering of data

Unit II DATA ANALYSIS **15**

Data products and their characteristics – Digital image processing – Preprocessing – Image rectification – Image enhancement techniques – Image classification – Supervised and unsupervised classification algorithms for multispectral and hyperspectral images – Accuracy assessment.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- identify the types of data available in remote sensing
- understand the image processing techniques employed

TEXT BOOK & MANUALS

1. Lilles and, T.M., Kiefer, R.W. and J.W.Chipman. "Remote Sensing and Image Interpretation" 5th Edition., John Willey and Sons Asia Pvt. Ltd., New Delhi, 2004.

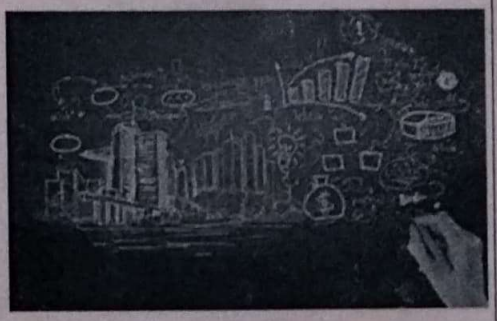
ENGINEERING ECONOMICS, ESTIMATION, AND COSTING

Course Duration: 17.07.2017- 21.07-2017

Venue: PEC-Temple Tower -T211

Course Coordinator: C.Arul Kumar ASP/EEE



17EEVC301 ENGINEERING ECONOMICS, ESTIMATION AND COSTING

COURSE OBJECTIVES

To enable the students to

- know the basic of the costing of engineering.
- understand the estimation of the engineering.
- know the methods of costing for the various applications.

UNIT I MODULE 1 **10**

Basic Principles and Methodology of Economics. Demand/Supply – elasticity – Government Policies and Application. Theory of the Firm and Market Structure. Basic Macro-economic Concepts (including GDP/GNP/NI/Disposable Income) and Identities for both closed and open economies. Aggregate demand and Supply (IS/LM). Price Indices (WPI/CPI), Interest rates, Direct and Indirect Taxes

UNIT II MODULE 2 **10**

Public Sector Economics –Welfare, Externalities, Labor Market. Components of Monetary and Financial System, Central Bank –Monetary Aggregates; Commercial Banks & their functions; Capital and Debt Markets. Monetary and Fiscal Policy Tools & their impact on the economy – Inflation and Phillips Curve.

UNIT III MODULE 3 **10**

Elements of Business/Managerial Economics and forms of organizations. Cost & Cost Control – Techniques, Types of Costs, Lifecycle costs, Budgets, Break even Analysis, Capital Budgeting, Application of Linear Programming. Investment Analysis – NPV, ROI, IRR, Payback Period, Depreciation, Time value of money (present and future worth of cash flows). Business Forecasting – Elementary techniques. Statements – Cash flow, Financial. Case Study Method.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Have an idea of Economics in general, Economics of India particularly for public sector agencies and private sector businesses
- Be able to perform and evaluate present worth, future worth and annual worth analyses on one of more economic alternatives.
- Be able to carry out and evaluate benefit/cost, life cycle and breakeven analyses on one or more economic alternatives.

Venue: PEC-Temple Tower -T211

Course Coordinator: D.Murugesan AP/EEE

17EEVC401 AUTOCAD ELECTRICAL

COURSE OBJECTIVES

To enable the students to

- How to use the powerful electrical drawing creation tools in the AutoCAD Electrical software.
- Describe the You will create schematic drawings such as ladder logic and point to point, panel drawings, and PLC-I/O circuits using automated commands for symbol insertion, component tagging, wire numbering, and drawing modification.
- Know methods of customizing AutoCAD Electrical symbols, circuits, and databases. Other topics covered include title block linking, reporting tools, templates, and project files.

UNIT I INTRODUCTION **10**

AutoCAD Electrical-GUI-Project-Introduction to Project Manager-Working with Projects-Drawing-Adding a Drawing-Create a new Drawing-Drawing Properties-Insert a Component-Connecting a-component

UNIT II CIRCUIT BUILDER **10**

Create a Library Symbol-Symbol Builder-Circuit Builder-Inserting a One-line Motor Circuit-Inserting a Dual One-line Power Feed Circuit-Copy circuitry-Save circuit to icon menu-Component Tools-Inserting Components-Relocating Components-Inserting a Child Components-Aligning and Editing the Components-Catalog Information

UNIT III COMPONENT ATTRIBUTE TOOLS AND WIRES **10**

Wire layers-Wire types-Insert wire-Modify wire-Project

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- How to use the powerful electrical drawing creation tools in the AutoCAD Electrical software.
- Describe the You will create schematic drawings such as ladder logic and point to point, panel drawings, and PLC-I/O circuits using automated commands for symbol insertion, component tagging, wire numbering, and drawing modification.

ADAPTIVE SIGNAL PROCESSING

Course Duration: 27.06.2017-01.07.2017

Venue: PEC-Temple Tower -T212

Course Coordinator: V.Royna Daisy ASP/EEE

17EEVC501 ADAPTIVE SIGNAL PROCESSING

COURSE OBJECTIVES

To enable the students to

- know the fundamentals of the adaptive filter.
- Understand the complex values of filter.
- know the RLs filters for digitalization.

UNIT I FUNDAMENTALS OF ADAPTIVE FILTER 10

General concept of adaptive filtering and estimation, applications and motivation, Review of probability, random variables and stationary random processes, Correlation structures, properties of correlation matrices.

UNIT II COMPLEX VALUES OF FILTER 10

Optimal FIR (Wiener) filter, Method of steepest descent, extension to complex valued The LMS algorithm (real, complex), convergence analysis, weight error correlation matrix, excess mean square error and mis-adjustment

UNIT III RLS FILTERS 10

Introduction to recursive least squares (RLS), vector space formulation of RL Sestimation, seudo-inverse of a matrix, time updating of inner products, development of RLS lattice filters, RLS transversal adaptive filters. Advanced topics: affine projection and subspace based adaptive filters, partial update algorithms, QR decomposition and systolic array.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the non-linear control and the need and significance of changing the control parameters w.r.t. real-time situation.
- Mathematically represent the adaptability requirement
- Understand the mathematical treatment for the modeling and design of the signal processing systems.

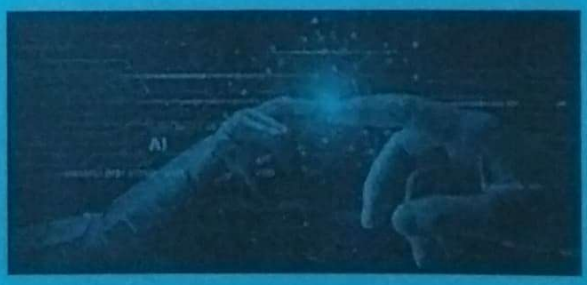
ARTIFICIAL INTELLIGENCE

Course Duration: 27.11.2017-01.12.2017

Venue: PEC-Temple Tower -T212

Course Coordinator: M.Raja AP/EEE



17EEVC601 ARTIFICIAL INTELLIGENCE

COURSE OBJECTIVES

To enable the students to

- know the fundamentals of the artificial neural networks.
- understand the ANN paradigms.
- Understand the concepts of the fuzzy logic.

UNIT I ARTIFICIAL NEURAL NETWORKS 10

Introduction, Models of Neuron Network-Architectures –Knowledge representation, Artificial Intelligence and Neural networks–Learning process-Error correction learning, Hebbian learning – Competitive learning-Boltzmann learning, supervised learning Unsupervised learning–Reinforcement learning-Learning tasks.

UNIT II ANN PARADIGMS 10

Multi-layer perceptron using Back propagation Algorithm (BPA), Self –Organizing Map (SOM), Radial Basis Function Network-Functional Link Network (FLN), Hopfield Network

UNIT III FUZZY LOGIC 10

Introduction –Fuzzy versus crisp, Fuzzy sets-Membership function –Basic Fuzzy set operations, Properties of Fuzzy sets –Fuzzy cartesion Product, Operations on Fuzzy relations –Fuzzy logic –Fuzzy Quantifiers, Fuzzy Inference-Fuzzy Rule based system, Defuzzification methods .

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Fundamentals of the artificial neural networks are studied.
- ANN paradigm is understood for various applications.
- Concepts of the fuzzy logic is studied.

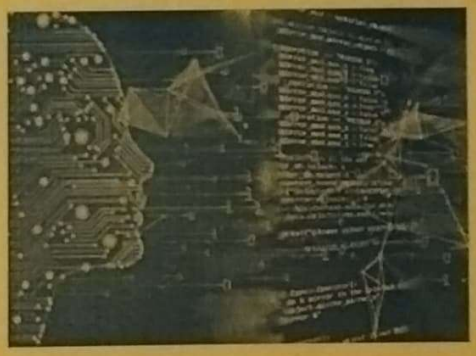
MACHINE LEARNING



Course Duration: 27.06.2017-01.07.2017

Venue: PEC-Temple Tower -T213

Course Coordinator: R.Muthukumar AP/EEE

17EEVC701 MACHINE LEARNING

COURSE OBJECTIVES

To enable the students to

- know the introduction of the machine learning.
- Understand the functions of the vector network.
- know the fundamental and classification of the neural networks.

UNIT I INTRODUCTION 10

Introduction: Learning, Types of Machine Learning. **Some Basic Statistics:** Averages, Variance and Covariance, Gaussian distribution, Bayes theorem. **Concept learning:** Introduction, Version Spaces and the Candidate Elimination Algorithm. **Learning with Trees:** Constructing Decision Trees, CART, Classification Example

UNIT II VECTOR MACHINES 10

Time Series: AR, MA, ARMA, ARIMA , ARMAX for predictions using time dependent data. **Linear Discriminants**: Linear Separability, Linear Regression, **Dimensionality Reduction:** Linear Discriminant Analysis, Principal Component Analysis SUPPORT **Vector Machines**: Optimal Separation, Kernels The Bias-Variance Tradeoff.

UNIT III NEURAL NETWORKS 10

Bayesian learning: Introduction, Bayes Optimal Classifier, Naive Bayes Classifier, Bayesian networks, Approximate Inference, Making Bayesian Networks, Hidden Markov Models, The Forward Algorithm, **Neural Networks :**The Perceptron, Multilayer Perceptron (MLP): Going Forwards, Backwards, MLP in practices, Deriving back Propagation

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Introduction of the machine learning is understood
- Functions of the vector network is understood.
- Fundamental and classification of the neural networks are studied.

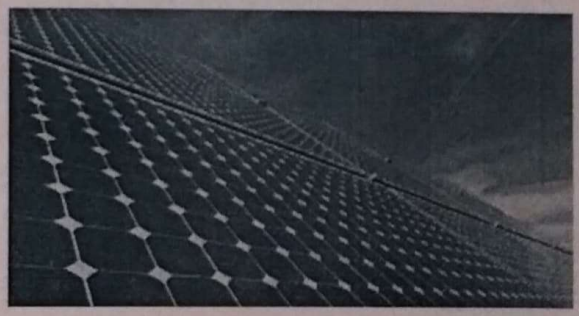
SOLAR PV SYSTEM DESIGN



Course Duration: 27.11.2017-01.12.2017

Venue: PEC-Temple Tower -T213

Course Coordinator: T.Nandagopal AP/EEE

17EEVC801 SOLAR PV SYSTEM DESIGN

COURSE OBJECTIVES

To enable the students to

- know the basics of the solar PV.
- Understand the basic components and functions of the PV.
- know the design procedure of the solar PV.

UNIT I BASICS OF SOLAR PHOTOVOLTAICS **10**

Solar Technologies: Crystalline technology, thin film technology, Bi-facial technology, Comparison between PV module technologies. Solar PV Module: Rating of Solar PV Module, PV Module Parameters and Efficiency of PV Module. Solar photovoltaic system configuration: Grid Connected solar Power Plant, Grid interactive solar power plant, Off-Grid / Hybrid solar power plant, Schemes of solar power plant.

UNIT II COMPONENTS OF A SOLAR PV SYSTEM **10**

Solar panels: Connection of PV Module in Series and Parallel, Estimation and Measurement of PV Module Power, Selection of PV Module. Inverters: Types of solar inverter, Selection of string /central / off grid inverter, Selection of power conditioning unit (PCU), Sizing of solar inverter for roof top and grid connected projects. Batteries: Battery function, Types of Batteries, Battery parameters, Selection of Battery, Charge Controllers: Functions, PWM charge controllers, MPPT charge controllers.

UNIT III DESIGN GUIDE FOR SOLAR PV SYSTEM **10**

Introduction: Energy calculations of a system, Preliminary Planning, Calculating the Energy Yield for a PV Grid-Connected System, Specific Yield. Load calculations: Sizing of Module /Array, Sizing of Storage Battery, Sizing of Charge Controller, Sizing of Wire/ Cable, Sizing of Inverter, Sizing of DCDC Converter.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Describe the Fundamentals of the solar PV studied.
- Analyse the Functions of the PV are studied.
- Design procedure of the solar PV understand.

DEPARTMENT OF MECHANICAL ENGINEERING

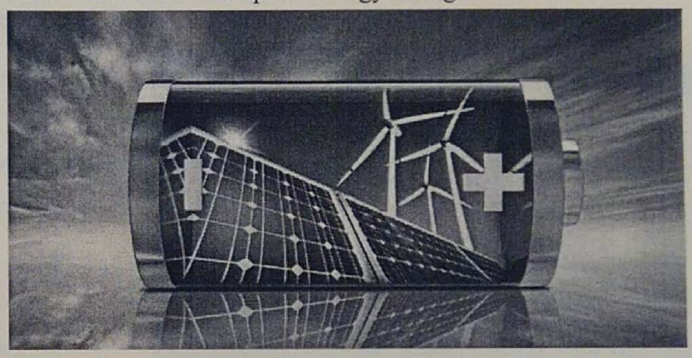
17MEVC301-CONCEPT IN ENERGY STORAGE

ABOUT THE COURSE:

This course is primarily for students who were interested in the field of energy storage systems. The course details the analysis of energy storage systems and can be referenced by different engineering sectors, including: mechanical, chemical, and civil and energy engineering, and is equally important for scholars of physics and chemistry.

INTENDED AUDIENCE:

- II-, III- and IV-year students those wants to know the concept of Energy storage
- Those wants to identify the different types of energy storage system and its principle.
- Those wants to develop their knowledge in the field energy storage.



DURATION OF THE COURSE:

Period: 17.07.2017 to 21.07.2017

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. understand need of energy storage systems
2. acquire knowledge pertaining to various ways to store energy, its analysis and use
3. focus and develop hydrogen storage and fuel cell systems though research

COURSE CO-ORDINATOR:

1. **Mr. P.ELUMALAI, ASP/MECH, PEC**
2. **Mr. S.MANIKANDAN, AP/MECH, PEC**
3. **Mr. T.ARUNKUMARAP/MECH, PEC**

VENUE:

SEMINAR HALL,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 11.07.2017.

Scanned by CamScanner

17MEVC301 **CONCEPT IN ENERGY STORAGE**

COURSE OBJECTIVES

To enable the students to

- know the need of energy storage.
- know different form of energy storage system.
- Understand the concepts and application of energy storage.

1. **Introduction to Renewable Energy Systems and the Role of Energy Storage**

   History of energy storage from the perspective of the carbon cycle. Natural process of photosynthesis, Biomass, peat, and fossil carriers, and finish in the time of renewables.

2. **Energy Storage Classification**

   storage and energy storage systems, application and how they are classified according to physical, temporal and economic criteria

3. **Lead Acid Batteries**

   Electro-chemical energy storage the terms batteries and accumulators, electrodes, electrolyte Ion-conductive phase.

4. **Lithium Batteries**

   Electro-chemical energy storage the terms batteries and accumulators, electrodes, electrolyte Ion-conductive phase for lithium batteries.

5. **Chemical Energy Storage I**

   Chemical energy storage is the backbone of the conventional energy supply. Solid (wood & coal), fluent (crude oil) and gaseous (natural gas) energy carriers are different types of energy storage

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Select suitable energy storage system depending on necessity.
- Use relevant storage system for particular application.
- Differentiate the various storage system.

(AUTONOMOUS)

DEPARTMENT OF MECHANICAL ENGINEERING

17MEVC401-ANSYS II

ABOUT THE COURSE:

ANSYS is a popular and well recognised general purpose finite element modelling package for numerically solving a large range of problems including static, dynamic mechanical, structural analysis (linear and non-linear), heat transfer and fluid problems, as well as acoustic and electromagnetic problems. It is widely used in the mechanical, automobile, structural, chemical and aeronautical industries

INTENDED AUDIENCE:

- II-, III- and IV-year students those wants to know the basics Finite element modelling.
- Those wants to improve their knowledge on simulation software.
- Those wants to learn heat and structural analysis on mechanical components.

DURATION OF THE COURSE:

Period: 27.11.2017 to 01.12.2017

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. use the ANSYS package to solve basic engineering analysis problems using FEA techniques.
2. make the analysis on the most of the engineering components.
3. modelling the components in the ANSYS work bench.

COURSE CO-ORDINATOR:

1. **Mr. S.PRABHAKARAN, AP/MECH, PEC**
2. **Mr.S.A.VENKATESH, AP/MECH, PEC**
3. **Mr.K.RAMACHANDRAN AP/MECH, PEC**

VENUE:

CAD/CAM Lab

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 22.11.2017.

17MEVC401 **ANSYS - II**

COURSE OBJECTIVES

To enable the students to

- learn the concept of Static Structural Analysis
- Understand the concepts Surface and Line Model
- familiarize with thermal analysis.

1 **STATIC STRUCTURAL ANALYSIS**

Static Structural Analysis of Cantilever Beam, Plate with a central circular hole, Plate with a square slot, Pressure vessel, Bracket, Clevis assembly.

2 **SURFACE AND LINE MODEL**

Introduction - Sheet with circular hole-plane stress - Pressure vessel - Line body model

3 **NATURAL FREQUENCIES**

Modal analysis - Gear Box Housing without Prestress - Gear Box Housing with Prestress - Rotor Assembly.

4 **BUCKLING LOADS**

Buckling analysis of - Fixed free column (flag pole) - Pinned-pinned column - Built-up structure.

5 **THERMAL ANALYSIS**

Important terms used in thermal analysis - Types of thermal analysis - Steady state thermal analysis of - Car Disk Brake Rotor - Heat sink.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Familiarize the requirements of Static Structural Analysis
- Apply knowledge on Surface and Line Model
- Evaluate the various analysis.

17MEVC501-INSPECTION TECHNIQUES FOR WELDING

ABOUT THE COURSE:

The inspection of welds can be conducted for a number of reasons. Perhaps the most fundamental reason is to determine whether the weld is of suitable quality for its intended application. In order to evaluate a weld's quality, we must first have some form of measuring block with which to compare its characteristics. It is impractical to attempt to evaluate a weld's quality without some form of specified acceptance criteria.

INTENDED AUDIENCE:

- II-, III- and IV-year students those wants to know the basics of inspection techniques for welding.
- Those wants to improve their knowledge on welding inspection.
- Those wants to know the various operating techniques for inspection methods.

DURATION OF THE COURSE:

Period: 26.06.2017 to 30.06.2017

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Function safely in a welding shop environment.
2. Operate oxyacetylene portable and track cutting systems in accordance with industry standards.
3. Apply knowledge of puddle control and bead placement to produce fillet welds in all positions.
4. Use an understanding of welding codes and industry standards in order to weld common joint configurations.

COURSE CO-ORDINATOR:

Mr.K.Anand, Mr.T.Thangavel,
Mr.S.A.Venkatesh, Mr.C.Suresh Ap/Mech - PEC

VENUE:

Seminar Hall,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 20.06.2017.

17MEVC501 INSPECTION TECHNIQUE FOR WELDING

COURSE OBJECTIVES

To enable the students to

- describe importance of welding inspection
- prepare test plan for given welded job as per ASME / AWS
- describe mechanical testing of weldments as per ASTM / ASME

1. **Basics of Welding Inspection and Testing**

   Scope, Definition, Application Basic Testing Symbols Illustration of Welding & Testing Symbols. Ethical and essential requirements for the Welding Inspector. Welding Inspection Operation. Quality Assurance for WI&T. Welding Metallurgy related toWI&T.

2. **Weld and Weld Related Discontinuities**

   Classification of welding related Discontinuities Dimensional Discontinuities -Distortion-Overlap -Desirable, acceptable and unacceptable fillet weld profiles.-Acceptable and unacceptable Butt weld profiles.

3. **Weldment & related discontinuities**

   Standard versus special equipment-material of construction for process equipments, selection criteria, and specification sheets.

4. **Mechanical and chemical weld metal properties**

   Filler metal properties-Base metal properties-Edge laminations -Lamellar Tearing -Arc Strikes

5. **Welding Procedure Specification (WPS & PQR)**

   Description ,Application important details, Example of Qualification WPS, Preparation of sample joints, Testing of representative samples, Evaluation of overall preparation, welding testing & end results

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of plant design for an industry.
- Apply the concepts for making plant designing for an industry.
- Represent the designing structure of the plant.

DEPARTMENT OF MECHANICAL ENGINEERING

17MEVC601-CATIA V5

ABOUT THE COURSE:

CATIA V5 or Computer Aided Three Dimensional Application is a powerful 3D parametric solid modeling software. It enables the development of high-quality mechanical products. It allows users to design shapes with 3D sketching and visualization features. Most importantly, its engineering, design, and system engineering capabilities make it very useful for the product manufacturing industry.

INTENDED AUDIENCE:

- II-, III- and IV-year students those interested in 3D modelling and designing.
- Those wants know about the various tools and commands used for 3 D modelling and designing of mechanical components. .
- One who wants to know specific application of CATIA software in mechanical field.

DURATION OF THE COURSE:

Period: 27.11.2017 to 01.12.2017

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. use their capacity of vision to interpret and/or convey the technical information in an industrial drawing.
2. able to apply graphical representation techniques using traditional metric geometry and descriptive geometry methods.
3. know, identify, interpret and apply the current standards on Industrial Technical Drawing. Computer aided design applications that allow students to elaborate and use graphical and technical

COURSE IN CHARGES:

17MEVC601 **CATIA V5**

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling
- develop the analysis process of mechanical components.
-

INTRODUCTION TO CATIA

Introduction to CATIA-History of CATIA-CATIA modeling process, Parametric design concept, feature based design etc-CATIA Features-SKETCHER-Creating a new part.

SKETCHER WORKBENCH

Basic sketch, Sketch in task environment, Selection tools-Profile, Predefined shapes, Circles, Spline, Conics, Line, Points-Operations, Corner, Chamfer, Relimitation tools-Projections, Transformations-Constraints, Sketch tools, Grid, Snap on grid, Construction-Geometrical constraints, Dimensional constraints., Sketch analysis-Visualization tools, View tool bar, Workbench.

TOTAL PERIODS **30**

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

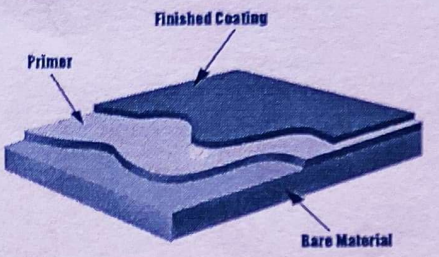
17MEVC701-APPLICATIONS OF SURFACE COATINGS

ABOUT THE COURSE:

To enable the students to understand the importance of coating in industry and to know the various types of coating materials. Also, to understand the various methods to adopt the coating of the materials.

INTENDED AUDIENCE:

- II-, III- and IV-year students those who wants to know the importance of coating in materials.
- Those wants know various types of coating materials and coating methods.
- One who wants to know specific application of coating in mechanical field.



DURATION OF THE COURSE:

Period: 27.06.2017 to 01.07.2017

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Select coating method for a given product.
2. Use relevant coating for particular application.
3. Use surface treatments with the substrates for adhesion.

COURSE IN CHARGES:

SEMINAR HALL II,

PAAVAI ENGINEERING COLLEGE.

Note: Interested students enroll their name to the course in charge on or before 21.06.2017.

17MEVC701 APPLICATIONS OF SURFACE COATINGS

COURSE OBJECTIVES

To enable the students to

- know the basics of coatings.
- know different materials used for coating.
- understand the concepts and application of surface coating.

1. **Coating**

   Properties and applications of the given materials used in surface coating preparation, solvent containing systems and enamels.

2. **Application of Coatings**

   Rod coating, Dip coating, Effects of given factors on bio-degradation. Premiered coatings occurring procedure of coatings and its application.

3. **Coating methods**

   Roll coating, Reverse roll coating, gravure roll coating, Premiered coatings like extrusion coaters Slide or cascade coaters, curtain coaters, cast Coating

4. **Adhesives**

   Interfacial contact, Surface tension wettability and spreading, Basic terminology-adhesive, adherent, substrate. Types of adhesives.

5. **Composition of adhesives**

   Composition of adhesives-backbone polymer, solvent thinner, catalyst, hardener, extension-filler, plasticizers, prevention process, resin kettle.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Select coating method for a given product.
- Use relevant coating for particular application.
- Use surface treatments with the substrates for adhesion.

TEXT BOOKS

1 Paints and surface coatings: Theory and Practice. Lambourne, R. and Strivens, T. A.

DEPARTMENT OF MECHANICAL ENGINEERING

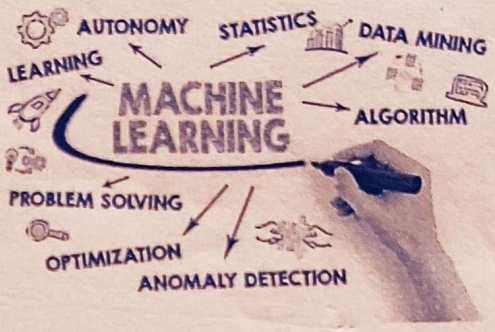
17MEVC801-INTRODUCTION TO MACHINE LEARNING

ABOUT THE COURSE:

Machine learning is the technology of designing and implementing algorithms that allow computers to automatically learn from data or past experience and improve their performance without being explicitly programmed. This course covers the fundamental concepts of machine learning and popular machine learning algorithms, core concepts of supervised learning, unsupervised learning along with hands-on problem solving using simple python programming.

INTENDED AUDIENCE:

1. II-, III- and IV-year students those who wants to know technology based data handling in industry.
2. Those wants know to basics of machine learning.
3. One who wants to know specific application of machine learning concept in mechanical field.



DURATION OF THE COURSE:

Period: 27.11.2017 to 01.12.2017

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Explain Machine Learning concepts, classifications of Machine Learning and write simple programs using python.
2. Discuss simple Machine Learning applications in a range of real-world applications using Python programming
3. Describe unsupervised learning concepts and dimensionality reduction techniques.

COURSE IN CHARGES:

1. **Mr. S.MANIRAJ**,AP/MECH, PEC
2. **Mr.S.T.KUMARAVEL**, AP/MECH,PEC
3. **Mr. G.SURESHKUMAR**, AP/MECH,PEC

VENUE:

SEMINAR HALL I,

PAAVAI ENGINEERING COLLEGE.

Note: Interested students enroll their name to the course in charge on or before 22.11.2017.

17MEVC801 INTRODUCTION TO MACHINE LEARNING

COURSE OBJECTIVES

To enable the students to

- Understand the fundamentals of various machine learning algorithms
- gain knowledge on important methods in ANN, Fuzzy and Genetic algorithm
- study the machine learning algorithms for various heuristic and non-heuristic algorithms

1 INTRODUCTION

Introduction to learning & classifiers- LDA - ANN - Naive Bayes classifier- decision tree Regression.

2 SUPERVISED LEARNING METHODS

Ordinary Least Squares - linear and Logistic Regression- Gaussian process -Stepwise Regression - Multivariate Adaptive Regression Splines (MARS).

3 SEMI SUPERVISED LEARNING METHODS

Locally Estimated Scatterplot Smoothing (LOESS) - overview of nearest neighbour - Support vector machines- Temporal difference learning - Q-learning.

4 UNSUPERVISED

Expectation -maximization (EM) - Vector quantization, Clustering Fuzzy K & C means algorithm - Density-based spatial clustering of applications with noise (DBSCAN) - Conceptual Clustering- Association rule learning - Apriori algorithm- SVD

5 NEURAL NETWORK

Perceptron - Probabilistic Neural Network (PNN) - Back-Propagation (BPN) - Hopfield Network - Self-Organizing Map (SOM).

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Differentiate the basics of supervised and semi supervised learning methods.
- Retrieve the unsupervised and reinforcement learning methods involved in artificial learning
- Interpret the concept of artificial neural networks and their control applications

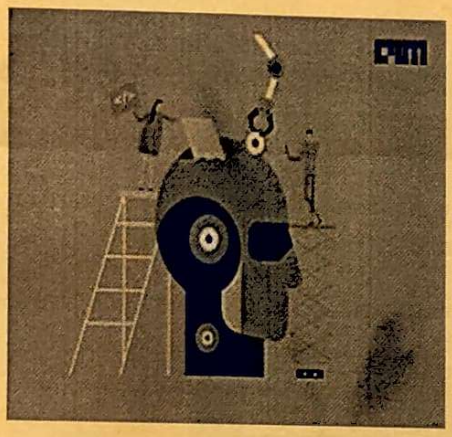
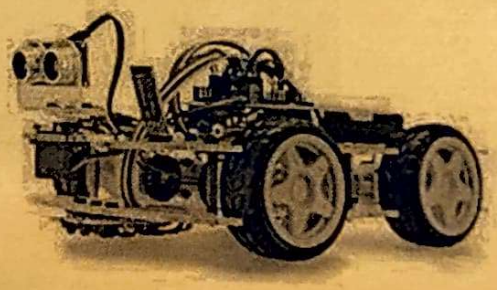
DEPARTMENT OF MECHATRONICS

Training Course

INTRODUCTION TO MOBILE ROBOTICS





DATE OF THE COURSE: 26.6.2017 to 30.6.2017

VENUE: MECHATRONICS DEPARTMENT

COURSE IN CHARGE

R. ARUNBABU AP/MCT

17MTVC301 **INTRODUCTION TO MOBILE ROBOTICS**

COURSE OBJECTIVES

To enable the students to

- learn the fundamentals of robotics and components of robots.
- impart knowledge on end effectors and its design.
- familiarize with the robot kinematic equations

UNIT 1 INTRODUCTION

Mobile Robots – Types of mobile robots: Automated Guided vehicles (AGVs)- Service robots -Cleaning robots – Social Robots – Field Robots –Inspection and exploration robots- Humanoid robots– Nuclear robots – Underwater Robots - Autonomous Surface Vessels. Applications of mobile robots

UNIT 2 KINEMATICS

Kinematics models of mobile robots: Kinematic Models and Constraints – Hilaire mobile robots – Car-like mobile robots –Mobile Robot Manoeuvrability-Mobile Robot Workspace. Motion Control.

UNIT 3 LOCOMOTION

Introduction- Legged Mobile Robots- Leg configurations and stability- Examples of legged robot locomotion- Wheeled Mobile Robots- Wheeled locomotion: the design space- Wheeled locomotion.

UNIT 4 SENSORS FOR MOBILE ROBOTS

Representing Uncertainty- Feature Extraction -Mobile robot localization- Challenge of Localization: Noise and Aliasing - Map Representation - Probabilistic Map based Localization - Probabilistic Map-Based Localization.

UNIT 5 PLANNING AND NAVIGATION

Introduction- Competences for Navigation: Planning and Reacting- Navigation Architectures- Modularity for code reuse and sharing- Control localization- Techniques for decomposition- Case studies: tiered robot architectures.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- identify various domains for robotic systems applications
- develop the kinematic model of mobile robots
- analyse the different concepts of locomotion

TEXT BOOKS

1. Roland Siegwart, Illah Reza Nourbakhsh and Davide Scaramuzza, ―Introduction to Autonomous Mobile Robots‖, 2nd Edition, MIT Press, Cambridge, 2011.

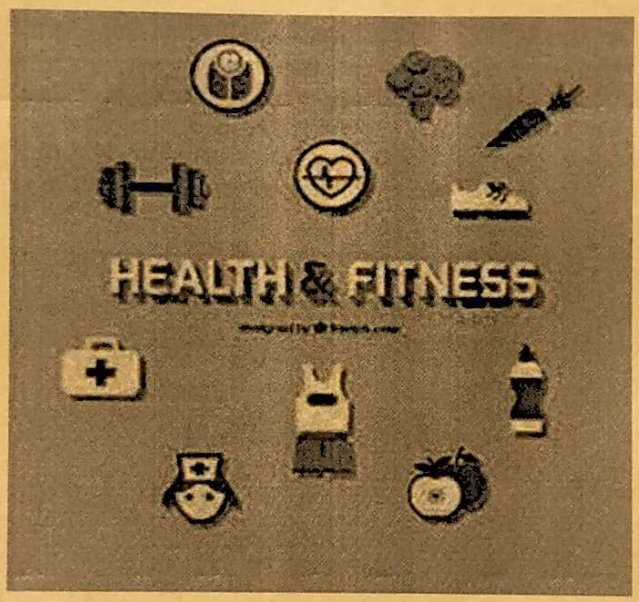
HEALTH AND FITNESS



DATE OF THE COURSE: 27.11.2017 to 1.12.2017

VENUE: MECHATRONICS DEPARTMENT

COURSE IN CHARGE

M.YUVARAJ, AP/MCT

17MTVC401 **HEALTH AND FITNESS**

COURSE OBJECTIVES

To enable the students to

- understand the fundamental concepts about physical.
- understand the importance of fitness & its types,
- aware of training and assessment of physical fitness.

UNIT 1 **FITNESS**

Meaning & Definition, Need & importance of Physical fitness Types Physical fitness - Exercise, Training and Conditioning and it is important

UNIT 2 **YOGA AND MEDITATION**

Meaning and definition; Principles of practicing; Basic Asana and it important, Pranayama and Meditation - Relaxation Techniques

UNIT 3 **NUTRITION AND BALANCE DIET**

Nutrition and Balance Diet: Needs and Important, Significant of Nutritional Food - Tips for balance diet. Common Diseases for IT professionals: Common diseases – cause, prevention First aid for common sports injuries

UNIT 4 **LIMBS OF YOGA**

Eight Limbs of Yoga - Sattvic, Rajasic, Tamasic Foods and Thoughts - Science of Yoga Loosening Exercises.

UNIT 5 **YOGA BENEFITS**

Yogasanas & Benefits - Super Brain Yoga - Surya Namaskar Standing Asanas - Yoga in today's scenario- Schools of Yoga.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- acquire the knowledge and training of the individual physical, mental and social concepts
- understand the fundamental concepts of yogic practice and physical fitness
- acquire the knowledge about nutrition and health consciousness

VENUE: MECHATRONICS DEPARTMENT

COURSE IN CHARGE

S. PUNITHAN, AP/MCT

17MTVC501 AUTOCAD AND ITS APPLICATIONS

COURSE OBJECTIVES

To enable the students to

- how to organize the drawing within the printing area.
- Write the single text and multi-line text in the drawing.
- make the hatching to provide the sectioning area.

UNIT 1 DRAWING TEMPLATES

Using Template Files (.dwt) to Make New Drawing Exploring, Settings and Elements are saved with Templates.

UNIT 2 ORGANIZING YOUR DRAWING WITH LAYER AND OBJECT TYPES

Layer States Properties by Layer Tools. Polylines, Arcs, Polygons, Ellipses

UNIT 3 ADVANCED EDITING COMMANDS AND INSERTING BLOCKS

Trim and Extend, Fillet and Chamfer, Polyline Edit and Spline, Offset and Explode Join, The Insert Block Command Inserting Blocks with Tool Palettes Dynamic Blocs Migrating Blocks and other Elements between Drawings with Design Center.

UNIT 4 TEXT

The Multiline Text Tool the Single Line Text Tool Editing Text in Model Space vs. Paper Space the Multilayer Tool

UNIT 5 HATCHING

The Hatch Command, the Hatch Editor Ribbon Tab Saving and Applying Hatches with Tool Palettes.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Create the drawing within the printing zone.
- Write the text and hatching in the drawing zone.
- Create the drawing by using advanced tools.

VENUE: MECHATRONICS DEPARTMENT

COURSE IN CHARGE

D.K. KARHIKEYAN, AP/MCT

17MTVC601 **CNC BASIS**

COURSE OBJECTIVES

To enable the students to

- know the basics of CNC codes and Machine.
- know different Coding for different operations. .
- write the program to various operations.

UNIT 1 FUNDAMENTALS OF PROCESS PLANNING

Process planning Structure of process plan Factors influencing process plan Sequence of operation of process plan.

UNIT *2* CNC SYSTEMS

CAM, NC, CNC and DNC2.2Selection criteria for CNC machines.2.3Adoptive Control.

UNIT 3 CONSTRUCTIONAL FEATURES OF CNC MACHINES

Classifications of CNC Machine, Modes of operation of CNC, Working of: Machine Structure, Sideways, Spindle drive, Axis drive,

UNIT 4 SPECIAL FEATURES IN CNC MACHINES

Recirculating ball screw Feedback devices (transducers, encoders), Automatic tool changer (ATC), Automatic pallet changer (APC), CNC axis and motion nomenclature, CNC tooling's –tool pre-setting, qualified tool, tool holders and inserts

UNIT 5 CNC PART PROGRAMMING

Machine zero, home position, work piece zero, programme zero.4.3CNC part programming: Programming format and Structure of part programme.4.4ISO G and M codes for turning and milling-meaning and applications of important codes

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify different axes, machine zero, home position, systems and controls CNC machines.
- Select, mount and set cutting tools and tool holders on CNC
- Prepare part programmes using ISO format for given simple components with and without Use of MACRO, CANNED CYCLE and SUBROUTINE using ISO format.

CONSERVATION OF ENERGY

DATE OF THE COURSE: 27.6.2017 to 1.7.2017

VENUE: MECHATRONICS DEPARTMENT

COURSE IN CHARGE

V.K. GOBINATH, AP/MCT

17MTVC701 CONSERVATION OF ENERGY

COURSE OBJECTIVES

To enable the students to

- know familiar with the energy efficient devices.
- know the various approaches to conserve energy.
- Understand how to approaches efficient energy management.

UNIT 1 ENERGY CONSERVATION AND EFFICIENCY

Introduction, About Bureau of Energy Efficiency and it's Schemes, Energy Rating, consumption and energy efficient devices Energy Efficiency and its significance

UNIT 2 ENERGY EFFICIENCY IN BUILDINGS AND ENERGY AUDIT

ECBC and Tips for Energy Conservation, Definition, objective, types and methodology of Energy Audit

UNIT 3 INSTRUMENT FOR ENERGY AUDIT

Instruments for Energy Audit, Case studies and Building survey

UNIT 4 COST BENEFIT ANALYSIS

Arithmetic Operator, Logical, Relational, Example for above operators.

UNIT 5 ENERGY AND ITS USE

Introduction, Types of Renewable Energy Sources, Electric vehicle.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- differentiate the various energy efficient devices.
- use of various methods Energy conserve methods.
- approach the various Energy management techniques

TEXT BOOKS

1. Energy Conservation and Audit by Mr. Amit L. Nehete

17MTVC801 BASICS OF ARTIFICIAL INTELLIGENCE

COURSE OBJECTIVES

To enable the students to

- Know the basics concept artificial intelligence.
- Know the effect artificial intelligence in industry oriented.
- Apply AI techniques for different industrial application

UNIT 1 INTRODUCTION

A brief review of AI history, what is artificial intelligence, Related research fields.

UNIT 2 PRODUCTION SYSTEM

Production system, Inference engine, Working memory, Knowledge base, Pattern matching,

UNIT3 ONTOLOGY

What is ontology, Semantic network, Frame, Structural knowledge, Declarative knowledge, Procedural knowledge.

UNIT 4 FUZZY LOGIC: HUMAN-LIKE DECISION MAKING

Definition of fuzzy set, Membership function, Notation of fuzzy set, Operations of fuzzy set, Fuzzy number and operations, Extension principle, Fuzzy rules, De-fuzzification, Fuzzy control.

UNIT 5 PATTERN RECOGNITION

Concept and concept learning, Pattern classification and recognition. Feature vector representation of patterns. Nearest neighbor-based learning, Discriminant function and decision boundary. Multi-class pattern recognition, General formulation of machine learning. The k-means algorithm.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of AI
- Apply the concepts for automation of industry.
- Apply the various engineering application.

ADVANCED MATERIALS AND CHARACTERIZATION

on July 17th to 21st 2017 .

Venue: Temple Tower T-304

Course Coordinator

D. Sreenivasan

Assistant Professor, Chemical Engineering

17CMVC601- ADVANCED MATERIALS & CHARACTERIZATION		
COURSE OBJECTIVES		
To enable the students to gain knowledge on		
• Processing methods, microstructure and mechanical characterization techniques used in industries and research. • Advances on materials for diversified applications.		
ADVANCED MATERIALS Advanced materials for automobile, space, defense etc. - Importance - case studies - Functionally graded materials - SAP - ECAP process - ultrafine grained materials - composite preparation by stir casting – quality control. POWDER METALLURGY RESEARCH Selection and characterization of powders - compacting and sintering : Metal, polymer and ceramic based composites - advantages – applications MODERN METALLIC MATERIALS Dual phase steels - High strength low alloy steel - Transformation induced plasticity steel - maraging steel - nitrogen steel – Ni and Ti aluminides – smart materials - shape memory alloys – Metallic glass and nano crystalline materials.		
	TOTAL PERIODS	**30**
COURSE OUTCOMES		
At the end this course, students will be able to		
• to fabricate the components by various manufacturing techniques. • Do their research in the areas of materials science and metallurgical engineering. • Understand the knowledge about the properties of nano materials.

Period: June 27th to July 1st 2017

Venue: Temple Tower T-304

Course Coordinator

S.Nagul Dev

Assistant Professor, Chemical Engineering

17CMVC401- SOLAR ENERGY UTILISATION		
COURSE OBJECTIVES		
To enable the students to gain knowledge on		
• Solar energy, Photovoltaic cells, Solar cell and its applications • Thermal conversion and methods, Thermo electric Conversion systems		
INTRODUCTION TO SOLAR ENERGY Introduction, overview of applications - calculation of solar constant, terminology related to solar radiation, definition and calculation of solar times, definition and calculation of all solar angles and related earth angles. PHOTOVOLTAICS Fundamentals of solar cells: types of solar cells, semiconducting materials Solar cell properties and design SOLAR CELL Solar Cell Applications - Solar cell manufacturing processes: material resources, environmental impacts; Thin film solar cells - Single crystal, polycrystalline and amorphous silicon solar cells, cadmium telluride thin-film solar cells, conversion efficiency.		
	TOTAL PERIODS	**30**
COURSE OUTCOMES		
At the end this course, students will be able to		
• Calculate solar time, local time, direct and indirect solar radiation for the given location using earth sun geometry • Categorize solar cell materials with its properties and calculate energy conversion efficiency of solar cells • Analyze the Performance of thermo-electric devices: generators, refrigerators and heat pumps

GREEN TECHNOLOGY

Date: November 27th to December 1st 2017

Venue: Temple Tower T-303

Course Coordinator

G. Srinivasan

Professor, Chemical Engineering

17CMVC301- GREEN TECHNOLOGY

COURSE OBJECTIVES

To enable the students to gain knowledge on

- the green technology concepts and relevance in twenty first century requirements
- indicators of sustainability and their use
- the environmental and sustainability issues

INTRODUCTION The concept of green technology; evolution; nature, scope, importance and types; developing a theory; green technology in India; relevance in twenty first century.

SUSTAINABILITY & ENVIRONMENT Organizational environment; Indian corporate structure and environment; how to go green; spreading the concept in organization; environmental and sustainability issues for the production of high-tech components and materials.

ECOSYSTEM APPROACHES Approaches from ecological economics; indicators of sustainability; ecosystem services and their sustainable use; bio-diversity; Indian perspective; alternate theories.

TOTAL PERIODS	**30**

COURSE OUTCOMES

At the end this course, students will be able to

- Outline the green technology concepts
- Criticize the environmental reporting, ISO 14001, ISO 14064, financial initative by UNEP.
- Analyze the green tax incentives and rebates, business redesign and its models.

TEXT BOOKS

1. Green Technology and Green Technologies: Exploring the Causal Relationship by Jazmin Seijas Nogarida, 2008.

17ITVC301 & INTRODUCTION TO CEH

Ethical Hacking Fundamentals (E|HF) is an entry-level security program covering the fundamental concepts of information security. It equips students with the skills required to identify the increasing information security threats which reflect on the security posture of the organization and implement general security controls. This program gives a holistic overview of the key components of information security.

COURSE CONTENT

- Introduction
- Introduction to Ethical Hacking
- Footprinting and Reconnaissance

INTENDED AUDIENCE:

- **II Year of B.E/B.Tech Students**

Date: 17.07.17 to 21.07.17

Venue: Class Room no-M311

COURSE COORDINATORS

1. S.SARAVANAKUMAR, AP/IT

2. N.HEMALATHA, AP/IT

17ITVC301 INTRODUCTION TO CEH

COURSE OBJECTIVES

To enable the students to

- To Explore ethical hacking basics
- To Explore wireless network hacking
- To Investigate reconnaissance: Information gathering for the ethical hacker

Module 1: Introduction

- Course Introduction
- Introduction to the CEH Certification

Module 2: Introduction to Ethical Hacking

- Fundamental Security Concepts
- Information Security Threats and Attacks
- Introduction to Ethical Hacking
- Introduction to the Cyber Kill Chain
- Introduction to Security Controls
- Introduction to Security Laws and Standards

Module 3: Footprinting and Reconnaissance

- Introduction to Footprinting
- Website Footprinting
- DNS Footprinting
- HTTrack (Demo)
- Shodan (Demo)
- Google Hacking Database (Demo)
- LinkedIn (Demo)
- Job Boards (Demo)
- whois (Demo)

- Banner Grabbing (Demo)
- theHarvester (Demo)

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze ethical hacking basics
- Implement wireless network hacking
- Implement Information gathering for the ethical hacker

TEXT BOOKS

1. Hacking: The Art of Exploitation, 2nd Edition 2nd Edition, Kindle Edition by Jon Erickson.

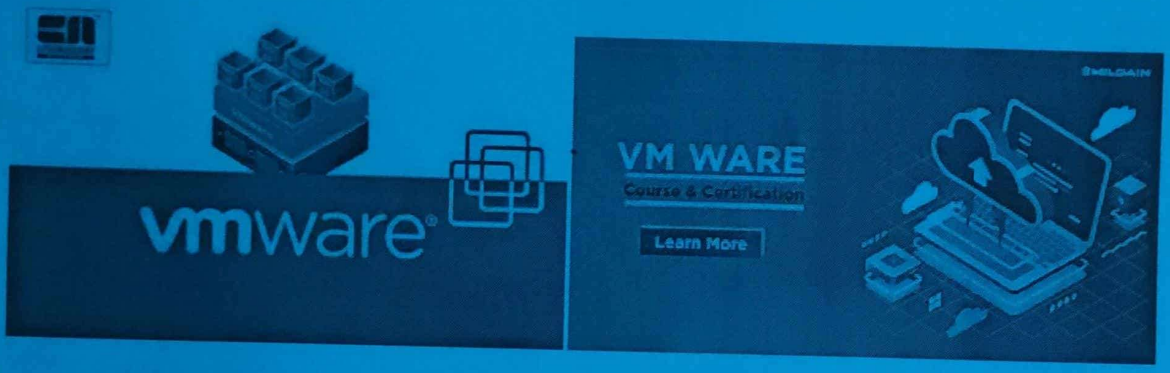
17ITVC401 & VMWARE VIRTUALIZATION

The hypervisor serves as a platform for running virtual machines and allows for the consolidation of computing resources. Each virtual machine contains its own virtual, or software-based, hardware, including a virtual CPU, memory, hard disk, and network interface card.



COURSE CONTENT

- Introduction to Virtualization Technologies
- Introduction to VMware Virtualization
- VMware ESX and ESXi

INTENDED AUDIENCE:

- **II Year of B.E/B.Tech Students**

Date: 27.11.17 to 01.12.17

Venue: Class Room no-M311

COURSE COORDINATORS

1. M.PUSHPALATHA, ASP/IT
2. R.JAYAVADIVEL, AP/IT

17ITVC401 **VMWARE VIRTUALIZATION**

COURSE OBJECTIVES

To enable the students to

- To Explore the many significant benefits of virtualization
- To Understand about VMware Virtualization
- To Understand, create and manage high availability clusters to protect against VM service loss caused by ESXi server failures

Module 1 Introduction to Virtualization Technologies

• VMware workstation

• VMware player

• Virtual box

Module 2. Introduction to VMware Virtualization

• Introduce Virtualization

• Introduce Virtual machines

• Introduce vSphere components

Module 3. VMware ESX and ESXi (ESX/ESXi 4.1)

• Introduce the architecture of ESX and ESXi

• Manually configure ESX/ESXi

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze the many significant benefits of virtualization
- Implement about VMware Virtualization
- Demonstrate create and manage high availability clusters to protect against VM service loss caused by ESXi server failures

TEXT BOOKS

1.Learning VMware vSphereby Abhilash G B, Rebecca Fitzhugh Released October 2016.

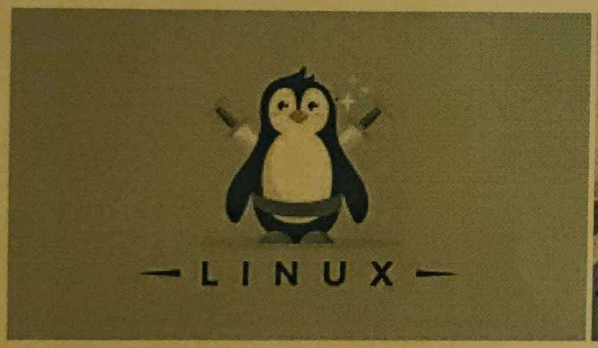
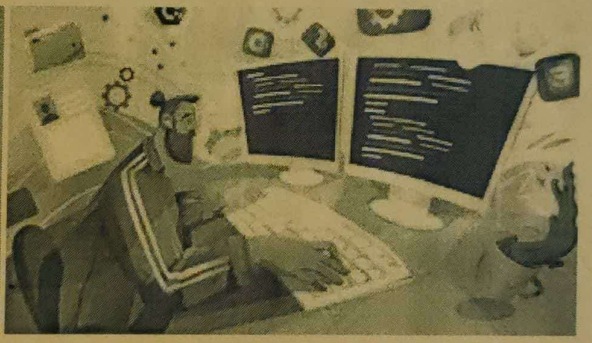
VALUE ADDED COURSE

17ITVC501 & LINUX COMMANDS WITH OPEN STACK

Open Stack is a cloud operating system that controls large pools of compute, storage, and networking resources throughout a datacenter, all managed and provisioned through APIs with common authentication mechanisms.





COURSE CONTENT

- Introduction to Linux
- Architecture & features
- OpenStack image service (Glance)

INTENDED AUDIENCE:

- **III Year of B.E/B.Tech Students**

Date: 27.06.17 to 01.07.17

Venue: Class Room no-M310

COURSE COORDINATORS

1. V.SARAVANABHAVAN, AP/IT
2. D.YOGAPRIYA, AP/IT

17ITVC501 LINUX COMMANDS WITH OPEN STACK

COURSE OBJECTIVES

To enable the students to

- To Explore OpenStack architecture with both CLI and API functionalities
- To Implement and use Nova, Neutron, Image and other OpenStack services
- To Work on an interactive project around implementing OpenStack

Module 1:Introduction

- Introduction to Linux
- Linux admin commands
- Introduction to Cloud
- Comparison with Amazon AWS and RackSpace cloud
- Other Cloud frameworks
- Introduction to OpenStack and its components
- Virtualization techniques

Module 2:Compute (Nova)

- What is nova
- Supported hypervisors
- Xen, LXC, KVM, Qemu, VMWare
- Architecture & features

- Control Flow
- Building a Platform as a Service using Docker/LXC?

Module 3:OpenStack image service (Glance)

- What is Glance
- Supported image formats
- Creating, uploading and using an image
- Architecture & features
- Control flow

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze OpenStack architecture with both CLI and API functionalities
- Implement and use Nova, Neutron, Image and other OpenStack services
- Analyze interactive project around implementing OpenStack

VALUE ADDED COURSE

17ITVC601 & ORACLE WITH MYSQL

Oracle MySQL Database Service is a fully managed database service that lets developers quickly develop and deploy secure, cloud native applications using the world's most popular open source database.

COURSE CONTENT

- Introduction To SQL
- Data Retrieval Techniques
- Working With DDL Commands

INTENDED AUDIENCE:

- **III Year of B.E/B.Tech Students**

Date: 27.11.17 to 01.12.17

Venue: Class Room no-M310

COURSE COORDINATORS

1. S.SARAVANAKUMAR, AP/IT
2. N.HEMALATHA, AP/IT

17ITVC601 ORACLE WITH MYSQL

COURSE OBJECTIVES

To enable the students to

- To Understand about basics of SQL.
- To Learn about retrieving data from stored data.
- To Focuses on the creating table with DDL commands.

Module 1: Introduction To SQL

1. Introduction Database
2. Understanding DBMS vs RDBMS
3. Gone through SQL Standards
4. Sub languages of SQL
5. Difference between 10g vs 11g vs 12c
6. Installation of 12c
7. About SQL*Plus and use of developer tool
8. Datatypes in Oracle
9. Operators in Oracle
10. Understanding Schema design and objects

Module 2: Data Retrieval Techniques

1. How to use select statement in different ways to retrieve records?
2. Working with Column alias
3. Working with Table alias
4. Data filtering and sorting with in single table
5. Clauses and its types in oracle

    - Where clause
    - Having clause
    - From clause
    - Group by clause

- Order by clause
- Using clause
- Constraint clause
- For update clause

Module 3: Working With DDL Commands

1. Table creation using CREATE statement
2. Creating table from another table
3. Dropping a table using DROP command
4. Altering the column of a table
5. Modifying the column datatype in a table
6. Renaming the column of a table
7. Renaming an entire table
8. Using truncate command
9. Difference between Delete and Truncate command

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze basics of SQL.
- Demonstrate retrieving data from stored data
- Implement creating table with DDL commands.

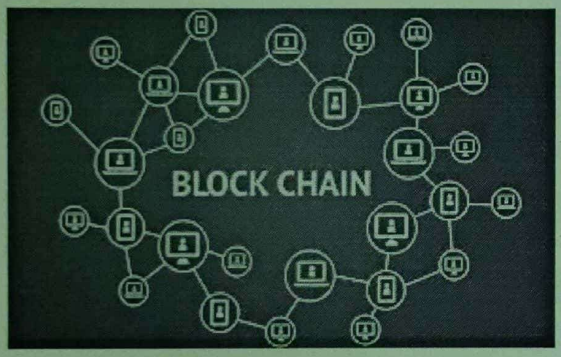
(AUTONOMOUS)

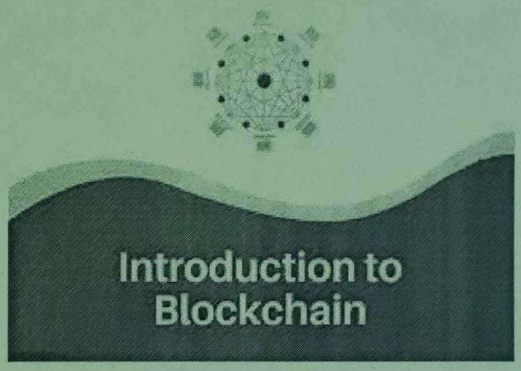
DEPARTMENT OF INFORMATION TECHNOLOGY

VALUE ADDED COURSE

17ITVC701 & INTRODUCTION TO BLOCKCHAIN

Block chain is a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. Each block in the chain contains a number of transactions, and every time a new transaction occurs on the Block chain, a record of that transaction is added to every participant's ledger.





COURSE CONTENT

- Introduction
- Basic Distributed Computing
- Basic Crypto primitives

INTENDED AUDIENCE:

- **IV Year of B.E/B.Tech Students**

Date: 27.06.17 to 01.07.17
Venue:Computer Lab

COURSE COORDINATORS

1. M.PUSHPALATHA, ASP/IT
2. R.JAYAVADIVEL, AP/IT

17ITVC701 INTRODUCTION BLOCKCHAIN

COURSE OBJECTIVES

To enable the students to

- To be able to explain the different components involved within Blockchain
- To understand what Blockchain is and why it is used
- To understand about basic Crypto primitives

Module 1: Introduction

- Need for Distributed Record Keeping
- Modeling faults and adversaries
- Byzantine Generals problem
- Consensus algorithms and their scalability problems
- Why Nakamoto Came up with Blockchain based cryptocurrency? Technologies Borrowed in Blockchain – hash pointers, consensus, byzantine fault-tolerant distributed computing, digital cash

Module 2: Basic Distributed Computing

Atomic Broadcast, Consensus, Byzantine Models of fault tolerance

Module 3: Basic Crypto primitives

Hash functions, Puzzle friendly Hash, Collison resistant hash, digital signatures, public key crypto, verifiable random functions, Zero-knowledge systems

COURSEOUTCOMES

At the end this course, students will be able to

- Analyze different components involved within Blockchain
- Analyze what Blockchain is and why it is used

- Implement basic Crypto primitives

TEXT BOOKS

1.Attack of the 50 Foot Blockchain: Bitcoin, Blockchain, Ethereum and Smart Contracts: Bitcoin, Blockchain, Ethereum & Smart Contracts Paperback – 24 July 2017

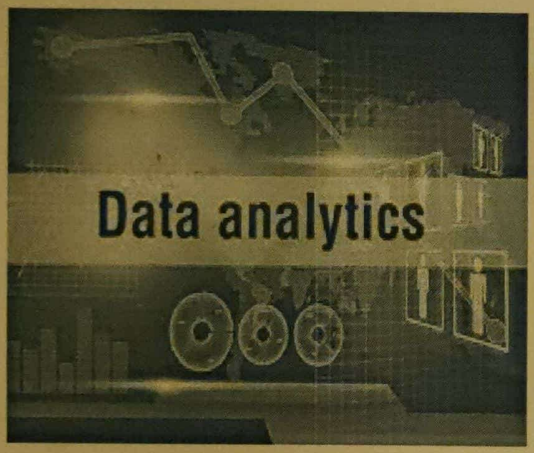
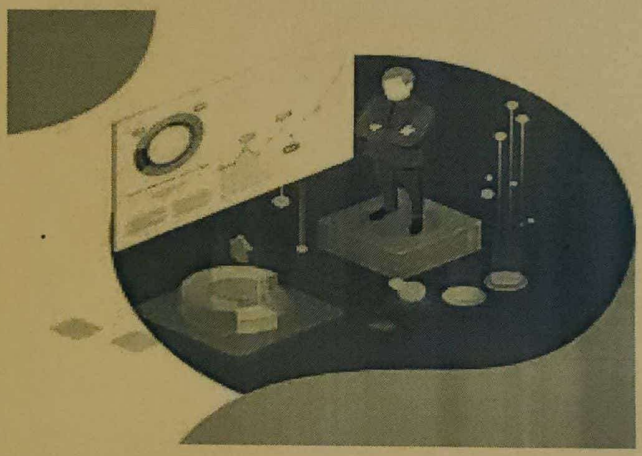
VALUE ADDED COURSE

17ITVC801 & DATA ANALYTICS

Analytics is the systematic computational analysis of data or statistics. It is used for the discovery, interpretation, and communication of meaningful patterns in data. It also entails applying data patterns towards effective decision-making.





COURSE CONTENT

- Introduction
- Various analytics tools
- R & R Studio Installation

INTENDED AUDIENCE:

- **IV Year of B.E/B.Tech Students**

Date: 27.11.17 to 01.12.17
Venue:Computer Lab.

COURSE COORDINATORS

1. S.SINDHUBALA, AP/IT
2. K.VIDHYA, AP/IT

17ITVC801 DATA ANALYTICS

COURSE OBJECTIVES

To enable the students to

- To understand about basic concept data Analytics
- Integrate R in a Hadoop platform
- write R codes to manipulate data

Module1 Introduction

- What are Data Analysis, Data Analytics and Data Science?
- Business Decisions
- Case study of Walmart

Module2 Various analytics tools

- Descriptive
- Predictive
- Web Analytics
- Google Analytics
- R and features
- Evolution of R?
- Big data Hadoop and R

Module3 Data Types

- R & R Studio Installation
- Scalar
- Vectors
- Matrix
- List
- Data frames
- Factors
- Handling date in R
- Conversion of data types

- Operators in R

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze basic concept data Analytics
- Demonstrate R in a Hadoop platform
- Implement R codes to manipulate data

TEXT BOOKS

1. R for data science : Import, Tidy, Transform, Visualize, And Model Data Paperback – 20 January 2017

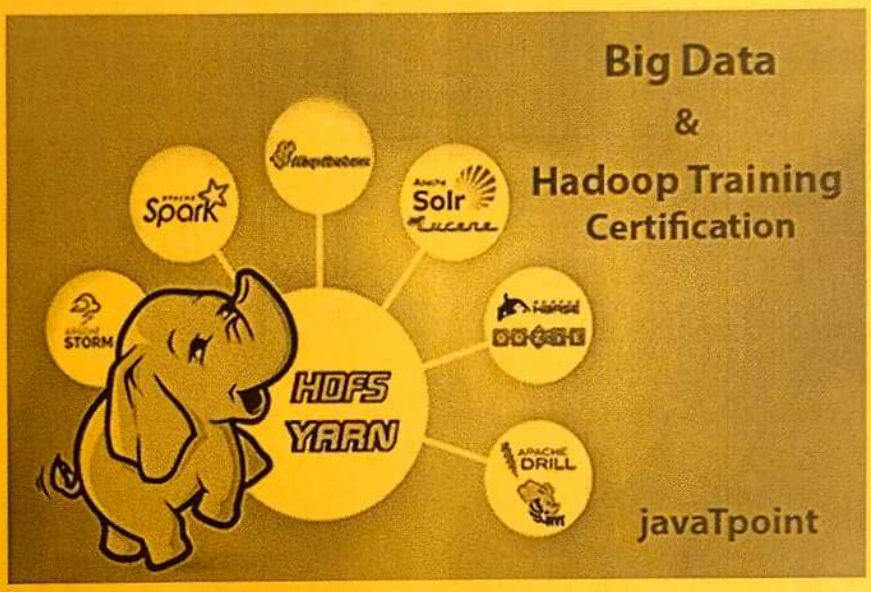
Value Added Course

17PCEVC101 - BIG DATA USING HADOOP

Hadoop is an open-source software framework for storing data and running applications on clusters of commodity hardware. It provides massive storage for any kind of data, enormous processing power and the ability to handle virtually limitless concurrent tasks or jobs.



INTENDED AUDIENCE

- I – Year M.E, M.Tech Students

Date: 21.08.2017 to 26.08.2017

Venue: Class Room No: Ground Floor Computer Lab

COURSE CO-ORDINATOR

J. Velumani, AP/CSE

17PCEVC101 BIG DATA USING HADOOP

COURSE OBJECTIVES

To enable the students to

- Understand the Big Data Platform and Provide an overview of Apache Hadoop (HDFS)
- Understand Map Reduce Jobs
- Provide hands on Hadoop Eco System

Module 1: INTRODUCTION TO BIG DATA AND HADOOP

- Introduction to Big Data,
- Big Data Analytics, History of Hadoop,
- Apache Hadoop - Analysing Data with Hadoop,
- Hadoop Streaming, Hadoop Echo System.
- HDFS(Hadoop Distributed File System): The Design of HDFS, HDFS Concepts
- Command Line Interface, Hadoop file system interfaces,
- Data flow, Data Ingest with Flume and Scoop and Hadoop archives,
- Hadoop I/O: Compression, Serialization, Avro and File-Based Data structures.

Module 2 Map Reduce

- Anatomy of a Map Reduce Job Run
- Failures, Job Scheduling
- Shuffle and Sort
- Task Execution
- Map Reduce Types and Formats
- Map Reduce Features.

Module 3 : Hadoop Eco System

- Pig
- Hive
- Hbase
- Big SQL

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

TEACHING LEARNING PROCESS

(Common for M .E. Communication Systems/VLSI Design)

COURSE OBJECTIVE

To enable the students to

- give an exposure to the teaching methods
- provide an exposure to Learning methods

Unit I: Teaching process **15**

Principles of Teaching -. Maxims of Teaching -Devices of Teaching -Curriculum development-curriculum Activities-. Educational Technology: Meaning Importance and Types-Micro- Teaching and Modification of Teacher Behavior-. Indian Model of Micro-Teaching

Unit II: Learning process **15**

Types of learning-Models of methods - Role of Mass Media in Education-. Evaluation -Class-Room Problems -Team methods -Programmed Learning-Simulated learning

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- understand the types teaching methods
- recognize the types of Learning methods

TEXT BOOK & MANUALS

Venue: M212

17PCOVC20 1/

17PVLVC20 1

ADVANCES IN JOURNAL WRITING

(Common for M .E. Communication Systems/VLSI Design)

COURSE OBJECTIVE

To enable the students to

- give an exposure to the scientific journal writing
- provide an exposure to journal. patent publication

Unit I: Scientific Writing **15**

Scientific Writing- Structure and components of Scientific Reports – types of Report – Technical Reports– Significance – Different steps in the preparation – Layout, structure and Language of typical reports Illustrations and tables – Use of word processing, spread sheet and database software. Plotting of graphs, drawing inferences from data Bibliography, Referencing and foot notes – Importance of Effective Communication.

Unit II: Preparing Research papers for journals **15**

Preparing Research papers for journals, Seminars and Conferences –Design of paper using TEMPLATE, Calculations of Impact factor of a journal, citation Index, ISBN & ISSN. Documentation and scientific writing Results and Conclusions, Preparation of manuscript for Publication of Research paper, Presenting a paper in scientific seminar. Ethical Issues –copy right – royalty – Intellectual Property rights and patent law – Track Related aspects of intellectual property Rights – Reproduction of published material – Plagiarism – Citation and Acknowledgement – Reproducibility and accountability.

TOTAL PERIODS **30**

COURSE OUTCOMES

Upon completion of this course, the students would have

- understand the concepts in scientific journal writing
- recognize the key issues in journal and patent publication.

TEXT BOOK & MANUALS

1. Wadehra, B.L.2000. Law relating to patents, trademarks, copyright designs and geographical indications. Universal Law Publishing.

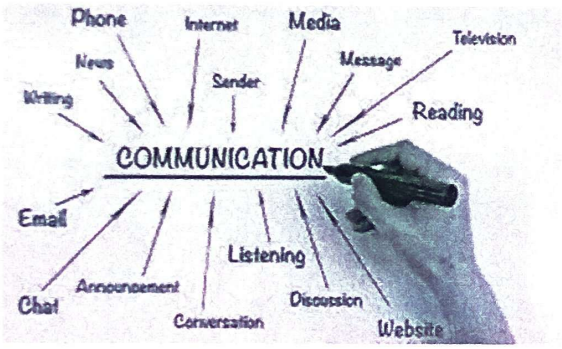
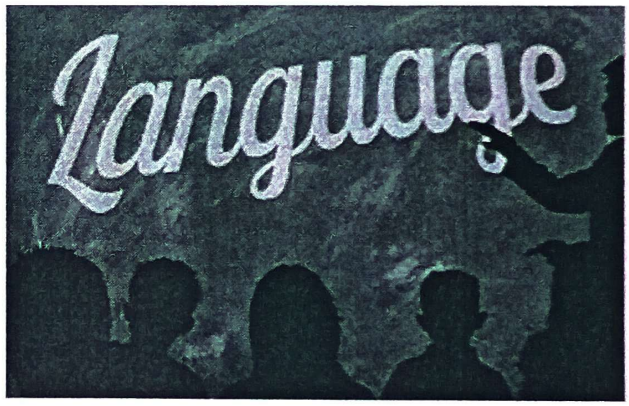
LANGUAGE AND COMMUNICATION IN TEACHING





Date: 17.07.2017 to 21.07.2017

Course Co-ordinator: Dr.T.Saravanan

Venue: M212

17PCOVC301 **LANGUAGE AND COMMUNICATION IN TEACHING**

/17PVLVC301 **PROFESSION**

(Common for M .E. Communication Systems/VLSI Design)

COURSE OBJECTIVE

To enable the students to

- understand the features of literature and use it for language teaching
- familiarize them with different approaches to using literature in language classes and the major criteria for selecting literary texts to use them in class

Unit-I- USING LITERATURE IN LANGUAGE CLASSES **15**

Definitions of literature - the reader and the text - literary competence and grammatical competence – distinct features of the language of literature – reasons for using literature as a resource in language class– preparing a lesson plan for different genres of literature

Unit II – APPROACHES TO USING LITERATURE IN LANGUAGE CLASSES **15**

Approaches: language-based approach, literature as content, literature for personal enrichment – stylistics for making meaningful interpretations of a literary text – literary meta-language to identify distinctive features in a literary text – criteria for selecting literary texts

TOTAL PERIODS **30**

COURSE OUTCOMES

Upon completion of this course, the students would have

- gain knowledge of Design language activities and lesson plans for developing both receptive and productive skills
- gain knowledge of Make use of their knowledge about various features of literature to create a favorable atmosphere for the acquisition of language skills

(AUTONOMOUS)

DEPARTMENT OF MECHANICAL ENGINEERING

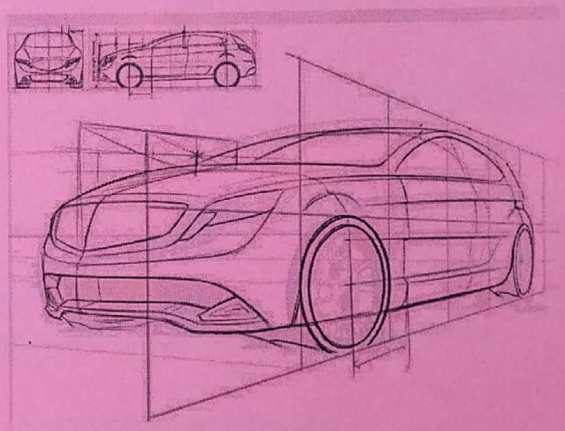
17PEDVC01- AUTOMOBILE DESIGN

ABOUT THE COURSE:

Automotive Design is a program which trains the students in designing, manufacturing, and maintenance of an automobile. It is a course which teaches a wide variety of topics to the students like the transportation sector, energy, and environmental concerns, application of fossil and alternative fuels and development of vehicles of the future. The main concern of the Automotive Design engineer is creating ideas and concepts via rough sketches and computer-aided design (CAD).

INTENDED AUDIENCE:

1. I and II year PG students those interested in automobile part design.
2. Those wants to know the design procedure of automobile elements.
3. Those wants to apply the concept of designing procedure in real time application.



DURATION OF THE COURSE:

Period: 18.09.2017 to 22.09.2017

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. apply design concept for automobile parts and elements.
2. apply the design procedure for designing the components.
3. design the various parts of the automobile element.

COURSE CO-ORDINATOR:

Mr.M.MAKESH, ASP/MECH

VENUE:

CAD/CAM LAB,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 12.09.2017.

Scanned by CamScanner

17PEDVC01 **AUTOMOBILE DESIGN**

COURSE OBJECTIVES

To enable the students to

- Know the basics design procedure of Automobile parts.
- Know various kind of commands and order used in particular software.
- Write the program to various operations.

1. **BODY SYSTEMS**

   Complete Body-In-White , Floor Pans ,Underbody Assemblies, Door/Hood/Deck Assemblies, Roof Panels

2. **CHASSIS SYSTEMS**

   Cross member Assemblies ,Radiator Supports ,Shock Towers, Engine Cradles, Front and Rear Sub-Frame Assemblies ,Front and Rear Suspension Modules

3. **EXTERIOR SYSTEMS**

   Front and Rear Fascias , Energy Management Systems

4. **VEHICLE ENHANCEMENT PACKAGES**

   Ground Effects, Roof Racks, Running Boards.

5. **INTERIOR SYSTEMS**

   Door module, power closure system, Driver control, Latching system

TOTAL PERIODS 30

COURSE OUTCOMES At the end this course, students will be able to

- Use the Pro-e software to design the various elements in the particular area.
- .Develop the various elements in the automobile structure and assemble to convert as single unit.
- Make different unit in the Automobile structure.

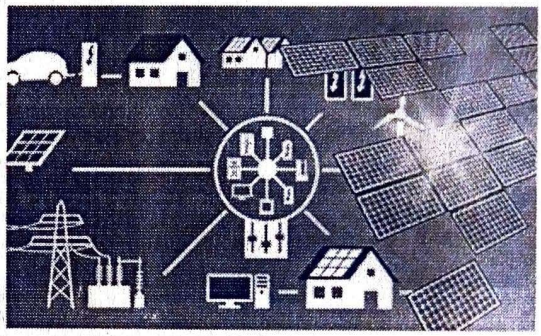
DEPARTMENT OF MECHANICAL ENGINEERING

17PEDVC02-DESIGN OF SOLAR ENERGY SYSTEM

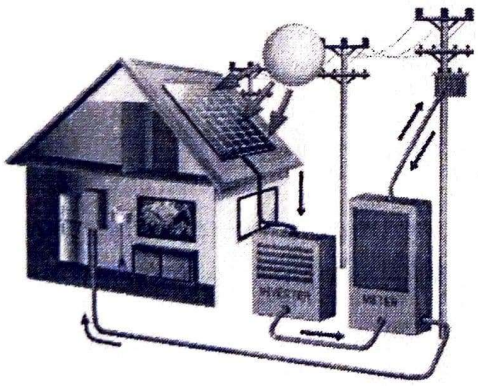
ABOUT THE COURSE:

Solar Energy System Design builds upon the introduction to PV systems from Solar Energy Basics course, which included basic system components and functions, as well as some basic system sizing using simplifying assumptions. Have a basic understanding of electrical power and energy, be able to calculate the energy needs of a site as well as energy production potential for a PV system at a given location under optimal conditions. Much of this course will focus on incorporating on the ground conditions into energy production considerations, and how to account for these conditions in system design and equipment selection.



INTENDED AUDIENCE:

- PG students those wants to know the basics of solar energy system.
- Those wants to design the solar energy system (panel, connection etc.,) in software.
- Those wants to know the various operating techniques in solar energy system design.



DURATION OF THE COURSE:

Period: 06.01.2018 & 08.01.2018 to 11.01.2018

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Develop understanding on the PV plant design and select suitable technologies.
2. Design and simulate a PV power plant using software tool.
3. Plan project implementation, operation and maintenance.
4. Carry out techno-economic-environmental performance evaluation of a solar PV power plant

COURSE CO-ORDINATOR:

Mr.M.MAKESH, ASP/MECH, PEC

VENUE:

CAD/CAM Lab,

Mechanical Department,

Paavai Engineering College.

Note: Interested students enroll their name to the course in charge on or before 02.01.2018.

17PEDVC02 DESIGN OF SOLAR ENERGY SYSTEM

COURSE OBJECTIVES

To enable the students to

- know the basic concept power consumption.
- know the need of solar power plant design.
- understand the concept designing the solar power Plant and the elements needed for designing.

1. **Types of Solar Power Plant**

   Grid Connected solar Power Plant, Grid interactive solar power plant, Net Metering Solar Power Plant, Off-Grid / Hybrid solar power , plant Schemes of solar power plant

2. **Selection of PV module technology**

   Introduction, Crystalline technology, Thin film technology,Bi-facial technology,Comparison between PV module technology,Comparison between solar power plant energy out put

3. **Selection of PV module (cells and BOM) and sizing**

   Types Crystalline module cells, Manufacturing process of PV cells, Comparison between mono crystalline Selection of PV cells, Selection of front and rear sheet, Selection of PV module glass

4. **Inverters Selection and Sizing (Grid Connection and Off Grid)**

   Factors affecting plant location, factors in planning layouts, principles of plant layout, use of scale models.

5. **Connection of PV Module(Series and Parallel Circuit**

   Series Circuits, Parallel Circuits, Combining Series & Parallel Circuits,PV module string connection Matching the PV Array ToThe Voltage Specifications of An Inverter, Matching the PVArray to the Inverter's Current Rating, Matching the PVArray to the Inverter's Power Rating Summary of Calculations for Matching Array and Inverter.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of solar power plant over other sources.
- Apply the concepts for making plant designing for an industry and domestic appliances.
- Represent the designing structure of the plant.

GRAPH THEORY

Course Duration: -08.08-2018-14.08.2018

Venue: PEC-Temple Tower -T206

Course Coordinator: Dr. A.Rathinam Prof/EEE

17PPEVC101 GRAPH THEORY

COURSE OBJECTIVES

To enable the students to

- familiarize the students in the field of distance in graphs and its applications.
- introduce types of digraphs and various matrix representations.
- expose the students to flows in networks.

UNIT I DISTANCE IN GRAPHS 10

The center of a graph - Distant vertices - Locating Numbers - Detour and Directed distance - Channel assignment

UNIT II DIRECTED GRAPHS 10

Types of digraphs - Digraphs and binary relations - Directed paths and connectivity - Euler digraphs - Trees withdirected edges - Fundamental circuits in digraphs - Matrices A,B and C of Digraph - Adjacency matrix of a Digraph.

UNIT III NETWORK FLOWS 10

Cut sets - Some properties of a cut set - All cut sets in a graph - Fundamental circuits and cuts sets - Connectivity andseparability Network flows - 1-Isomorphism - 2-Isomorphism.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Familiar with the concept of distance in graphs and its applications.
- Acquire the knowledge of types of digraphs and the matrix representations.
- Acquire the concept of Domination in graphs and applications.

MAINTANABILITY ENGINEERING

Course Duration:31.08.2018-07.09.2018

Venue: PEC-Temple Tower -T206

Course Coordinator: Dr.G.Balaji Prof/EEE

17PPEVC201 MAINTAINANABILITY ENGINEERING

COURSE OBJECTIVES

To enable the students to

- provide the students about the basic concept of maintainability engineering.
- provide knowledge on various maintenance models, maintenance policies and replacement model of various equipment.
- Inculcate the knowledge on logistics for the effective utilization of existing resources and facilities availability of spares parts.

UNIT I MAINTENANCE CONCEPT 10

Need for maintenance – Maintenance definition – Maintenance objectives – Challenges of Maintenance management – Tero technology – Scope of maintenance department – Maintenance costs.

UNIT II MAINTENANCE MODELS 10

Proactive/Reactive maintenance – Imperfect maintenance – Maintenance policies – PM versus break downmaintenance – Optimal PM schedule and product characteristics – Optimal Inspection frequency: Maximizing profit– Minimizing downtime – Replacement models.

UNIT III MAINTENANCE LOGISTICS 10

Human factors – Crew size decisions: Learning curves – Simulation – Maintenance resource requirements: Optimalsize of service facility – Optimal repair effort – Maintenance planning – Maintenance scheduling – Spare parts control – Capital spare.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- recall various terms and terminologies about the maintenance concept.
- understand and explain the various maintenance models to reduce downtime and maximize profit.
- illustrate the logistics meant for the execution of various services.

SAFETY IN TRANSPORT

Course Duration:03.12.2018-07.12.2018

Venue: PEC-Temple Tower -T207

Course Coordinator: Mr.C.Arul Kumar ASP/EEE

17PPEVC301 **SAFETY IN TRANSPORT**

COURSE OBJECTIVES

To enable the students to

- provide the students about the various activities/steps to be followed in safe handling the hazardous goods transportation from one location to another location.
- educate the reasons for the road accident and the roles and responsibilities of a safe Driver and the training needs of the driver.
- inculcate the culture of safe driving and fuel conservation along with knowing of basic traffic symbols followed throughout the highways.

UNIT I TRANSPORTATION OF HAZARDOUS GOODS **10**

Transport emergency card (TREM) – driver training-parking of tankers on the highways speed of the vehicle –warning symbols – design of the tanker lorries -static electricity, responsibilities of driver – inspection and maintenance of vehicles-check list- loading and decanting procedures – communication.

UNIT II ROAD TRANSPORT **10**

Introduction – factors for improving safety on roads – causes of accidents due to drivers and pedestrians-design,selection, operation and maintenance of motor trucks, preventive maintenance-check lists, motor vehicles act – motor vehicle insurance and surveys.

UNIT III DRIVER AND SAFETY **10**

Driver safety programme – selection of drivers – driver training-tachograph-driving test, driver's responsibility-accident reporting and investigation procedures-fleet accident frequency-safe driving incentives- slogans in driver cabin-motor vehicle transport workers act- driver relaxation and rest pauses – speed and fuel conservation – emergency planning and Hazmat codes.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- know various safety activities undertaken in transporting of hazardous goods.
- understand the various symbols which are specific to the road safety and could acquire the knowledge on the importance of Motor Vehicle Act and insurance.
- apply for the safe driving by proper training aids and the procedure involved in accident investigation and emergency planning.

Course Coordinator: Mr.R.Muthu Kumar AP/EEE

17PISVC161 CLOUD SECURITY

COURSE OBJECTIVES

To enable the students to:

- introduce the Cloud Computing Model and Cloud Infrastructure Security
- discuss the threats to data security and identity management
- explore the methods for security management and privacy in cloud Computing

UNIT I CLOUD COMPUTING FUNDAMENTALS, ARCHITECTURE AND RISK ISSUES 10

Fundamentals: Cloud computing – Essential characteristics – Architectural, Technical and Operational Influence architecture: Cloud delivery models (SaaS, PaaS, IaaS) – Cloud Service Providers (Amazon, Google, Azure, Salesforce) – Cloud deployment models (Public, Private, Community, Hybrid) – Benefits. Risk Issues: CIA – Privacy & Compliance Risks

UNIT II CLOUD COMPUTING SECURITY CHALLENGES AND ARCHITECTURE 10

Security Challenges: Security policy types – Virtualization Security Management – Virtual Threats – VM Security recommendations – VM specific security techniques Security Architecture: General Issues – Trusted cloud computing – Secure execution environments and communications – Identity management – Access control – Autonomic security

UNIT III INFRASTRUCTURE, DATA SECURITY AND IDENTITY MANAGEMENT 10

Infrastructure & Data Security: Network Level – Host Level – Application Level – Data security Mitigation – Provider data and its security Identity & Access Management (IAM): Trust Boundaries and IAM – IAM Challenges – IAM Architecture and Practice – IAM Standards and Protocols for Cloud Services – IAM Functions in the Cloud – Cloud Authorization Management – Cloud Service Provider IAM Practice

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to:

- Design a Cloud Computing Model and Cloud Secure Infrastructure
- Manage the threats to data security and do identity management in Cloud
- Deploy the appropriate methods for security management in cloud computing

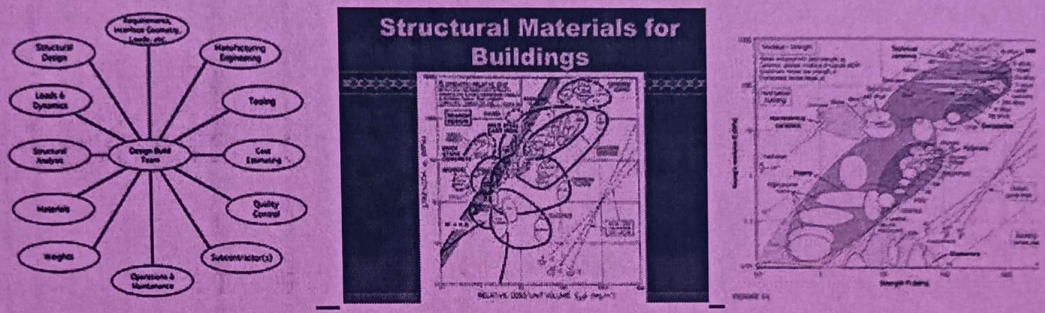
DEPARTMENT OF STRUCTURAL ENGINEERING

COURSE NAME :

❖ STRUCTURAL MATERIALS: SELECTION AND ECONOMICS



- ❖ This course will introduce us to the basics of Externalities Of Materials Selection, Material Price, Cost and Abundance, Properties, Limits and Ratio Analysis of Structural Materials and How structured materials are manufactured and processed.
- ❖ This course will also cover the topics such as Introduction to relationship between material cost, abundance and usage, Discussion of ratio analysis using among other examples steel, aluminum, and titanium, Discusses manufacturing and processing factors that effect material choice in various applications and Introduction to causes of material failures.

Date of conduction: 22.01.2018 to 26.01.2018

Course Incharge: Mrs.K.Sharmiladevi, AP/Civil

17 PSEVC101 STRUCTURAL MATERIALS: SELECTION AND ECONOMICS

COURSE OBJECTIVES

To enable the students to

- Understand the principles of structural materials selection through a practical curriculum rooted in the real world.

Introduction to externalities of materials selection- comprising social, political, economic, military, cultural, environmental and other effects. Introduction to relationship between material cost, abundance and usage. Factors influencing availability such as energy density and recyclability are also discussed. Introduction to the properties of materials that influence use in structural applications. Discussion of ratio analysis using among other examples steel, aluminum, and titanium. Discusses manufacturing and processing factors that effect material choice in various applications. Introduction to causes of material failures.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Apply the Limits and Ratio Analysis of Structural Materials

TEXT BOOKS

1. Iyengar, N. G. R., Structural Stability of columns and plates, Eastern West.

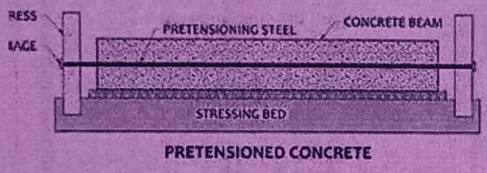
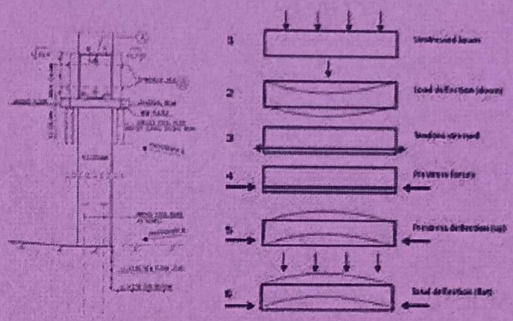
DEPARTMENT OF STRUCTURAL ENGINEERING

COURSE NAME :

❖ PRETENSIONED STRUCTURES



PRETENSIONED CONCRETE



- ❖ This course mainly discusses about the Early Attempts of Pre stressing, Development of Building Materials, Pre stressing Systems and Devices, Analysis for Shear etc.
- ❖ This course covers the topics such as This course integrates science and engineering principles to design reinforced concrete beams, one-way slabs, and columns. These include determination of strength, detailing of reinforcement, and service load considerations such as crack control and deflections and Pre tensioned Construction, Flexure Design and Estimation of Deflections.

Date of conduction: 21.05.2018 to 26.05.2018

Course Incharge: Ms.S.Gayathri, AP/Civil

17PSEVC201 **PRETENSIONED STRUCTURES**

COURSE OBJECTIVES

To enable the students to

- design prestressed concrete members and structural systems.

Design of pretensioned Hollow-Core slabs, Double-Tee and I-Beam members, and one-way post-tensioned floor slabs is exercised using current building code requirements to provide experiences in realistic design practice. The following subjects are used to solve engineering problems: calculus and differential equations; use of computer tools, data manipulation, statistical analysis, numerical calculation, and reinforced concrete design principles.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- design Pretensioned structures, Flexure Design ,Bond of pretensioned strand

TEXT BOOKS

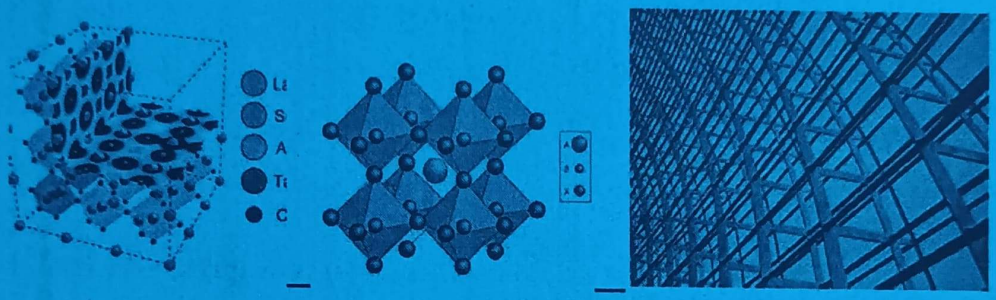
NAMAKKAL -637 018

DEPARTMENT OF STRUCTURAL ENGINEERING

COURSE NAME :

- **STRUCTURE OF MATERIALS**



- The course deals with the exploration of quasi-, plastic, and liquid crystals and the presence of these defects lead to diffusion in materials, exploration of dislocations in materials.
- This course covers the topics such as The structure of glasses and polymers, principles of x-ray diffraction that allow us to probe the structure of crystals, symmetry of a material influences its materials properties, properties of liquid crystals and how these materials are used in modern display technologies, and How defects impact numerous properties of materials—from the conductivity of semiconductors to the strength of structural materials.

Date of conduction: 17.07.2017 to 21.07.2017

Course Incharge: Mr.P.Vignesh, AP/Civil

17PSEVC301 **STRUCTURE OF MATERIALS**

COURSE OBJECTIVES

To enable the students to

- learn the properties of higher-order defects such as stacking faults and grain boundaries.

An Introduction to Materials Science -Structure of materials roadmap -States of matter and bonding – Descriptors -Descriptors: concept and function -Free volume -Pair distribution function –Glasses - Glass processing methods -Continuous network model -Network modifiers- Polymer- Random walk model - Chain-to-chain end distance -Order and disorder in polymers - An Introduction to the Crystalline State -Translational symmetry -The crystalline state in 2D -The crystalline state in 3D

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- identify defects impact numerous properties of materials—from the conductivity of semiconductors to the strength of structural materials

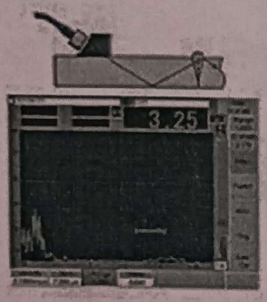
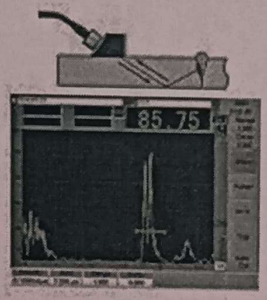
(AUTONOMOUS)

DEPARTMENT OF STRUCTURAL ENGINEERING

COURSE NAME :

- **WAVE – BASED NDT METHODS**





- Wave-based NDT methods allow for reliable and rapid evaluation of civil engineering infrastructure. These methods are particularly useful in long-range inspection, for example, in pipelines, where the wave-based NDT can provide data on hundreds of meters of piping in a matter of seconds.

Date of conduction: 06.01.2018 to 11.01.2018

Course Incharge:

- **Mr. K.Vivek , AP/Civil**

17 PSEVC401 **WAVE-BASED NDT METHODS**

COURSE OBJECTIVES

To enable the students to

- Learn the basic principles of various wave-based NDT techniques

Wave-based NDT methods- ultrasonic inspection, acoustic emission, resonant frequency testing, and electromechanical impedance testing- long-range inspection; for example, in pipelines, Piezoelectric effect, basic principles of various wave-based NDT methods, and their associated data acquisition.

Applications on wave-based NDT techniques, ultrasonic testing, acoustic emission to inspect the structural integrity of civil engineering structures, including highways, bridges, dams, and buildings.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Interpret the obtained data of wave-based NDT methods

DEPARTMENT OF MASTER OF COMPUTER APPLICATIONS

PROGRAMMING WITH PL/SQL

VALUE ADDED COURSE

ABOUT THE COURSE:

- **PL/SQL** is a completely portable, high-performance transaction-processing language.
- **PL/SQL** provides a built-in, interpreted and OS independent programming environment.
- **PL/SQL** can also directly be called from the command-line **SQL*Plus interface**.
- Direct call can also be made from external programming language calls to database.
- **PL/SQL's** general syntax is based on that of ADA and Pascal programming language.

COURSE OUTCOMES:

At the end this course, students will be able to

- analyse the features and syntax of PL/SQL
- analyze stored procedures and functions
- implement PL/SQL programming constructs and conditionally control code flow

DATE & VENUE :

27.11.2017 to 01.12.2017, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Mrs. T.Ramya, AP/MCA

17CAVC101 PROGRAMMING WITH PL/SQL

COURSE OBJECTIVES

To enable the students to

- describe the features and syntax of PL/SQL
- describe stored procedures and functions
- use PL/SQL programming constructs and conditionally control code flow

UNIT I PL/SQL

Introduction to PL/SQL-Declaring PL/SQL Identifiers-Interacting with the Oracle Server

UNIT II Control Structures

Writing Control Structures-Working with Composite Data Types- Explicit Cursors

UNIT III Exception Handling

Handling Exceptions with PL/SQL-Creating Stored Procedures- Stored Functions Creating Packages-Oracle Supplied Packages in Application Development-Dynamic SQL and Metadata

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- analyze the features and syntax of PL/SQL
- analyze stored procedures and functions
- implement PL/SQL programming constructs and conditionally control code flow

TEXT BOOKS

1. Oracle PL/SQL Programming, 6th Edition by Steven Feuerstein, Bill Pribyl

GRAPHICS DESIGNING

VALUE ADDED COURSE

ABOUT THE COURSE:

- **CorelDRAW** is a robust tool of graphic design that could be applied for any creative project's extensive range. Here, we will learn a lot about CorelDRAW.

- It is suited to the software's new owners; ideally this tutorial will cover most of the topics, such as understanding some necessary tools that we will use inside all the projects and setting our workspace.

COURSE OUTCOMES:

At the end this course, students will be able to

- describe about Drawing and Shaping objects
- explore the concepts of corelDRAW
- implement working with Bitmaps

DATE & VENUE :

27.11.2017 to 01.12.2017, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Miss.R.Sharmila, AP/MCA

Miss.V.Vaidehi, AP/MCA

17CAVC201 GRAPHICS DESIGNING

COURSE OBJECTIVES

To enable the students to

- learn about Drawing and Shaping objects
- understand about corelDRAW
- learn about working with Bitmaps

UNIT I Introduction to CorelDRAW

Introduction to CorelDRAW: Getting Started - Moving Around and Viewing Drawings - Basic Drawing Skills Selecting and Manipulating Objects - Drawing and Shaping Objects - Arranging Objects . Using Text : Working With Text - Working With Objects - Outlining and Filling Objects - Using Symbols and Clipart - Transforming Objects

UNIT II Adding Special Effects

Adding Special Effects - Creating Output - Exporting Drawings - Printing Customizing CorelDRAW Introduction - Customizing Options - Using Text and Color - Working With Color - Working With Paragraph Text - Special Text Effects - Layouts and Layers - Special Page Layouts - Arranging Objects - Using Layer

UNIT III Styles and Templates

Styles and Templates Using Styles and Templates - Advanced Effects - Special Interactive Effects - Custom Creation Tools - Working With Bitmaps - CorelTRACE and Corel R.A.V.E.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- describe about Drawing and Shaping objects
- explore the concepts of corelDRAW
- implement working with Bitmaps

TEXT BOOKS

DEPARTMENT OF MASTER OF COMPUTER APPLICATIONS

PROGRAMMING IN ANGULAR JS

VALUE ADDED COURSE

ABOUT THE COURSE:

- **AngularJS** is a very powerful JavaScript Framework. It is used in Single Page Application (SPA) projects. It extends HTML DOM with additional attributes and makes it more responsive to user actions. AngularJS is open source, completely free, and used by thousands of developers around the world. It is licensed under the Apache license version 2.0.

- **AngularJS** is an open-source web application framework. It was originally developed in 2009 by Misko Hevery and Adam Abrons. It is now maintained by Google

COURSE OUTCOMES:

At the end this course, students will be able to

- implement the HTML tags
- analyse the concept of CSS
- demonstrate about Javascript

DATE & VENUE :

17.07.2017 to 21.07.2017, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Mrs.M.Ranjani, AP/MCA

Mrs.D.Kokila, AP/MCA

17CAVC301 PROGRAMMIN IN ANGULAR JS

COURSE OBJECTIVES

To enable the students to

- understand about HTML tags
- learn about concept of CSS
- understand about Javascript

UNIT I Introduction to HTML

HTML Basics, Elements, Attributes, Styles - Forms, Form Elements, Input Element Types - Input Attributes, File Paths, Script tag - HTML &XHTML

UNIT II Introduction to CSS

CSS Introduction, Syntax, Selectors, Styling - Pseudo class, Pseudo Elements - CSS Tables, CSS Box Models - CSS Opacity, CSS Navigation Bar, Dropdowns

UNIT III Introduction to JavaScript

JavaScript Statements, Keywords, Functions - JavaScript Programs, Operators, Functions - Function Parameters, Function Return Types - Data Types, Primitive Types

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- implement the HTML tags
- analyze the concept of CSS
- demonstrate about Javascript

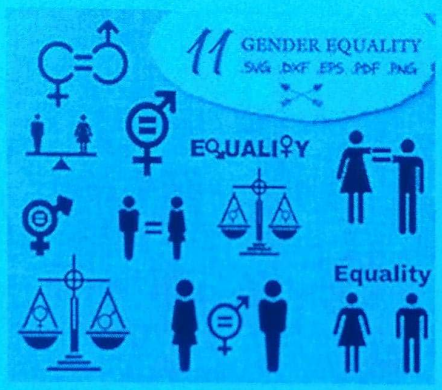
VALUE ADDED COURSE

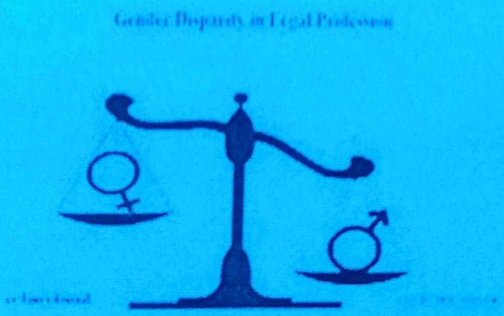
17GEVC101/201 GENDER EQUALITY AND LAW

About The Course:

This course examines the Constitution grants equality to women, ensures equality before the law, and prohibits discrimination against any citizen on the basis of religion, race caste, sex or place of birth. It also allows 'personal' laws, however, resulting in a dual system that allows forms of discrimination against girls and women.



INTENDED AUDIENCE:



- All the first year B.E., B.Tech Students

Date: 25-09-2017 to 29-09-2017

Venue:

1.T403 (Drawing Hall) 2.T218 (Drawing Hall) 3.M206 (Drawing Hall) 4.AB301 (Drawing Hall) 5.AB006 (Lecture Hall) 6. AB007 (Lecture Hall) 7. AB103 (Lecture Hall) 8. AB104 (Lecture Hall) 9. AB105 (Lecture Hall) 10. AB106 (Lecture Hall)

[*T –Temple Tower, M – Main Block , AB –Additional Block]

17GEVC101/201 **GENDER EQUALITY AND LAW**

COURSE OBJECTIVES

To enable the students to

- search, analyse, and work with legally relevant information by using the juridical, comparative and other specific methods
- learn how to work cooperatively in groups.
- achieve gender equality and sustainable development goals

MODULE 1: Gender theory and law

Approaches to gender and law, Gender theory, Conflict, integrationist and hermeneutic approaches, Feminist theory, Human rights of women and legal theory, Feminist jurisprudence, Legal and gender expertise

MODULE 2: Gender equality and human rights

Gender and human rights theory, History of human rights movements, Suffrage movements, International treaties and prohibition of gender-based discrimination, EU human rights law and gender

MODULE 3: Gender equality and labour law

Current challenges for Gender equality, Anti-gender movements, Biopolitics and legal instruments of body control. Sexual violence in conflict. Challenges to human rights of women, mainstreaming and neoliberal jurisprudence, women and austerity. How to achieve gender equality: gender and sustainable development goals 2015-2030.

TOTAL PERIODS 30

COURSE OUTCOMES

Students must gain knowledge on

- To work with information (search, evaluate, use information, necessary for fulfilment of scientific and professional tasks, from various sources, including application of the systematic approach)
- To carry out professional activities in the international environment
- gender equality and sustainable development goals

10. G.Sankar , AP/Chemitry

11.D.Rajamanickam, AP/ Chemitry

17GEVC101/201 **INDIAN CONSTITUTION AND ELECTION COMMISION**

COURSE OBJECTIVES

To enable the students to

- understand the most diversified legal document of India and philosophy behind it.
- thinking towards basic understanding of the Organs of Governance and its implications for engineers.
- learn about the role and function of election commission

MODULE 1 : INTRODUCTION ABOUT INDIAN CONSTITUTION

Meaning of the constitution law and constitutionalism, Historical Background of the Constituent Assembly, Government of India Act of 1935 and Indian Independence Act of 1947,Enforcement of the Constitution, Indian Constitution and its Salient Features, The Preamble of the Constitution,

MODULE 2: ORGANS OF GOVERNANCE

Organs of Governance: Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions

MODULE 3 : ELECTION COMMISSION

Election Commission: Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners. State Election Commission: Role and Functioning. Institute and Bodies for the welfare of SC/ST/OBC and women.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify and explore the basic features and modalities about Indian constitution
- Understand the various organs of Indian governance.
- Gain knowledge on election commission of India

TEXT BOOKS

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
NON DESTRUCTIVE TESTING

ABOUT THE COURSE:

This course plays a vital role in industries such as aerospace, pipelines, bridges, refineries and oil platforms as well as power stations as it can help prevent failures that could have an adverse impact on safety, reliability, and the environment.

Who Can Join?

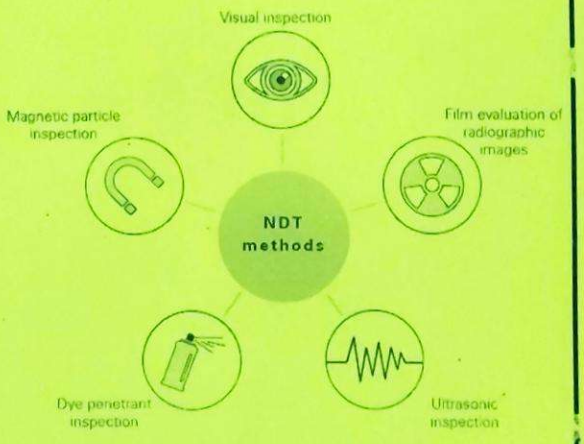
- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Material testing technician.

Need for NDT?

- A career in NDT is extremely dynamic
- It is the most popular course for Engineers.
- You have more job choices available to you.

Course Content:

- LIQUID PENETRANT TESTING
- MAGNETIC PARTICLE TESTING
- Introduction to
  - ULTRASONIC TESTING
  - RADIOGRAPHIC TESTING



Date: 27.06.2016 to 01.07.2016

Venue:

Aircraft Structures Lab,
Aeronautical Engineering Block
Paavai Engineering College

Course Incharge

- Mr. D.RAJ KUMAR AP/Aero,PEC

16AEVC301 **NON DESTRUCTIVE TESTING**

COURSE OBJECTIVES

To enable the students

- gain practical knowledge on conventional NDT techniques
- develop a strong hands on experience for inspecting and evaluating components in accordance with industry specifications.

1. LIQUID PENETRANT TESTING

Introduction

Equipment &Materials

Inspection Methods

Interpretation

Discontinuities

2. MAGNETIC PARTICLE TESTING

Introduction

Magnetization Methods

Magnetization Equipment

Interpretation

Discontinuities

3. ULTRASONIC TESTING

Introduction

Ultrasonic Principle

Equipment

Reference Block

Testing Methods

Inspection & Evaluation

4. RADIOGRAPHIC TESTING

Principles

Techniques

Applications

Limitations

Standards and Specifications related to Radiography

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of the course students will be able to

TEXT BOOK & MANUALS

- Baldev Raj, T.Jayakumar, M.Thavasimuthu Practical Non-Destructive Testing, Narosa Publishing House, 2014.
- Ravi Prakash, Non-Destructive Testing Techniques, 1st revised edition, New Age International Publishers, 2010

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF AERONAUTICAL ENGINEERING

VALUE ADDED COURSE
ON
COMPUTER AIDED DESIGN CATIA-BASIC

ABOUT THE COURSE:

CATIA is an acronym for Computer Aided Three-dimensional Interactive Application. It is one of the leading 3D software used by organizations in multiple industries ranging from aerospace, automobile to consumer products..

Who Can Join?

- II, III, IV Year of B.E,B.Tech– students
- Those who want to become a Software Technician.
- The powerful professional aspirants.

Why CATIA?

- The CATIA suite is a powerful design tool that is growing in popularity due to the powerful functionality it offers
- It is the most popular solid modeller,
- You have more job choices available to you internationally.

Course Content:

- Introduction to
  - CATIA
  - SKETCHER WORKBENCH

Date: 12.12.2016 to 16.12.2016

Venue:

Software lab,

Core Engineering Block

Paavai Engineering college

Course Incharge

- Ms. MALARVIZHI AP/Aero,PEC

16AEVC401 COMPUTER AIDED DESIGN CATIA-BASIC

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling
- develop the analysis process of mechanical components.
-

INTRODUCTION TO CATIA

Introduction to CATIA-History of CATIA-CATIA modeling process, Parametric design concept, feature based design etc-CATIA Features-SKETCHER-Creating a new part.

SKETCHER WORKBENCH

Basic sketch, Sketch in task environment, Selection tools-Profile, Predefined shapes, Circles, Spline, Conics, Line, Points-Operations, Corner, Chamfer, Relimitation tools-Projections, Transformations-Constraints, Sketch tools, Grid, Snap on grid, Construction-Geometrical constraints, Dimensional constraints., Sketch analysis-Visualization tools, View tool bar, Workbench

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

TEXT BOOK & MANUALS

- Jonathan M. Weaver, Nader G. Zamani CATIA V5 Tutorials Mechanism Design & Animation Release 20

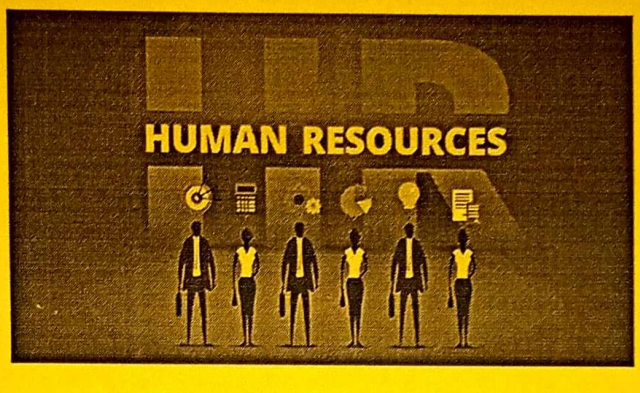
16AIVC401 HUMAN RESOURCE MANAGEMENT AND DEVELOPMENT



.Course content:

- Human resource management, the changing the environment of HRM, career planning, process of job analysis.
- Human resource acquisition, process test of selection, problems of placement, process of training.
- Performance appraisal, classification of fringe benefits, management of grievances.

Date: 12.12.2016 – 16.12.2016
Venue:T406

COURSE INCHARGE

1. Dr.R.Jagannathan, HOD/AGRI
2. P.Athira, AP/AGRI

16AIVC401 IIUMAN RESOURCE MANAGEMENT AND DEVELOPMENT

COURSE OBJECTIVES

To enable the students to

- To achieve the organizational goals by proper utilization of human resources.
- To develop and maintain healthy working relationships among all the employees and to adopt sound, desirable organization structure.
- To integrate individual and group goals within an organization.

UNIT I

Human Resources Management: Definition, Nature, Scope and objectives of HRM, Difference between HRM and PM, Importance of HRM, The changing environment of HRM, The changing role of HRM. HRP / Manpower Planning: Definition, Need HRP, Career Planning and Succession Planning.Job Analysis:Job Terminology, Process of Job Analysis, Job Description, Job Specification.

UNIT II

Human Resource Acquisition: Meaning, Sources, and Process of Recruitment, Meaning, Process Test of Selection, Meaning, Objectives and Types of Interview, Meaning, Purpose, Process and Problems of Induction, Meaning and Problems of Placement.Training and Development: Meaning, Benefits and Process of Training, Methods and Problems of Training, Career Development, Meaning and Techniques of Executive Development.

UNIT III

Performance Appraisal: Nature, Objectives and Methods of Performance Appraisal, Meaning and Types of Promotion, Meaning and Types of Transfers, Meaning of Demotion, Separation, Suspension, Redundancy, Retrenchment, Lay Off, (Meaning only)Wage and Salary Administration: Nature and Purpose, Compensation, Reward, Wage levels and Wage Structures, Minimum, Fair and Living Wage, Basic Kinds of Wage Plan, Ingredients of a Good Wage Plan, Types of Wages, Wage Differentials, Executive Compensation.Rewards and Incentives: Meaning and Features, Types of Rewards, Wage Incentives – Meaning and ObjectivesEmployee Benefits and Service: Terminology and Meaning, Special Features of Fringe Benefits, Objectives & Classification of Fringe BenefitManagement of Grievances: Meaning, Causes and Needs of Grievance Procedure.Industrial Relations: Definition, Objectives and Participants in Industrial RelationsResolving .

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- To ensure seamless experience for the staff and other people associated to management and organisational goals
- To handling employees and acknowledging their requirements for maintaining a positive work culture.

TEXT BOOKS

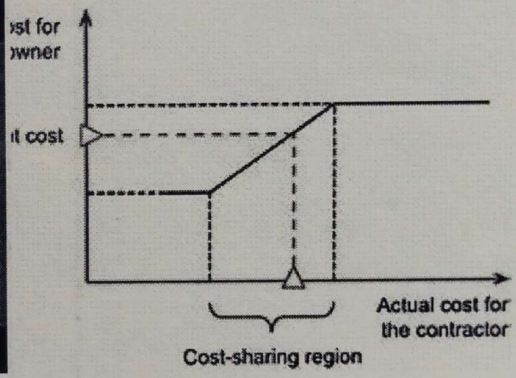
Value Added Course

16CEVC301 - BUILDING COST ESTIMATION SIMPLIFIED



- Through this course, there will be an simplification of the basics of how the cost of building works are estimated and the calculation of the cost of construction using rate and quantities are covered.
- Some of the topics which will be covered would be estimation, analysis of rates and bills of building works. The course covers topics which are prescribed in the syllabus for undergraduate students pursuing B-Tech in Civil Engineering and Bachelor of Architecture in Indian universities.

Date:27.6.2016 to 1.7.2016

Venue : T229

Course Incharge:

1.Mr.P.Kalaimuthu HOD/Civil

2.Mr..N.Moorthi AP/Civil

3.Ms.B.Karthiga AP/Civil

16CEVC301 **BUILDING COST ESTIMATION SIMPLIFIED**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on building Estimation
- understand the concepts of preparation of BOQ
- acquire knowledge on the principles of building services

Module I

Introduction to building cost estimation- Measurement procedures - Mensuration – Specifications- Rates – Labour, material, machine.

Module II

Finding quantities from construction drawing –Excavation - Ground work and Foundation - Superstructure- Walls, partitions, floors, roofs- Internal finishes - Doors and windows - Staircases

Module III

General approach to measurements of building services - External work- Bill of quantities – Abstract and BOQ

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply knowledge on calculation of building cost
- prepare BOQ and Abstract
- apply the principles on building services

TEXT BOOKS

1. Estimation and Costing book by M. Chakraborti ,M. Chakraborti publications, 2011

REFERENCES

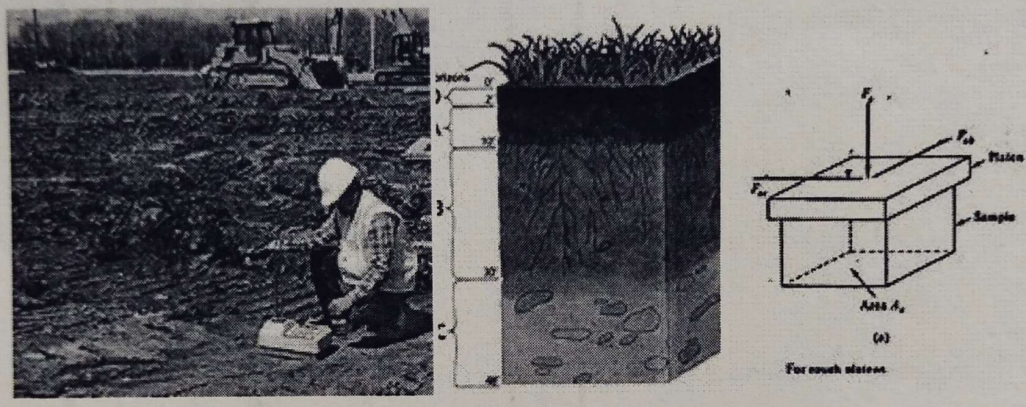
Value Added Course

16CEVC401 - ADVANCED SOIL MECHANICS



- This course intends to bridge the basic soil mechanics concepts with the advanced topics related to stresses and soil strength, it will help to reinforce the understanding gained during the undergraduate learning.
- The course will help to appreciate the basic concepts of continuum mechanics, which is a pre-requisite for research in geo mechanics, the course is introductory in nature when it deals with the advanced topics. It will help to reinforce the understanding gained in the stress-strain response and strength behaviour of soils

Date: 12.12.206 to 16.12.2016

Venue : Soil Laboratory

Course Incharge:

1.Dr.S.Sukumar Dean/Civil

2.Ms.S.Sharmiladevi AP/Civil

3.Mr.A.Santhoshkumar AP/Civil

16CEVC401 **ADVANCED SOIL MECHANICS**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on soil structure and properties
- understand the concepts of stress , strain mechanism of soil
- acquire knowledge on finding stress path in undrained & drained cases

Module I

Introduction to continuum mechanics - Important constitutive relationship -3D to 2D idealization - Mathematical formulation of plane stress, plane strain -Mathematical formulation of axisymmetric conditions

Module II

Basics of shear strength -Stress representation - Shear strength granular soil-Shear strength cohesive soil

Module III

Stress path-triaxial test-drained -Stress path-triaxial test-undrained- Stress path-additional undrained case - Stress path-field cases

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply gained knowledge on finding properties of soil
- calculate the stress & strain path for both drained & undrained cases
- apply acquired knowledge to find stress path in undrained & drained cases

TEXT BOOKS

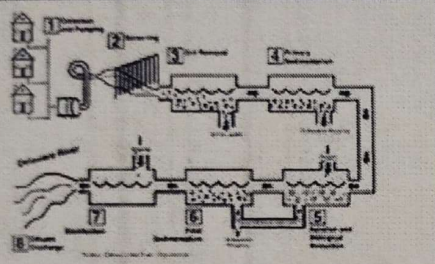
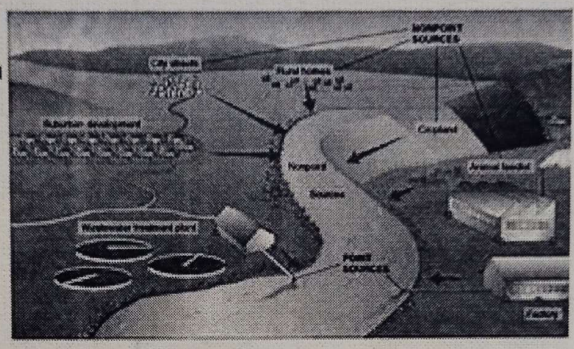
16CEVC501 - WATER POLLUTANTS AND ITS TREATMENT

Sewage Treatment Process





- This course emphasizes on source of the water pollutants and its various methods of its treatment and recycling.
- Waste water part of syllabus is covered from the head works till the final Disinfection and Disinfectant removal, their design is also considered in detail. Water treatment portion covers the nitty gritty of treatment and the relevant aspects post treatment like residual removal. This course will allow the student to clear basics and concepts for further in depth learning.

Date: 27.6.2016 to 1.7.2016

Venue : T225

Course Incharge:

1.Mrs.P.Kalaivani AP/Civil

2.Mr.S.Balamurugan AP/Civil

3.Ms.S.Gayathri AP/Civil

16CEVC501 **WATER POLLUTANTS AND ITS TREATMENT**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on pollutants in air, land & water
- understand the concepts of water softening & distribution
- learn the design procedure

Module I

Pollutants and their Effects - Air pollution –Land Pollution - Water Pollution - Water Quality-Criteria & Analysis - Water Requirements - Sources and Collection of Water - Overview of Purification and Pre-Treatment - Theory and Design of Sedimentation

Module II

Theory and Design of Filtration - Theory and Design of Disinfection - Water Softening and Specific Treatments- Storage and Distribution Reservoirs

Module III

Hydraulic Considerations and Design - Distribution Network-Analysis and Design- Pumps and Pumping Requirements, Valves and Appurtenances

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply field procedure on testing pollutants
- calculate the water distribution
- manipulate design of distribution network

TEXT BOOKS

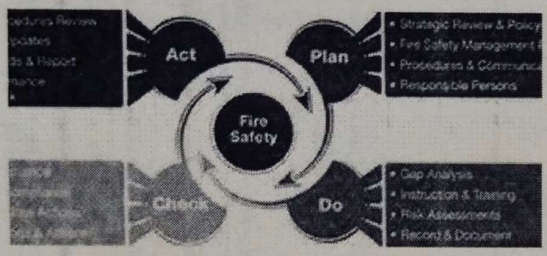
16CEVC601 - FIRE PROTECTION AND SERVICE MANAGEMENT



- The objectives of this course is to expose the students to the concepts functional design of building for thermal aspects and energy efficiency; especially in tropical climates and is to make the student capable of performing fenestration design for natural ventilation and day lighting & design of space for external and internal noise control.
- The course also covers the topics a Fire Protection: Process of combustion in fire, Concepts of fire resistant and severity, Effect of fire on materials and Water Supply, Hydraulic design, Storage Distribution, Component of cold & hot water supply system, Effect of design on maintenance, Diagnosis, appraisal, structural defects & various methods of repair.

Date: 12.12.2016 to 16.12.2016

Venue : T229

Course Incharge:

1. Mr.V.Sadeeshkumar AP/Civil
2. Mr.B.Thiyagarajan AP/Civil
3. Mr.D.Munusamy AP/Civil

16CEVC601 FIRE PROTECTION AND SERVICE MAINTENANCE

COURSE OBJECTIVES

To enable the students to

- gain knowledge on fire protection & service maintenance in building
- understand the concepts lift design , Ad-hoc maintenance
- acquire knowledge on periodic maintenance

Module I

Basic concepts of fire protection – Fire resistance- Introduction process of combustion- Design of fire resistance steel and concrete – Urban Planning

Module II

Introduction to lift design – Design of lift system – Introduction to system & flow system – life cycle cost and basics of building maintenance

Module III

Planning for Building Maintenance – Building inspection & Ad-hoc maintenance- Diagnosis of building by visual survey

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply knowledge on maintenance of building fire protection
- prepare lift design & know Ad-hoc maintenance service
- perform periodic maintenance in building

TEXT BOOKS

1. Fire Protection Handbook (NATIONAL FIRE PROTECTION ASSOCIATION//FIRE PROTECTION HANDBOOK)

REFERENCES

1. Bureau of Indian Standards, " HAND BOOK OF FUNCTIONAL REQUIREMENTS OF BUILDINGS, (SP-41 & SP- 32)", BIS 1987 and 1989.

1.Mr.M.Subramani AP/Civil

2.Mr.A.Jayapal AP/Civil

3.Mr.A.Arun AP/Civil

16CEVC701 ENVIRONMENTAL REMEDIATION OF CONTAMINATED SITES

COURSE OBJECTIVES

To enable the students to

- gain knowledge on laws , regulations & remediation
- understand the risk assessment & remedial options in contaminated sites
- learn the remedial options available

Module I

Introduction - Laws, Regulations and Remediation - Legal Concepts - Types of Law – Regulations – Federal - Laws/Regulations – History – Objectives - Remediation Process - Definition of hazardous waste - Waste Classification - Corrective Action

Module II

Risk Assessment - Steps in Human Health Risk Assessment - Data Collection and Evaluation - Exposure Assessment - Toxicity Assessment - Risk Characterization - Risk Management - Risk Communication - Ecological Risk Assessment

Module III

Remedial Options - Plume Containment - extraction wells- extraction trenches - injection wells/trenches - wells/barriers- Permeable Reactive Barriers

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply gained knowledge on environmental remediation of contaminated sites
- find reclamation solution for contaminated sites
- apply the remedial options to improve contaminated sites

16CEVC801 BITUMEN FOR BETTER ROADS AND INNOVATIVE APPLICATIONS

COURSE OBJECTIVES

To enable the students to

- gain knowledge on type and properties of bitumen for good roads
- understand the quality , health & safety aspects of bitumen
- acquire knowledge on researches in bitumen

Module I

Bitumen market, generalities, the manufacture of bitumen, transport, uses of bitumen, main developments and alternatives

Module II

Constitution, structure and characterization of bitumen - specifications-rheology - Modifications of bitumen and applications (roads, roofing)

Module III

Health, Safety, Environment & Quality concerns regarding bitumen, and examples of research & innovation actions

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply the gained knowledge on application of bitumen
- manipulate quantity of bitumen for roads stretch
- apply new bituminous materials

16CSVC301 - PROGRAMMING WITH PL/SQL

PL/SQL is a procedural language designed specifically to embrace SQL statements within its syntax. PL/SQL program units are compiled by the Oracle Database server and stored inside the database. And at run-time, both PL/SQL and SQL run within the same server process, bringing optimal efficiency.

It lets you use all SQL data manipulation, cursor control, and transaction control statements, and all SQL functions, operators, and pseudocolumns. PL/SQL fully supports SQL data types. You need not convert between PL/SQL and SQL data types.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to store and fetch the data efficiently with procedural language by using PL/SQL.

Date: 27.06.2016 - 01.07.2016

Venue: Class Room No: 319

COURSE CO-ORDINATOR

M.Revathi, AP/CSE
K.S.Aparna, AP/CSE

16CSVC301 PROGRAMMING WITH PL/SQL

COURSE OBJECTIVES

To enable the students to

- Describe the features and syntax of PL/SQL
- Describe stored procedures and functions
- Use PL/SQL programming constructs and conditionally control code flow (loops, Control structures, and explicit cursors)

Unit 1

Introduction to PL/SQL-Declaring PL/SQL Identifiers-Interacting with the Oracle Server

Unit 2

Writing Control Structures-Working with Composite Data Types- Explicit Cursors

Unit 3

Handling Exceptions with PL/SQL-Creating Stored Procedures- Stored Functions

Creating Packages-Oracle Supplied Packages in Application Development-Dynamic SQL and Metadata

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze the features and syntax of PL/SQL
- Analyze stored procedures and functions
- Implement PL/SQL programming constructs and conditionally control code flow (loops, Control structures, and explicit cursors)

TEXT BOOKS

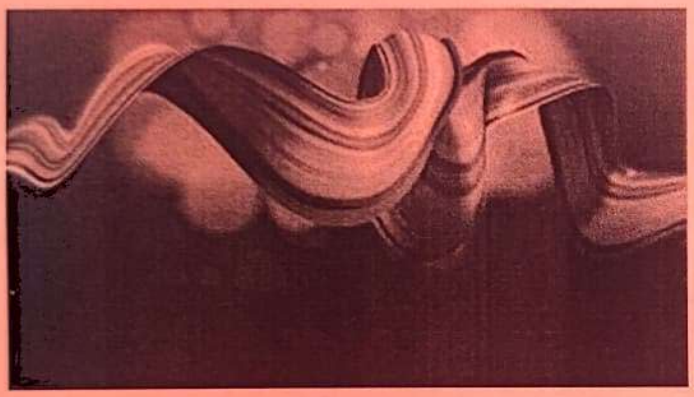
16CSVC401 - GRAPHIC DESIGNING

Graphic design is a craft where professionals create visual content to communicate messages. By applying visual hierarchy and page layout techniques, designers use typography and pictures to meet users' specific needs and focus on the logic of displaying elements in interactive designs, to optimize the user experience.



The goal of graphic design is to create visually appealing products that convey certain messages or information. Graphic Designers focus on branding, typography, layout, and the overall principles of design composition.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to communicate messages through visual content, by applying visual hierarchy and page layout techniques

Date: 12.12.2016 - 16.12.2016

Venue: Class Room No: 319

COURSE CO-ORDINATOR

J.Velumani, ASP/CSE
S.Rajesh, AP/CSE

16CSVC401 GRAPHIC DESIGNING

COURSE OBJECTIVES

To enable the students to

- To learn about Drawing and Shaping objects
- To understand about corelDRAW
- To learn about working with Bitmaps

Unit I

Introduction to CorelDRAW: Getting Started - Moving Around and Viewing Drawings - Basic Drawing Skills Selecting and Manipulating Objects - Drawing and Shaping Objects - Arranging Objects . **Using Text** : Working With Text - Working With Objects - Outlining and Filling Objects - Using Symbols and Clipart - Transforming Objects

Unit II

Adding Special Effects Special Effects - Creating Output - Exporting Drawings - Printing Customizing CorelDRAW Introduction - Customizing Options - Using Text and Color - Working With Color - Working With Paragraph Text - Special Text Effects - Layouts and Layers - Special Page Layouts - Arranging Objects - Using Layer

Unit III

Styles and Templates Using Styles and Templates - Advanced Effects - Special Interactive Effects - Custom Creation Tools - Working With Bitmaps - CorelTRACE and Corel R.A.V.E.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Describe about Drawing and Shaping objects
- Explore the concepts of corelDRAW
- Implement working with Bitmaps

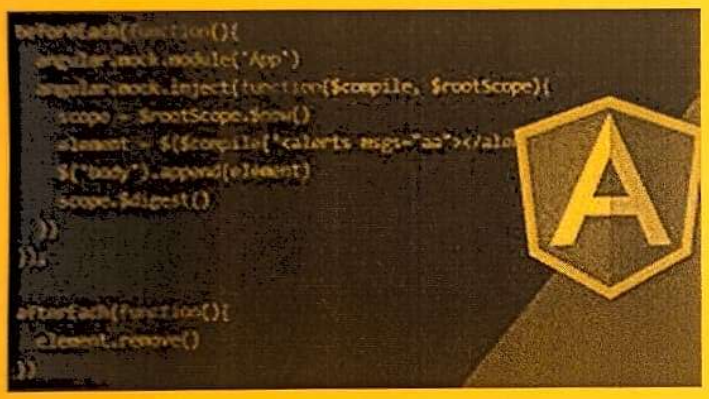
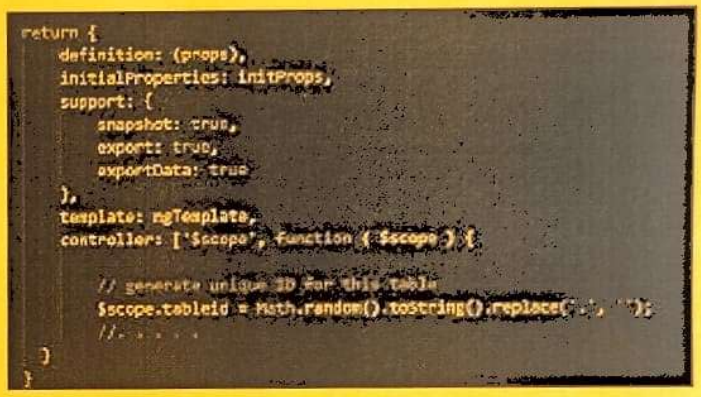
16CSVC501 - ANGULAR J S

AngularJS is a structural framework for dynamic web apps. With AngularJS, designers can use HTML as the template language and it allows for the extension of HTML's syntax to convey the application's components effortlessly. Angular makes much of the code you would otherwise have to write completely redundant.





Angular helps build interactive and dynamic single page applications (SPAs) with its compelling features including templating, two-way binding, modularization, RESTful API handling, dependency injection, and AJAX handling.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to apply this framework to thier websits and web applications for API handling and dependency injection

Date: 27.06.2016 - 01.07.2016

Venue: Class Room No: Ground Floor CSE Lab

COURSE CO-ORDINATOR

N. Magendiran, ASP/CSE
J.Nashreen Begum, ASP/CSE

16CSVC501 **ANGULAR J S**

COURSE OBJECTIVES

To enable the students to

- To understand about HTML tags.
- To learn about concept of CSS
- To understand about Javascript

Module 1: Introduction to HTML

- HTML Basics, Elements, Attributes, Styles
- Forms, Form Elements, Input Element Types
- Input Attributes, File Paths, Script tag
- HTML &XHTML

Module 2: Introduction to CSS

- CSS Introduction, Syntax, Selectors, Styling
- Pseudo class, Pseudo Elements
- CSS Tables, CSS Box Models
- CSS Opacity, CSS Navigation Bar, Dropdowns

Module 3: Introduction to JavaScript

- JavaScript Statements, Keywords, Functions
- JavaScript Programs, Operators, Functions
- Function Parameters, Function Return Types
- Data Types, Primitive Types

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Implement the HTML tags.
- Analyze the concept of CSS
- Demonstrate about Javascript

16CSVC601 ARDUINO PROGRAMMING

COURSE OBJECTIVES

To enable the students to

- To understand about Embedded system.
- To learn about Concept of digital and analog ports
- To Understand about basic concepts of arduino

Module1 Introduction

- Introduction to embedded system
- Understanding Embedded System
- Overview of basic electronics and digital electronics.
- Microcontroller vs. Microprocessor
- Common features of Microcontroller.
- Comparison between the two
- Different types of microcontrollers.

Module2 Getting Started with Arduino

- Introduction to Arduino
- Pin configuration and architecture.
- Device and platform features.
- Concept of digital and analog ports.
- Familiarizing with Arduino Interfacing Board
- Introduction to Embedded C and Arduino platform

Module3 Review of Basic Concepts

- Arduino data types
- Variables and constants
- Operators
- Control Statements
- Arrays
- Functions

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Design and implement Embedded system.
- Implement the Concept of digital and analog ports
- Analyze about basic concepts of arduino

Value Added Course

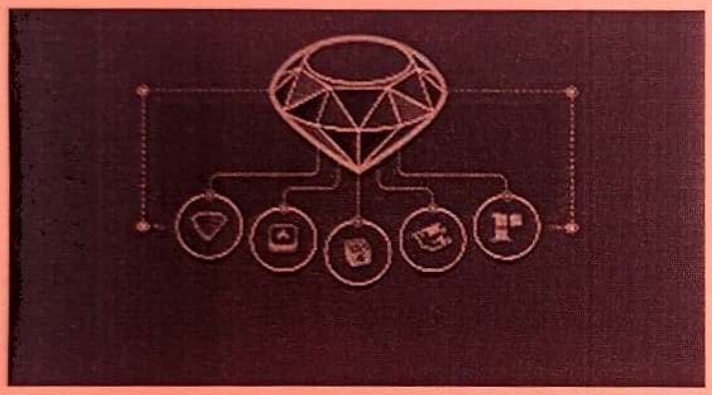
16CSVC801 - RUBY

Ruby is most used for building web applications. However, it is a general-purpose language similar to Python, so it has many other applications like data analysis, prototyping, and proof of concepts. Probably the most obvious implementation of Ruby is Rails web, the development framework built with Ruby.



Ruby compiles the abstract syntax tree into lower-level byte code. This byte code is then run by the Ruby virtual machine. ... The ruby virtual machine (YARV) then steps through these instructions and executes them

INTENDED AUDIENCE

- IV Year of B.E, B.Tech - Students
- Students able to work with data analysis, prototyping, and mostly with the web applications

Date: 12.12.2016 - 16.12.2016

Date: 1.2.2017 to 7.2.2017

COURSE INCHARGE

1. Mr.S.Kumarganesh ASP/ECE

16ECVC401 CONVERSION OF METERS

COURSE OBJECTIVE

To enable the students to

- know the necessity of different measuring Meters and their basic principle
- understand the working principle of different measuring instruments and technical solutions to handle different errors.

UNIT I BASIS STANDARDS OF METERS 15

Unit & dimensions, standards, Errors, Characteristics of Instruments and measurement system, basics of statistical, analysis. PMMC instrument, DC ammeter, DC voltmeter, Ohm meter, Moving Iron instrument, Electrodynamic Wattmeter, errors and remedies, Three Phase Wattmeter, Power in three phase system, Energy meter.

UNIT II MEASUREMENT OF PARAMETERS AND DIGITAL MEASUREMENT 15

Different methods of measuring low, medium and high resistances**,** measurement of inductance & capacitance with the help of AC Bridges- Wheatstone, Kelvin, Maxwell, Hay's, Anderson, Owen, Campbell, Schering, Wien bridges, Wagner Earthing device, Q Meter. Concept of digital measurement, Digital voltmeter, Frequency meter, Power Analyzer, Electronic, and phase Multimeter. CRT, time base, dual trace oscilloscope, Measurement, of voltage, frequency by CRO, Sampling Oscilloscope, DSO and DSO applications.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- learn units, dimensions, standards and errors and basics of different types of measuring instruments to measure different electrical quantities
- measure different electrical parameters using conventional bridges and acquire data through digital measuring instruments and interpret the data.

TEXT BOOK & MANUALS

Unit-I Style Sheets **15**

CSS-Introduction to Cascading Style Sheets-Features-Core Syntax-Style Sheets and HTML Style Rule Cascading and Inheritance-Text Properties-Box Model Normal Flow Box Layout-Beyond the Normal Flow-Other Properties-Case Study.

Unit II – JavaScript **15**

The JavaScript Language-History and Versions Introduction JavaScript in Perspective-Syntax Variables and Data Types-Statements-Operators- Literals-Functions-Objects-Arrays-Built-in Objects-JavaScript Debuggers.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- enough knowledge about what are the technologies used in internet.
- capability to make own web site and host their own web site on internet.

TEXT BOOK

1. Jeffrey C.Jackson, "Web Technologies--A Computer Science Perspective", PearsonEducation, 2006

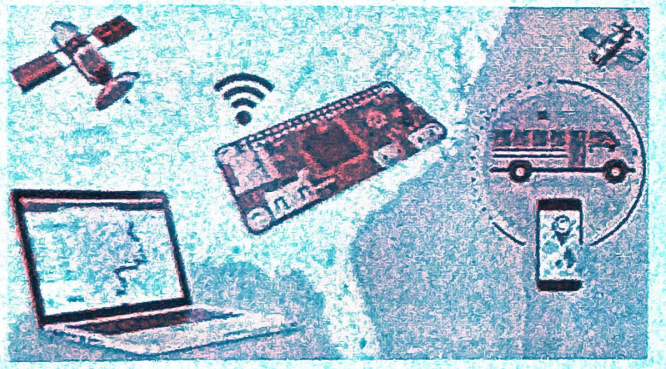
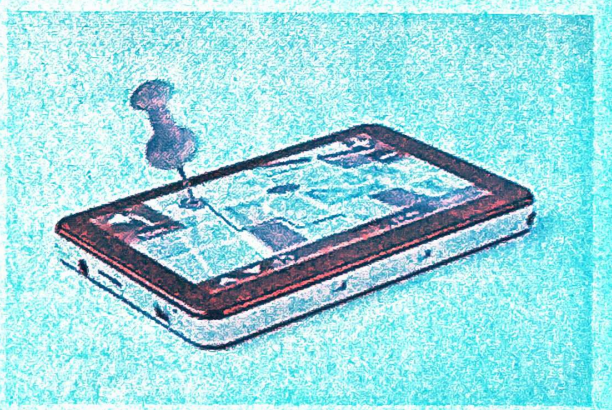
GPS TECHNOLOGY (INTERMEDIATE)





Date: 12.12.2016 – 16.12.2016

Course Co-ordinator: Mr. V. Sakthivel, ASP / ECE

Venue: M208

16ECVC601 **GPS TECHNOLOGY (INTERMEDIATE)**

COURSE OBJECTIVE

To enable the students to

- define the creation of the GPS modulated carrier wave.
- discuss the practical applications of GPS and the implications of its modernization

Unit I - GPS Signal structure **15**

Carriers, GPS codes: C/A, P, navigational message, GPS receiver: Types and Structure of receivers, Principles of GPS position fixing: Pseudo ranging**.** GPS observables

Unit II – **GPS Orbits:** **15**

Determination of GPS satellite coordinates, Types of ephemerides, GPS data formats: RINEX, SP3. GPS codes on signals, Describe the orbital bias.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- explain the uses of real-time kinematic GPS and DGPS
- recognize GPS Modernization

TEXT BOOK

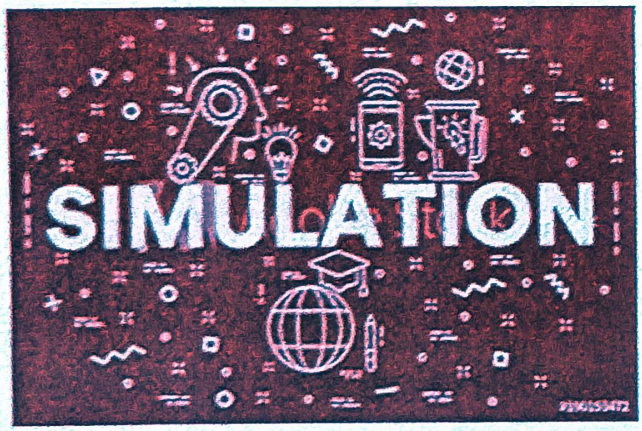
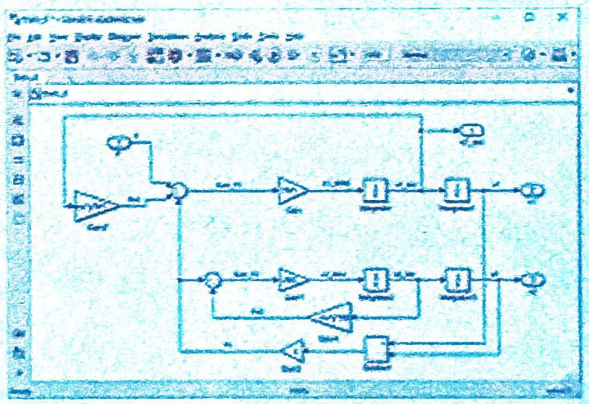
SCOPE FOR VARIOUS SIMULATION TECHNIQUES





Date: 13.06.2016 – 17.06.2016

Course Co-ordinator: Mr. G. Thirupathi, AP / ECE

Venue:M206

16ECVC701 **SCOPE FOR VARIOUS SIMULATION TECHNIQUES**

COURSE OBJECTIVE

To enable the students to

- understand Computer simulation of physical systems.
- understand physical dynamics of unknown entities.

Unit I **Introduction Computer simulations** **15**

Computer simulation of physical systems, function Simulate *(*Starting State; Starting Time; Boundary Conditions, Termination Condition*)*, Simulation: challenges in automated systems, The challenge of finding an appropriate modelling approach, The challenge of discretizing time, The challenge of discontinuous dynamics, The challenge of choosing an idealization.

Unit II **Limits to simulation** **15**

The physical dynamics of unknown entities, the challenge of irrelevant information, the challenge of range of scales. Interpolation between two states at two different times, Inferring the shape of an object from its physical behaviour, Inferring the physical properties of an object from its physical behaviour. The challenge of the frame problem, the challenge of using common sense to check simulations.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- simulation is effective for automated physical reasoning when the task is prediction.
- probabilistic simulation can be effective when a plausible probability distribution can be posited.

TEXT BOOK & MANUALS

1. Banks, J., Ed. (1998), Handbook of Simulation: Principles, Methodology, Advances, Applications, and Practice, John Wiley & Sons, New York, NY.
2. Banks, J., J.S. Carson, B.L. Nelson, and D.M. Nicol (2005), Discrete-Event System Simulation, Fourth Edition, Prentice-Hall, Upper Saddle River, NJ.

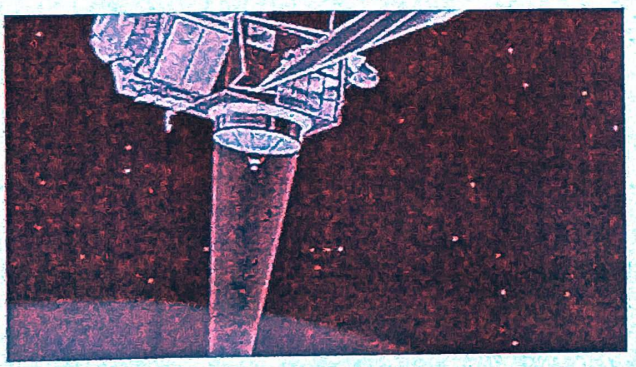
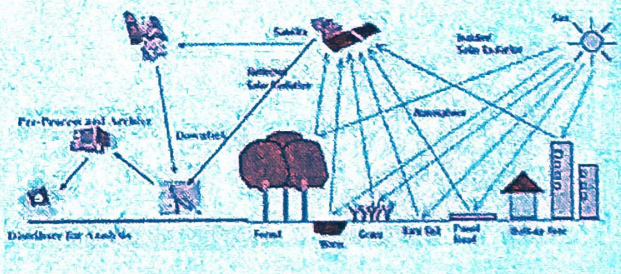
REMOTE SENSING (INTERMEDIATE)





Date: 12.12.2016 – 16.12.2016

Course Co-ordinator: Ms. B.Jothi, ASP / ECE

Venue: M208

16ECVC801 **REMOTE SENSING (INTERMEDIATE)**

COURSE OBJECTIVE

To enable the students to

- provide an exposure to various sensors, sensing and scanning techniques available in remote sensing.
- provide an exposure to various image interpretation techniques

Unit I Characteristics of Sensors **15**

Sensors –types and their characteristics, across track (whiskbroom) and along track (push broom) scanning, Optical mechanical scanners –MSS, TM, LISS, WiFi, PAN-Concept of resolution –spatial, spectral, temporal, radiometric, Basic concept and principles of thermal, microwave and hyperspectral sensing.

Unit II Image interpretation of Sensor **15**

Basic principles, types, steps and elements of image interpretation, Techniques of visual interpretation and interpretation keys, Multidate, multispectral and multidisciplinary concepts, Instruments for visual interpretation

TOTAL PERIODS **30**

COURSE OUTCOMES

Upon completion of this course, the students would have

- recognize the sensing and scanning techniques
- understand the image interpretation techniques employed in remote sensing

TEXT BOOK & MANUALS

1. Campbell, J.B., “Introduction to Remote Sensing”, Taylor Publications, 2002.

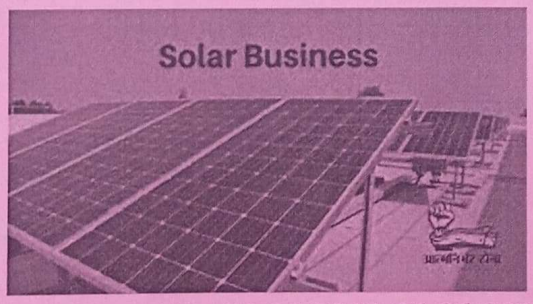
BUSINESS SCOPE - SOLAR ENERGY



Course Duration:22.06.2015-26.06.2015

Venue: PEC-Temple Tower -T211

Course Coordinator: S.Rathinavel AP/EEE

15EEVC301 BUSINESS SCOPE IN SOLAR ENERGY

COURSE OBJECTIVES

To enable the students to

- To understand the essential components required for solar PV installation
- To ensure the quality of material in solar plant and handling
- To have an idea on selling the market products.

UNIT I FUNDAMENTALS OF SOLAR PV 10

Solar PV Essentials - Different types of Solar Panels - Components of a Solar PV - Installation Systems – Solar Lighting and other application systems - Assessing site conditions.

UNIT II PV INSTALLATION 10

Understanding installation requirements - Collecting material for installation - Ensuring quality of material and handling - Material usage procedure

UNIT III IMPLEMENTATION OF PV PANEL 10

Assessing mounting - Installing the panel - Connecting the system - check for functioning - Completing the work.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the essential components required for solar PV installation
- Ensure the quality of material in solar plant and handling
- Have an idea on selling the market products.

POWER CONVERTER ANALYSIS AND DESIGN

Course Duration:01.12.2015-05.12.2015

Venue: PEC-Temple Tower -T211

Course Coordinator: A.Udhaya Kumar AP/EEE

15EEVC401 POWER CONVERTER ANALYSIS AND DESIGN

COURSE OBJECTIVES

To enable the students to

- To know the fundamental design and operation of the power semiconductors.
- To study the functions of the IGBT.
- To understand the functions and performance of the convertor.

UNIT I INTRODUCTION **10**

Power Devices and their driving circuitry IGBT, Power MOSFET, IGCT, SCR data sheet interpretation and gate drive Circuit Design, SiC MOSFET devices and their characteristics AC/DC Converters Review of three phase SCR bridge converters and performance analysis. Three phase and cascaded bridge structure with phase shifting transformer

UNIT II FUNCTIONS OF IGBT **10**

IGBT front end converter and their control in sync ref frame (ref frames should be taken up in beginning section in machine modeling course for this) four quadrant operation resistance emulation methods.

UNIT III CONVERTOR **10**

Single phase power factor correction circuits and control DC/AC converters Two level inverters: Selective Harmonic Elimination, SPWM, Space Vector. Advances in Space Vector Approach. Effect of dead time on performance and compensation schemes

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Fundamental design and operation of the power semiconductors are studied.
- Functions of the IGBT are understood.
- Configurations and performance of the convertors are analysed.

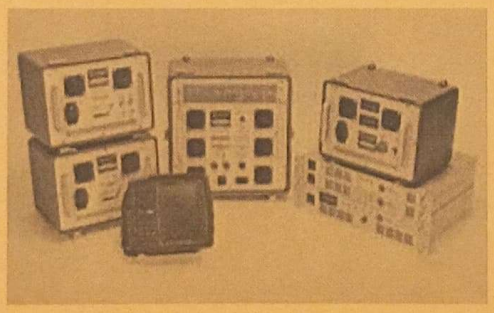
ULTRASONIC INSTRUMENTATION



Course Duration:22.06.2015-26.06.2015

Venue: PEC-Temple Tower -T212

Course Coordinator: S.Ramachandran AP/EEE

15EEVC501 ULTRASONIC INSTRUMENTATION

COURSE OBJECTIVES

To enable the students to

- This course provides adequate knowledge about the properties of ultrasonic wave and the method of generation.
- It also gives the knowledge about the testing and applications of ultrasonic waves
- To study the testing methods of ultrasonic

UNIT I ULTRASONIC WAVES CHARACTERISTICS 10

Ultrasonic waves – Principle and propagation of various waves – Characterization of ultrasonic transmission – Reflection and transmission coefficients – Intensity and attenuation of sounds beam Power level – Medium parameters.

UNIT II ULTRASONIC WAVE GENERATION 10

Generation of ultrasonic waves – Magneto stricture and piezoelectric effects – Search unit types – Construction and characteristics

UNIT III ULTRASONIC TEST METHODS 10

Ultrasonic test methods – Pulse echo – Transit time – Resonance – Direct contact and immersion type – Ultrasonic methods of flaw detection.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Demonstrate properties and characteristics of ultrasonic wave.
- Demonstrate properties and characteristics of ultrasonic wave.
- Measure the properties of ultrasonic wave and apply to various real time applications

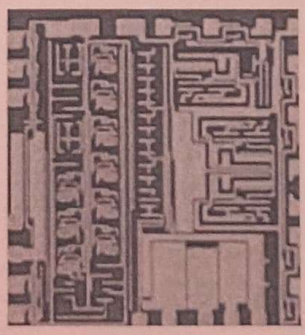
MIXED SIGNAL IC DESIGN



Course Duration:01.12.2015-05.12.2015

Venue: PEC-Temple Tower -T212

Course Coordinator: M.Raja AP/EEE

15EEVC601 MIXED SIGNAL IC DESIGN

COURSE OBJECTIVES

To enable the students to

- To know the fundamental of the CMOS amplifiers.
- To know the response of the frequency compensation schemes.
- To know the functions of the different amplifier switching techniques.

UNIT I CMOS AMPLIFIERS **10**

Building blocks for CMOS amplifiers: design of current mirrors, differential amplifiers, CMOS operational transconductance amplifiers: design of single ended telescopic cascade, folded cascade and two-stage amplifiers.

UNIT II FREQUENCY COMPENSATION SCHEMES **10**

Frequency compensation schemes: Miller compensation, Ahuja compensation and Nested Miller compensation.

UNIT III DIFFERENTIAL AMPLIFIERS AND SWITCHING TECHNIQUES **10**

Design of fully differential amplifiers, discussion of common mode feedback circuits. Switched capacitor circuits, design of switched capacitor amplifiers and integrators, effect of op amp finite gain, bandwidth and offset, circuit techniques for reducing effects of op amp imperfections, switches and charge injection and clock feed-through effects

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Fundamental of the CMOS amplifiers are studied.
- The response of the frequency compensation schemes is analysed.
- Switching techniques are amplifiers are understood.

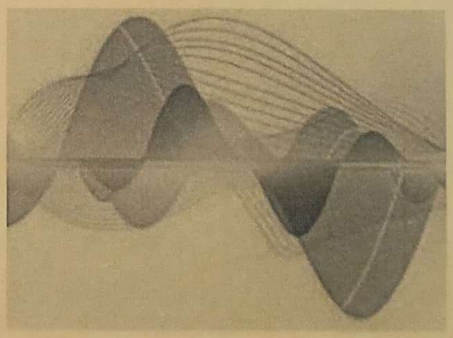
SIGNAL PROCESSING TECHNIQUES ON LABVIEW



Course Duration:22.06.2015-26.06.2015

Venue: PEC-Temple Tower -T213

Course Coordinator: R.Muthukumar AP/EEE

15EEVC701 SIGNAL PROCESSING TECHNIQUES ON LABVIEW

COURSE OBJECTIVES

To enable the students to

- To understand and become familiar with the analysis capabilities of LabVIEW
- To implement the VIs from the analysis library in practical applications for solving real- world problems.
- To learn about the various specialized toolkits such as those available for solving mathematical problems, analyzing non stationary signals, or designing digital filters

UNIT I LABVIEW PROGRAMMING ENVIRONMENT 10

Virtual Instruments (VIs) – Graphical Environment– Building a Front Panel, Building a Block Diagram, Grouping Data: Array and Cluster, Debugging and Profiling VIs , Building a Simple VI, Using Structures and SubVIs, Create an Array with Indexing , Debugging VIs: Probe Tool.

UNIT II DSP TECHNIQUES 10

Sampling, Quantization, Signal Reconstruction, FIR Filtering System, IIR Filtering System, Building a Filtering System Using Filter Coefficients,Filter Design without Using DFD Toolkit

UNIT III APPLICATIONS OF DSP 10

Adaptive Filtering Systems, System Identification, Noise Cancellation, Dual-Tone Multi-Frequency - DTMF Tone Generator System, DTMF Decoder System, DSP System Design: Software-Defined Radio-QAM Transmitter, QAM Receiver. Speech and Audio Signal Processing

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Apply mathematical knowledge for solving mathematical problems, analyzing non stationary signals, or designing digital filters using various specialized toolkits
- Apply the VIs from the analysis library in practical applications for solving real- world problems.
- Create new VIs for signal processing applications

ADAPTIVE SIGNAL PROCESSING

Course Duration:01.12.2015-05.12.2015

Venue: PEC-Temple Tower -T213

Course Coordinator: V.Sathiya Priya AP/EEE

15EEVC801 ADAPTIVE SIGNAL PROCESSING

COURSE OBJECTIVES

To enable the students to

- To know the fundamentals of the adaptive filter.
- Understand the complex values of filter.
- To know the RLs filters for digitalization.

UNIT I FUNDAMENTALS OF ADAPTIVE FILTER **10**

General concept of adaptive filtering and estimation, applications and motivation, Review of probability, random variables and stationary random processes, Correlation structures, properties of correlation matrices.

UNIT II COMPLEX VALUES OF FILTER **10**

Optimal FIR (Wiener) filter, Method of steepest descent, extension to complex valued The LMS algorithm (real, complex), convergence analysis, weight error correlation matrix, excess mean square error and mis-adjustment

UNIT III RLS FILTERS **10**

Introduction to recursive least squares (RLS), vector space formulation of RL Sestimation, seudo-inverse of a matrix, time updating of inner products, development of RLS lattice filters, RLS transversal adaptive filters. Advanced topics: affine projection and subspace based adaptive filters, partial update algorithms, QR decomposition and systolic array.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the non-linear control and the need and significance of changing the control parameters w.r.t. real-time situation.
- Mathematically represent the adaptability requirement
- Understand the mathematical treatment for the modeling and design of the signal processing systems.

DEPARTMENT OF MECHANICAL ENGINEERING

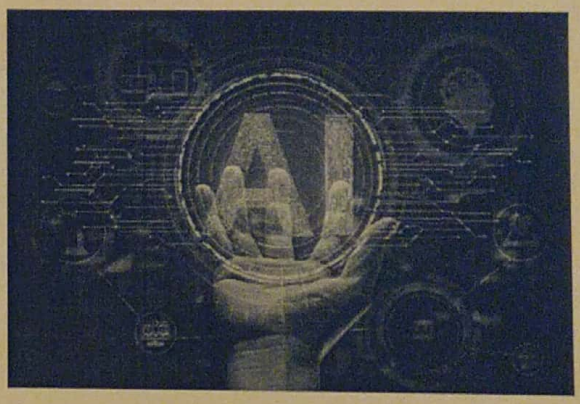
VALUE ADDED COURSE

ON

16MEVC301- ARTIFICIAL INTELLIGENCE

ABOUT THE COURSE:

The primary objective of this course is to introduce the basic principles, techniques, and applications of Artificial Intelligence. Emphasis will be placed on the teaching of these fundamentals, not on providing a mastery of specific software tools or programming environments. Assigned projects promote a 'hands-on' approach for understanding, as well as a challenging avenue for exploration and creativity.



INTENDED AUDIENCE:

1. II-, III- and IV-year students those wants to know the basic principle of Artificial intelligence.
2. Those wants to know the concepts and application of Artificial intelligence.
3. Those wants to know the real time application of the Artificial intelligence.

DURATION OF THE COURSE:

Period: 27.06.2016 to 01.07.2016

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning
3. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.

COURSE CO-ORDINATOR:

1. Mr. J.SUJITH KUMAR, AP/MECH, PEC
2. Mr.A.NATARAJAN, AP/MECH, PEC
3. Mr.P.VIVEK,AP/MECH, PEC

VENUE:

Seminar Hall,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 15.06.2016

Scanned by CamScanner

16MEVC301 **ARTIFICIAL INTELLIGENCE**

COURSE OBJECTIVES

To enable the students to

- know the basic concept artificial intelligence.
- know the effect artificial intelligence in industry oriented.
- apply AI techniques for different industrial application

1. **Introduction**:

   A brief review of AI history, What is artificial intelligence? , Related research fields , Scope of this course

2. **Production System**

   Production system, Inference engine, Working memory, Knowledge base, Pattern matching,

3. **Ontology**

   What is ontology? , Semantic network, Frame, Structural knowledge, Declarative knowledge, Procedural knowledge.

4. **Fuzzy Logic: Human-like decision making**

   Definition of fuzzy set ,Membership function , Notation of fuzzy set ,Operations of fuzzy set, Fuzzy number and operations , Extension principle , Fuzzy rules , De-fuzzification , Fuzzy control.

5. **Pattern Recognition**

   Concept and concept learning, Pattern classification and recognition. Feature vector representation of patterns. Nearest neighbour based learning. , Discriminant function and decision boundary. Multi-class pattern recognition. , General formulation of machine learning. The k-means algorithm.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of AI
- Apply the concepts for automation of industry.
- Apply the various engineering application.

VALUE ADDED COURSE

ON

16MEVC401-ANSYS I

ABOUT THE COURSE:

ANSYS is a popular and well recognised general purpose finite element modelling package for numerically solving a large range of problems including static, dynamic mechanical, structural analysis (linear and non-linear), heat transfer and fluid problems, as well as acoustic and electromagnetic problems. It is widely used in the mechanical, automobile, structural, chemical and aeronautical industries

INTENDED AUDIENCE:

- II-, III- and IV-year students those wants to know the basics Finite element modelling.
- Those wants to improve their knowledge on simulation software.
- Those wants to learn heat and structural analysis on mechanical components.

DURATION OF THE COURSE:

Period: 12.12.2016 to 16.12.2016

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. use the ANSYS package to solve basic engineering analysis problems using FEA techniques.
2. make the analysis on the most of the engineering components.
3. modelling the components in the ANSYS work bench.

COURSE CO-ORDINATOR:

1. Mr. S.PRABHAKARAN, AP/MECH, PEC
2. Mr.S.A.VENKATESH, AP/MECH, PEC
3. Mr.K.RAMACHANDRAN AP/MECH, PEC

VENUE:

PAAVAI ENGINEERING COLLEGE

Note: Interested students enroll their name to the course in charge on or before 07.12.2016.

Scanned by CamScanner

16MEVC401 **ANSYS - I**

COURSE OBJECTIVES

To enable the students to

- learn system requirements and units
- Understand the concepts sketching and part modelling
- familiarize with defining material properties

1 INTRODUCTION TO CAE

General working of FEA - Stiffness matrix - Boundary conditions - Elements and Element Shapes - General procedure to conduct FEA.

2 INTRODUCTION TO ANSYS WORKBENCH

System requirements - Starting ANSYS Workbench 14.0 - ANSYS Workbench 14.0 GUI - Working on a Project - Units in ANSYS Workbench - ANSYS Workbench Database and File format - Changing the unit system - Components of the system.

3 SKETCHING AND PART MODELLING IN DESIGN MODELER

Introduction to Modelling - Introduction to Design Modeler Window - Leaf Spring Section - Gear box housing Section - Air-duct Section

4 SOLID MODELLING FUNDAMENTALS

Introduction - Leaf Spring 2D modelling - Gear Box Housing 3D modelling - Air Duct 3D modelling.

5 DEFINING MATERIAL PROPERTIES

Introduction to Engineering Workspace - Creating and Adding Materials - Assigning Material to the Beam - Assigning Material to the Clamp - Assigning Material to the Assembly

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Familiarize the requirements and units of ANSYS
- Apply knowledge on sketching and modelling
- Evaluate the material properties.

VALUE ADDED COURSE

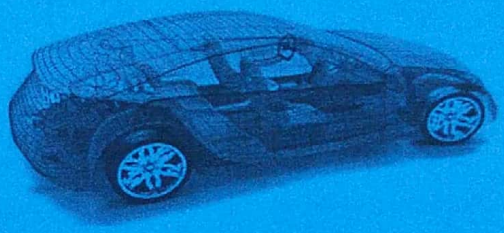
ON

16MEVC501-AUTOMOBILE DESIGN –I (SOFTWARE BASED PRO-E)

ABOUT THE COURSE:

This course aims to help design the automobile components like piston, connecting rod, cylinder and other elements by PRO-E software. Pro-E aims to train its students on how to use the Application in creating drawings and layouts of mechanical, aeronautical, machine, automotive and other relevant engineering areas. Upon completion of the course, the student would be able to make detailed projects

INTENDED AUDIENCE:



- II-, III- and IV-year students those who were interested in design of automobile components.
- Students those interested to know basics of PRO-E software.
- One who wants to know the need of designing software in automobile area.

DURATION OF THE COURSE:

Period: 27.06.2016 to 01.07.2016

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Sketching Parts in 2D environment.
2. Sketching Parts in 3D environment.
3. Constraints and measures to define a sketch.
4. Create complex parts by creating and modifying multiple bodies.

COURSE IN CHARGE:

1. Mr. V.ELANGO, AP/MECH, PEC
2. Mr. N.LOKESHWARAN, AP/MECH, PEC
3. Mr. K.VIJAYAKUMAR, AP/MECH, PEC

VENUE:

16MEVC501 AUTOMOBILE DESIGN –I (SOFTWARE BASED PRO-E)

COURSE OBJECTIVES

To enable the students to

- know the basics design procedure of Automobile parts.
- know various kind of commands and order used in particular software.
- write the program to various operations.

1. **BODY SYSTEMS**

   Complete Body-In-White , Floor Pans ,Underbody Assemblies, Door/Hood/Deck Assemblies, Roof Panels

2. **CHASSIS SYSTEMS**

   Cross member Assemblies ,Radiator Supports ,Shock Towers, Engine Cradles, Front and Rear Sub-Frame Assemblies ,Front and Rear Suspension Modules

3. **EXTERIOR SYSTEMS**

   Front and Rear Fascias , Energy Management Systems

4. **VEHICLE ENHANCEMENT PACKAGES**

   Ground Effects, Roof Racks, Running Boards.

5. **INTERIOR SYSTEMS**

   Door module, power closure system, Driver control, Latching system

TOTAL PERIODS 30

COURSE OUTCOMES At the end this course, students will be able to

- Use the Pro-e software to design the various elements in the particular area.
- .Develop the various elements in the automobile structure and assemble to convert as single unit.
- Make different unit in the Automobile structure.

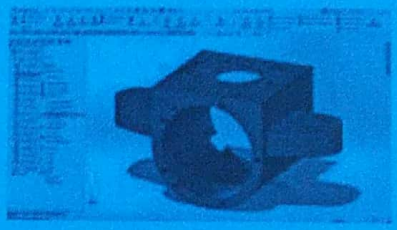
16MEVC601-INTRODUCTION TO CREO

ABOUT THE COURSE:

This course aims to help product designers and engineers in developing a product design virtually. Creo is equipped with all the capabilities that are required for completing a product design. This course in Creo will help in sketching, modeling, validation of design, and visualize the product design

INTENDED AUDIENCE:



- II-, III- and IV-year students those who were interested in product design.
- Students those interested to know modelling and assembly of components of a product.
- One who wants to know the specific need of CREO mechanical field.

DURATION OF THE COURSE:

Period: 12.12.2016 to 16.12.2016

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

- apply/develop solutions or to do research in the areas of Design and simulation in Mechanical Engineering.
- developing and applying computer software and hardware to mechanical design and manufacturing fields.
- Review and document the knowledge developed by scholarly predecessors.
- Design and validate technological solutions to defined problems and communicate clearly and effectively for the practical application of their work.

COURSE IN CHARGE:

1. Mr.R.MEIYAZHAGAN,AP/MECH, PEC
2. Mr. C.SURESH, AP/MECH, PEC
3. Mr.T.THANGAVEL, AP/MECH, PEC

VENUE:

16MEVC601 BASIC ELEMENTS OF CREO

COURSE OBJECTIVES

To enable the students to

- study the basics of Creo.
- understand the concepts of Sketching and Creating Extrudes, Revolves, and Ribs.
- familiar in Assembling with Constraints.

1 BASIC MODELLING PROCESS

Understanding Solid Modelling Concepts – Feature Based Concepts - Understanding Parametric Concepts and Associative Concepts - Understanding Model-Centric Concepts - Recognizing File Extensions

2 CREATING SKETCHER GEOMETRY

Reviewing Sketcher Theory - Understanding Design Intent - Modifying the Sketcher Display - Utilizing Constraints -Sketching with on the fly constraints -Sketching Lines, Centre lines, Rectangles, Sketching Circles, Arcs, Circular Fillets and Chamfers.

3 CREATING EXTRUDES, REVOLVES, AND RIBS

Creating Solid Extrude Features - Adding Taper to Extrude Feature - Common Dashboard Options: Extrude Depth - Common Dashboard Options: Feature Direction - Common Dashboard Options: Thicken Sketch - Creating Solid Revolve Features - Common Dashboard Options: Revolve Angle - Automatically Adding and Removing Material - Creating Rib Features.

4 ASSEMBLY

Understanding Assembly Theory - Creating New Assembly Models - Understanding Constraint Theory - Understanding Assembly Constraint Status - Assembling Components using the Default Constraint-Automatic- Distance, Angle Offset, Parallel, Coincident, Centred, Tangent.

5 CREATE DRAWING

Analyzing Detail Concepts and Types - Showing and Erasing Detail Items - Cleaning Up Dimensions - Manipulating Dimensions - Creating Driven Dimensions.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- describe the basics and commands in Creo.
- . dimension the modelled components.

- design the part model of different components and assembly

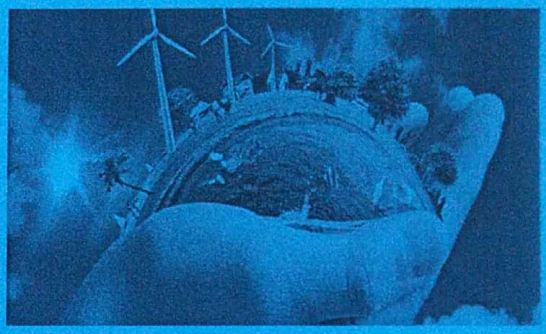
16MEVC701-GREEN ENERGY RESOURCES

ABOUT THE COURSE:

Green energy is that which comes from natural **sources**, such as the sun. Clean **energy** are those types which do not release pollutants into the air, and renewable **energy** comes from **sources** that are constantly being replenished, such as hydropower, wind **power** or solar **energy**.

INTENDED AUDIENCE:



- II-, III- and IV-year students those wants to know the fundamentals of natural energy.
- Those wants know about the various forms energy production system in nature.
- Those wants to know the difference between various energy system and how they produces electricity.

DURATION OF THE COURSE:

Period: 13.06.2016 to 17.06.2016

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. explain the principles that underlie the ability of various natural phenomena to deliver solar energy
2. outline the technologies that are used to harness the power of solar energy
3. discuss the positive and negative aspects of solar energy in relation to natural and human aspects of the environment.

COURSE IN CHARGES:

16MEVC701 GREEN ENERGY RESOURCES

COURSE OBJECTIVES

To enable the students to

- concepts of the renewable energy sources like wind, solar, Bio and other renewable energy resources.
- environmental friendly energy production and consumption.
- energy-efficient systems and products for various applications.

1. **Introduction**

   Energy needs of India, classification of energy sources, energy efficiency and energy security, importance of renewable energy resources.

2. **Solar Energy**

   Basic concepts, types of collectors, collection systems, photo voltaic (PV) technology: solar thermal effect, solar cells, characteristics of PV systems, equivalent circuit, and array design

3. **Wind Energy**

   Wind power systems, wind speed and power relation components, turbine types, turbine rating. Choice of generators and site selection

4. **Bio Energy**

   Bio-mass and bio-gas: principles of bioconversion, bio-gas digesters types, gas yield, and combustion characteristics

5. **Other Renewable Energy Resources**

   Geothermal energy, ocean thermal energy, wave energy, Tidal energy, waste to energy, heat to energy, Fuel cells: types and applications.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Provide Environmental friendly energy production and consumption system.
- Design energy-efficient systems and products for various applications

TEXT BOOKS

1. A.Duffie and W.A.Beckmann, Solar Engineering of Thermal Processes-John Wiley.

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF MECHANICAL ENGINEERING

VALUE ADDED COURSE

ON

16MEVC801-CATIA

ABOUT THE COURSE:

CATIA V5 or Computer Aided Three Dimensional Application is a powerful 3D parametric solid modeling software. It enables the development of high-quality mechanical products. It allows users to design shapes with 3D sketching and visualization features. Most importantly, its engineering, design, and system engineering capabilities make it very useful for the product manufacturing industry.

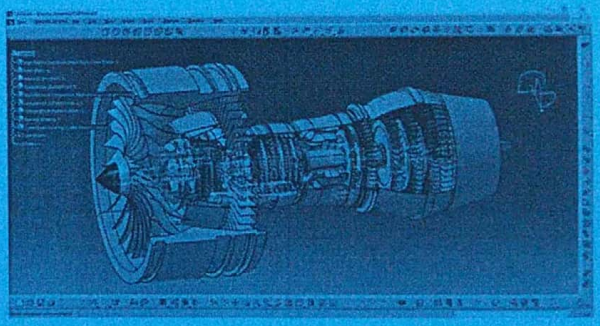
INTENDED AUDIENCE:

- II-, III- and IV-year students those interested in 3D modelling and designing.
- Those wants know about the various tools and commands used for 3 D modelling and designing of mechanical components. .
- One who wants to know specific application of CATIA software in mechanical field.

DURATION OF THE COURSE:

Period: 12.12.2016 to 16.12.2016

Total hours: 30 Hours (6 Hours /day)



COURSE OUTCOMES:

At the end of this course students can be able to

1. use their capacity of vision to interpret and/or convey the technical information in an industrial drawing.
2. able to apply graphical representation techniques using traditional metric geometry and descriptive geometry methods.
3. know, identify, interpret and apply the current standards on Industrial Technical Drawing. Computer aided design applications that allow students to elaborate and use graphical and technical.

COURSE IN CHARGES:

1. Mr.M.S.VIJAYANAND,ASP/MECH, PEC
2. Mr. R.GUNASEKARAN, AP/MECH,PEC
3. R.MOHANRAJ, AP/MECH,PEC

VENUE:

CAD/CAM LAB,

PAAVAI ENGINEERING COLLEGE.

Note: Interested students enroll their name to the course in charge on or before 07.12.2016.

Scanned by CamScanner

16MEVC801 **CATIA**

COURSE OBJECTIVE

To enable the students to

- gain strong ground on solid modeling techniques that would enhance the productivity in modeling
- develop the analysis process of mechanical components.
-

INTRODUCTION TO CATIA

Introduction to CATIA-History of CATIA-CATIA modeling process, Parametric design concept, feature based design etc-CATIA Features-SKETCHER-Creating a new part.

SKETCHER WORKBENCH

Basic sketch, Sketch in task environment, Selection tools-Profile, Predefined shapes, Circles, Spline, Conics, Line, Points-Operations, Corner, Chamfer, Relimitation tools-Projections, Transformations-Constraints, Sketch tools, Grid, Snap on grid, Construction-Geometrical constraints, Dimensional constraints., Sketch analysis-Visualization tools, View tool bar, Workbench.

TOTAL 30 PERIODS

COURSE OUTCOMES

Upon completion of this course, the students would have

- Learnt advanced solutions for conceptual design, 3D modelling, and documentation.
- Learnt to do product design, industrial design and styling (optimize form, fit, function and user experience), streamline 2D design, drafting, documentation with powerful tools for layout.

TEXT BOOK & MANUALS

DEPARTMENT OF MECHATRONICS

VALUE ADDED COURSE

16MTVC301 - INTRODUCTION TO CATIA

COURSE CONTENT:

- ✓ STATIC STRUCTURAL ANALYSIS
- ✓ SURFACE AND LINE MODEL
- ✓ BUCKLING ANALYSIS
- ✓ THERMAL ANALYSIS

Introduction To CATIA

DATE OF THE COURSE: 27.6.2016 to 1.7.2016

VENUE: T328

COURSE IN-CHARGE

S. MOHANKUMAR, AP/MCT

S. RAJESH RAJA, AP/MCT

16MTVC301 **INTRODUCTION TO CATIA**

COURSE OBJECTIVES

To enable the students to

- study the basics of CATIA.
- understand the concepts of part design and assembly.
- familiar in sheet metal design and drafting.

UNIT 1 BASICS OF CATIA

CATIA - Design Intent - System Requirements - Getting Started - Understand the CATIA Interface - Workbenches - Menus and Toolbars - Finding Tools -Specification Tree - Compass -Graphic Properties - Message Bar - Document Management.

UNIT 2 UNDERSTANDING VIEW MANIPULATION

Fly mode- Fit All In- Pan -Rotate - Zoom In - Zoom Out- Normal View- Multi View- Quick View- View mode- Hide/Show- Swap Visible Space.

UNIT 3 PROFILE CREATION USING

Profile - Predefined Profile - Circle - Spline – Conic - Line – Point- Axis.

UNIT 4 VISUALIZATION

Cut part by Sketch Plane - 3D Element visualization - 2D Element visualization - Diagnostics - Dimensional Constraints - Geometrical Constraints

UNIT 5 CONSTRAINTS

Constraint Creation - Contact Constraint - Fix together - Auto Constraint - Animate Constraint - Edit Multi Constraint.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- describe the basics and commands in CATIA.
- design the part model of different components.
- dimension the modelled components.

DEPARTMENT OF MECHATRONICS

VALUE ADDED COURSE

16MTVC401 - INTRODUCTION TO CREO

COURSE CONTENT:

- ✓ BASIC MODELLING PROCESS
- ✓ CREATING SKETCHER GEOMETRY
- ✓ CREATING EXTRUDES, REVOLVES, AND RIBS
- ✓ ASSEMBLY

DATE OF THE COURSE: 12.12.2016 to 16.12.2016

VENUE: T328

COURSE IN-CHARGE

M.VENUGOPAL, AP/MCT

R. RAMYA, AP/MCT

16MTVC401 **INTRODUCTION TO CREO**

COURSE OBJECTIVES

To enable the students to

- study the basics of Creo.
- understand the concepts of Sketching and Creating Extrudes, Revolves, and Ribs.
- familiar in Assembling with Constraints.

UNIT 1 **BASIC MODELLING PROCESS**

Understanding Solid Modelling Concepts – Feature Based Concepts - Understanding Parametric Concepts and Associative Concepts - Understanding Model-Centric Concepts - Recognizing File Extensions

UNIT 2 **CREATING SKETCHER GEOMETRY**

Reviewing Sketcher Theory - Understanding Design Intent - Modifying the Sketcher Display - Utilizing Constraints -Sketching with on the fly constraints -Sketching Lines, Centre lines, Rectangles, Sketching Circles, Arcs, Circular Fillets and Chamfers.

UNIT 3 **CREATING EXTRUDES, REVOLVES, AND RIBS**

Creating Solid Extrude Features - Adding Taper to Extrude Feature - Common Dashboard Options: Extrude Depth - Common Dashboard Options: Feature Direction - Common Dashboard Options: Thicken Sketch - Creating Solid Revolve Features - Common Dashboard Options: Revolve Angle - Automatically Adding and Removing Material - Creating Rib Features.

UNIT 4 **ASSEMBLY**

Understanding Assembly Theory - Creating New Assembly Models - Understanding Constraint Theory - Understanding Assembly Constraint Status - Assembling Components using the Default Constraint- Automatic- Distance, Angle Offset, Parallel, Coincident, Centred, Tangent.

UNIT 5 **CREATE DRAWING**

Analyzing Detail Concepts and Types - Showing and Erasing Detail Items - Cleaning Up Dimensions - Manipulating Dimensions - Creating Driven Dimensions.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- describe the basics and commands in Creo.
- dimension the modelled components.

- design the part model of different components and assembly

TEXT BOOKS

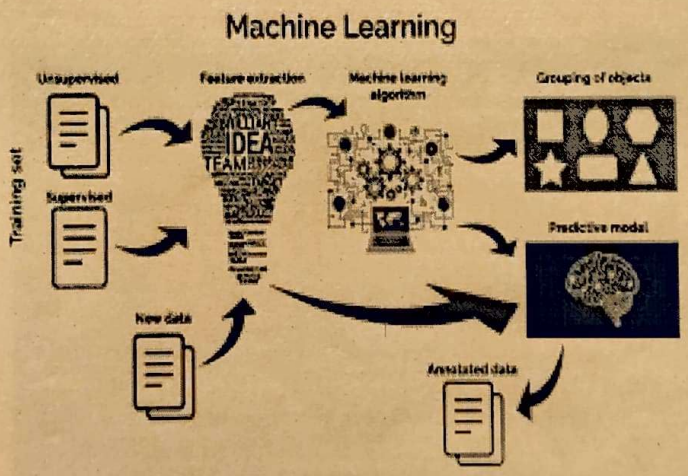
16MTVC501 - INTRODUCTION TO MACHINE LEARNING

COURSE CONTENT:

- ✓ SUPERVISED LEARNING METHODS
- ✓ SEMI SUPERVISED LEARNING METHODS
- ✓ UNSUPERVISED
- ✓ PROBABILISTIC NEURAL NETWORK



DATE: 27.6.2016 to 1.7.2016

VENUE: T327

COURSE IN-CHARGE

V.K. GOBINATH, AP/MCT

R. ARUNBABU, AP/MCT

16MTVC501 INTRODUCTION TO MACHINE LEARNING

COURSE OBJECTIVES

To enable the students to

- Understand the fundamentals of various machine learning algorithms
- gain knowledge on important methods in ANN, Fuzzy and Genetic algorithm
- study the machine learning algorithms for various heuristic and non-heuristic algorithms

UNIT 1 INTRODUCTION

Introduction to learning & classifiers- LDA - ANN - Naive Bayes classifier- decision tree Regression.

UNIT 2 SUPERVISED LEARNING METHODS

Ordinary Least Squares - linear and Logistic Regression- Gaussian process -Stepwise Regression - Multivariate Adaptive Regression Splines (MARS).

UNIT 3 SEMI SUPERVISED LEARNING METHODS

Locally Estimated Scatterplot Smoothing (LOESS) - overview of nearest neighbour - Support vector machines- Temporal difference learning - Q-learning.

UNIT 4 UNSUPERVISED

Expectation -maximization (EM) - Vector quantization, Clustering Fuzzy K & C means algorithm - Density-based spatial clustering of applications with noise (DBSCAN) - Conceptual Clustering- Association rule learning - Apriori algorithm- SVD

UNIT 5 NEURAL NETWORK

Perceptron - Probabilistic Neural Network (PNN) - Back-Propagation (BPN) - Hopfield Network - Self-Organizing Map (SOM).

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Differentiate the basics of supervised and semi supervised learning methods.
- Retrieve the unsupervised and reinforcement learning methods involved in artificial learning
- Interpret the concept of artificial neural networks and their control applications

TEXT BOOKS

VENUE: T327

COURSE IN-CHARGE

S. VIJAYAKUMAR, AP/MCT

M. GOKILA, AP/MCT

16MTVC601 **INDUSTRIAL ELECTRONICS**

COURSE OBJECTIVES

To enable the students to

- impart students with analysis of converters and inverters
- outline the formal procedures for relays, heating & welding control
- introduce the concept of process control

UNIT 1 **CONVERTERS AND INVERTERS**

Analysis of controlled and fully controlled converters-Dual converters; Analysis of voltage source and current source- current source and series converters

UNIT 2 **DC AND AC MOTOR CONTROL**

Method of controlling speed- Basic control circuit-DC motor control- AC motor control

UNIT 3 **SERVO AND STEPPER MOTOR CONTROL**

Servo motor control- Stepper motor control- micro controller-based speed control – solid state motor control-PLL control of a DC motor control

UNIT 4 **RELAYS, HEATING CONTROL**

Introduction- principle of relays- electromechanical relay- solid state relays- Latching relays timing relays- Induction heating- dielectric heating

UNIT 5 **MOTION CONTROL**

Elements of process control- temperature control- Flow control- Level control- Methods of motion control- feedback control- Direct digital control

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- design Analysis of voltage source and current source
- acquire knowledge on the basics about principle of relays
- design the process control of elements

DATE: 13.6.2016 to 17.6.2016

VENUE: T326

COURSE IN-CHARGE

C. SURESH KUMAR, AP/MCT

S. VINOTH, AP/MCT

15MTVC701 **ANSYS - II**

COURSE OBJECTIVES

To enable the students to

- learn the concept of Static Structural Analysis
- Understand the concepts Surface and Line Model
- familiarize with thermal analysis.

UNIT 1 STATIC STRUCTURAL ANALYSIS

Static Structural Analysis of Cantilever Beam, Plate with a central circular hole, Plate with a square slot, Pressure vessel, Bracket, Clevis assembly.

UNIT 2 SURFACE AND LINE MODEL

Introduction - Sheet with circular hole-plane stress - Pressure vessel - Line body model

UNIT 3 NATURAL FREQUENCIES

Modal analysis - Gear Box Housing without Prestress - Gear Box Housing with Prestress - Rotor Assembly.

UNIT 4 BUCKLING LOADS

Buckling analysis of - Fixed free column (flag pole) - Pinned-pinned column - Built-up structure.

UNIT 5 THERMAL ANALYSIS

Important terms used in thermal analysis - Types of thermal analysis - Steady state thermal analysis of - Car Disk Brake Rotor - Heat sink.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Familiarize the requirements of Static Structural Analysis
- Apply knowledge on Surface and Line Model
- Evaluate the various analysis.

DATE: 12.12.2016 to 16.12.2016

VENUE: T326

COURSE IN-CHARGE

D.R.P. RAJARATHNAM HOD/MCT
K. YUVARAJ, AP/MCT

16MTVC801 DISRUPTIVE INNOVATION BASED START UP ACTIVITIES

COURSE OBJECTIVES

To enable the students to

- make the participants understand as to how to get along with the task disruption led innovations.
- get the budding young entrepreneurs to do start-ups
- appreciate the structured knowledge of the dynamics of operationalizing creativity-based disruption strategy

UNIT 1 INNOVATION

Creativity linked innovation – Differences between Disruptive & incremental Innovations - Historical, theoretical, and practical evolution of disruptive innovation (DI).

UNIT 2 DISRUPTIVE INNOVATION

Idea generation & communication of creativity leading to DI. Innovation management concepts in DI based entrepreneur generation

UNIT 3 DISRUPTIVE BUSINESS MODEL

How do firms bring in new business models and get new products and services to the market? – Investor preferences in core versus new or disruptive business model.

UNIT 4 MARKET AND STRATEGY

Disruptors and the disrupted frameworks for assessing company's capabilities and rethinking product, market and strategy - Right customers for DI.

UNIT 5 APPLICATIONS

Strategy in a world that is changing so rapidly – Application of disruptive theories to complex problems and opportunities

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understanding contemporary entrepreneurship as an important career option
- Concept and methodology of creative disruption to viable start-ups
- Events to occur in the building of a technology-based venture for students or working professionals or women with disruptive technology option

2. S.SINDHUBALA, AP/IT

16ITVC301 PL/SQL FUNDAMENTALS

COURSE OBJECTIVES

To enable the students to

- Describe the features and syntax of PL/SQL
- Describe stored procedures and functions
- Use PL/SQL programming constructs and conditionally control code flow (loops, Control structures, and explicit cursors)

Unit 1

Introduction to PL/SQL-Declaring PL/SQL Identifiers-Interacting with the Oracle Server

Unit 2

Writing Control Structures-Working with Composite Data Types- Explicit Cursors

Unit 3

Handling Exceptions with PL/SQL-Creating Stored Procedures- Stored Functions Creating Packages-Oracle Supplied Packages in Application Development-Dynamic SQL and Metadata

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze the features and syntax of PL/SQL
- Analyze stored procedures and functions
- Implement PL/SQL programming constructs and conditionally control code flow (loops, Control structures, and explicit cursors)

16ITVC401 INTRODUCTION TO CORELDRAW

COURSE OBJECTIVES

To enable the students to

- To learn about Drawing and Shaping objects
- To understand about corelDRAW
- To learn about working with Bitmaps

Unit I

Introduction to CorelDRAW: Getting Started - Moving Around and Viewing Drawings - Basic Drawing Skills Selecting and Manipulating Objects - Drawing and Shaping Objects - Arranging Objects . **Using Text** : Working With Text - Working With Objects - Outlining and Filling Objects - Using Symbols and Clipart - Transforming Objects

Unit II

Adding Special Effects Special Effects - Creating Output - Exporting Drawings - Printing Customizing CorelDRAW Introduction - Customizing Options - Using Text and Color - Working With Color - Working With Paragraph Text - Special Text Effects - Layouts and Layers - Special Page Layouts - Arranging Objects - Using Layer

Unit III

Styles and Templates Using Styles and Templates - Advanced Effects - Special Interactive Effects - Custom Creation Tools - Working With Bitmaps - CorelTRACE and Corel R.A.V.E.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Describe about Drawing and Shaping objects
- Explore the concepts of corelDRAW
- Implement working with Bitmaps

2. J.SINDHUJA, AP/IT

16ITVC501 **ANGULAR J S WITH JAVASCRIPT**

COURSE OBJECTIVES

To enable the students to

- To understand about HTML tags.
- To learn about concept of CSS
- To understand about Javascript

Module 1: Introduction to HTML

- HTML Basics, Elements, Attributes, Styles
- Forms, Form Elements, Input Element Types
- Input Attributes, File Paths, Script tag
- HTML &XHTML

Module 2: Introduction to CSS

- CSS Introduction, Syntax, Selectors, Styling
- Pseudo class, Pseudo Elements
- CSS Tables, CSS Box Models
- CSS Opacity, CSS Navigation Bar, Dropdowns

Module 3: Introduction to JavaScript

- JavaScript Statements, Keywords, Functions
- JavaScript Programs, Operators, Functions
- Function Parameters, Function Return Types
- Data Types, Primitive Types

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Implement the HTML tags.
- Analyze the concept of CSS
- Demonstrate about Javascript

16ITVC601 INTRODUCTION TO ARDUINO

COURSE OBJECTIVES

To enable the students to

- To understand about Embedded system.
- To learn about Concept of digital and analog ports
- To Understand about basic concepts of arduino

Module1 Introduction

- Introduction to embedded system
- Understanding Embedded System
- Overview of basic electronics and digital electronics.
- Microcontroller vs. Microprocessor
- Common features of Microcontroller.
- Comparison between the two
- Different types of microcontrollers.

Module2 Getting Started with Arduino

- Introduction to Arduino
- Pin configuration and architecture.
- Device and platform features.
- Concept of digital and analog ports.
- Familiarizing with Arduino Interfacing Board
- Introduction to Embedded C and Arduino platform

Module3 Review of Basic Concepts

- Arduino data types
- Variables and constants
- Operators
- Control Statements
- Arrays
- Functions

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Design and implement Embedded system.
- Implement the Concept of digital and analog ports
- Analyze about basic concepts of arduino

Date: 01.02.2017 to 17.02.2017

Venue: Class Room No: Ground Floor Computer Lab

COURSE CO-ORDINATOR

Mrs. M. Revathi AP/CSE

16PCEVC101 **WEB VIRTUAL REALITY**

COURSE OBJECTIVES

To enable the students to

- understand the concept everything from the basics of VR- the hardware
- know better about VR- to different applications of VR, the psychology of Virtual Reality, and the challenges of the medium.
- design the evaluate existing VR applications, and design, test, and implement their own VR experiences/games

Module 1: Virtual Reality- Hardware and History

- What is VR and How is it Different from Other Media?
- Displays | CAVE and HMDs
- Head Tracking
- Controllers
- Choosing your VR Device
- HMD | Oculus Rift
- HMD | HTC Vive
- HMD | Sony PlayStation VR

Module 2: VR Applications

- Introduction to the VR Technical Framework
- 360 Video and Model Based VR
- News and Documentary Films
- Scientific Data Visualisation
- Medical Training

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- know the basics of everything from the basics of VR- the hardware
- understand the the psychology of Virtual Reality, and the challenges of the medium.
- know the concept of VR applications, and design, test, and implement their own VR experiences/games.

16PCEVC201 - INTRODUCTION TO MODERN APPLICATION DEVELOPMENT

Mobile app development is the act or process by which a mobile app is developed for mobile devices, such as personal digital assistants, enterprise digital assistants or mobile phones. These software applications are designed to run on mobile devices, such as a smartphone or tablet computer.

INTENDED AUDIENCE

- I – Year M.E, M.Tech - Students

Date: 19.08.2016 to 24.08.2016

Venue: Class Room No: Ground Floor Computer Lab

COURSE CO-ORDINATOR

Mr. P.Prabakaram, AP/CSE

16PCEVC201 INTRODUCTION TO MODERN APPLICATION DEVELOPMENT

COURSE OBJECTIVES

To enable the students to

- understand the concept of VR
- know about VR in detail
- understand the concept of VR application

Module 1: Virtual Reality- Hardware and History

- What is VR and How is it Different from Other Media?
- Displays | CAVE and HMDs
- Head Tracking
- Controllers
- Choosing your VR Device
- HMD | Oculus Rift
- HMD | HTC Vive
- HMD | Sony PlayStation VR

Module 2: VR Applications

- Introduction to the VR Technical Framework
- 360 Video and Model Based VR
- News and Documentary Films
- Scientific Data Visualisation
- Medical Training

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Knowledge about VR application.
- Design the VR techniques in real life
- Develop the VR application

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Training Course

PEDAGOGY

Date: 16.08.2016 to 20.08.2016

Course Incharge: Dr.A.S.Kandasamy

16PCOVC101/

16PVLVC101/

16PAEVC101

PEDAGOGY

(Common for M.E. communication Systems/ VLSI Design, Applied Electronics)

COURSE OBJECTIVE

To enable the students to

- give an exposure to the basic concepts, in pedagogy
- provide the key learning theories of pedagogy

Unit I: Basic concepts, in pedagogy **15**

Theories of Teaching, Teaching Strategies, Simulated Teaching, Team Teaching, Models of Teaching, Micro Teaching, Modification of Teacher, Behavior and Interaction Analysis

Unit II: learning theories of pedagogy **15**

Concept Nature Types and Importance, Factors Affecting Learning- Behaviorism and Behavioristic Theories of Learning, Cognitivism and Cognitivist Theories of Learning- Humanism and Humanistic Theories of Learning- Constructivism and Constructivist Learning- Cognition and Learning- learning Strategies

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- know the concepts in pedagogy
- Recognize the key learning theories in pedagogy

TEXT BOOK & MANUALS

1. Hooks, Bell. (2008), Teaching Community: Pedagogy of Hope (TC), Cambridge University Press

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

M.E(Communication Systems, VLSI Design, Applied Electronics)

Training Course

BASICS OF JOURNAL WRITING

Date: 1.2.2017 to 7.2.2017

COURSE INCHARGE

1. Dr.R.Arangasamy, HOD/ECE

16PCOVC201/

16PVLVC201/

16PAEVC201

BASICS OF JOURNAL WRITING

(Common for M.E. communication Systems/VLSI Design, Applied Electronics)

COURSE OBJECTIVE

To enable the students to

- introduce basic concepts in Research
- provide an exposure to Data Collection and Analysis

Unit I Research Methodology **15**

Introduction to Research Methodology, Meaning and importance of Research – Types of Research – Selection and formulation of Research Problem -Research Design –Developing a Research Plan – Exploration, Description, -Diagnosis, Experimentation, -determining Experimental and Sample Designs. -Analysis of Literature Review –Primary and Secondary Sources, -Web sources –critical Literature Review Hypothesis – Different Types

Unit II Data Collection and Analysis **15**

Data Collection and Analysis- Sources of Data – Primary, Secondary and Tertiary – Types of Data – Categorical, nominal & Ordinal. - Methods of Collecting Data: Observation, field investigations, -Direct studies – Reports, Records or Experimental observations. -Sampling methods – Data Processing and Analysis strategies- Graphical representation – Descriptive Analysis – Inferential Analysis- Data Analysis using statistical package – Hypothesis – testing – Generalization and Interpretation – Modeling.

TOTAL PERIODS **30**

COURSE OUTCOMES

Upon completion of this course, the students would have

- understand the basic concepts in Research
- recognize the Data Collection and Analysis methods

TEXT BOOK & MANUALS

1. Garg.B.L., Karadia, R., Agarwal,F. and Agarwal, U.K., 2002. An introduction to Research Methodology, RBSA Publishers.
2. Kothari, C.R.(2008). Research Methodology: Methods and Techniques. Second Edition. New Age International Publishers, New Delhi.
3. Sinha, S.C. and Dhiman, A.K., 2002. Research Methodology, Ess Ess Publications. 2 volumes.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Training Course

STUDY OF RESEARCH FELLOWSHIP

Date: 27.06.2016 to 01.07.2016

Course Incharge: Dr.T.Saravanan

16PCOVC301/

16PVLVC301/

16PAEVC301

STUDY OF RESEARCH FELLOWSHIP

(Common for M.E. communication Systems/ VLSI Design, Applied Electronics)

COURSE OBJECTIVE

To enable the students to

- understand the concept of Research methodology and Research Aptitude.
- understand the designing of Research plan and models.

Unit-I Research aptitude including Research Methodology **15**

Research Methodology with emphasis on Clinical Research Conduct & Monitoring, Good Clinical Practices, Protocol Development, Bio-ethics, Bio-statistics

Unit II – Research design and Plan **15**

Research Design – Need – Features – Inductive, Deductive and Development of models, Developing a Research Plan – Exploration, Description, Diagnosis, Experimentation, Determining Experimental and Sample Designs.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- analyze Research methodology and developing the protocols.
- develop the Research plan and developing the models.

TEXT BOOK & MANUALS

1. Garg, B.L., Karadia, R., Agarwal, F. and Agarwal, U.K., 2002. An introduction to Research Methodology, RBSA Publishers

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF MECHANICAL ENGINEERING

VALUE ADDED COURSE

ON

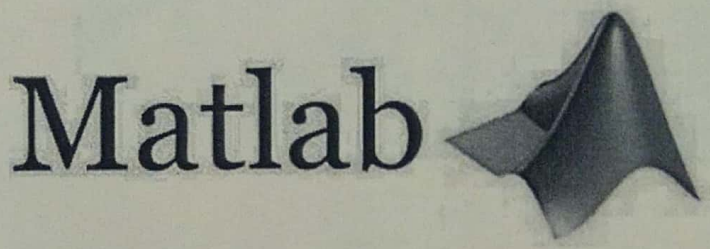
16PEDVC01- MAT LAB AND ITS APPLICATION

ABOUT THE COURSE:

Matlab or Matrix Laboratory is a high-level programming language consisting of an interactive environment mainly used for numeric computation, programming, and visualization. It has been developed by Math Works. The basic functions of Matlab are plotting of functions and data, the creation of user interfaces, matrix manipulations. It is also used to analyze data, create models and applications, and also develop algorithms.

INTENDED AUDIENCE:

1. I and II year PG students those wants to learn about MATLAB and its coding.
2. Those wants to know the application of MATLAB in design field.
3. Those wants to apply the concept of MATLAB in real time application.



DURATION OF THE COURSE:

Period: 16.08.2016 to 20.08.2016

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. use MATLAB effectively to analyze and visualize data.
2. apply numeric techniques and computer simulations to solve engineering-related problems.
3. apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objective

COURSE CO-ORDINATOR:

Mr.M.MAKESH, ASP/MECH

VENUE:

CAD/CAM LAB,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 11.08.2016.

Scanned by CamScanner

16PEDVC01 **MAT LAB AND ITS APPLICATION**

COURSE OBJECTIVES

To enable the students to

- know the basics of MAT LAB
- know how to change data's into matrix form.
- understand how to represent the basic operation and logical operation into MAT LAB codes.

1. **Introduction**

   Basic of MATLAB, Types of Window, Types of File, Basic Operations.

2. **Matrix (Array Design)**

   Matrix Operation, Array Design, Array Operation, Multidimensional Array.

3. **Symbolic Calculation**

   Symbols, Design Formula, Differentiation, Integration, Solve Equation

4. **Operators**

   Arithmetic Operator, Logical, Relational, Example for above operators.

5. **Branch and Loop**

   If statement, If-else statement, Else-if statement, Pause, Break, Continue, Switch-case, try-catch, Return Statement For Loop, While Loop

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Open the MAT LAB window and represent the data into Matrix form.
- Write the code for arithmetic operator and logical operators.
- Write code using if- else, While loop for the give statement.

VALUE ADDED COURSE

ON

16PEDVC02-AUTOMATION ANYWHERE

ABOUT THE COURSE:

This course gives you an introduction to Automation Anywhere, a well-known Robotic Process Automation tool that enables businesses to automate end-to-end operations. Learn the basics of Automation Anywhere, understand how advanced intelligent applications work, and get an overview of RPA concepts and its various benefits through this course.

INTENDED AUDIENCE:

1. I and II year PG students those interested in automation.
2. Those wants to know the basic concept and working of automation in industry.
3. Those wants to apply the concept in real time application.

DURATION OF THE COURSE:

Period: 26.12.2016 to 30.12.2016

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. provide the automation concept in industry.
2. explain the terms, rules for automation.
3. describe the characteristics of the automation in industry.
4. explain how to work with automation systems.

COURSE CO-ORDINATOR

Mr.P.PUGALENTHI, AP/MECH

VENUE:

Seminar Hall II,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 23.12.2016.

16PEDVC02 AUTOMATION ANYWHERE

COURSE OBJECTIVES

To enable the students to

- know the basics of automation.
- know key elements of automation.
- apply the concepts of automation in industry.

1. **Introduction to Robotic Process Automation**

   Introduction to RPA and Use cases – Automation Anywhere Enterprise Platform – Advanced features and capabilities.

2. **Web Control Room**

   Introduction - Features Panel - Dashboard (Home, Bots, Devices, Audit, Workload, Insights) - Features Panel – Activity (View Tasks in Progress and Scheduled Tasks) - Bots (View Bots Uploaded and Credentials)

3. **Coating methods**

   Roll coating, Reverse roll coating, gravure roll coating, Premiered coatings like extrusion coaters Slide or cascade coaters, curtain coaters, cast Coating

4. **Bot Creator**

   Introduction – Recorders – Smart Recorders – Web Recorders – Screen Recorders - Task Editor – Variables - Command Library – Loop Command – Excel Command – Database Command - String Operation Command

5. **Meta Bot and Bot Insight**

   Introduction - MetaBot Designer - MetaBot With AI Sense - Bot Insight - Transactional Analytics - Operational Analytics - Course Key Points.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of automation in industry.
- Use basic key elements in appropriate place for automation.
- Design and make the industry in complete automation sector.

INVENTORY SYSTEMS ANALYSIS

Course Duration:09.08.2016-24.08.2016

Venue: PEC-Temple Tower -T207

Course Coordinator: Mr.M.Raja AP/EEE

16PPEVC101 **INVENTORY SYSTEMS ANALYSIS**

COURSE OBJECTIVES

To enable the students to

- analyze the basic concepts of inventory theory.
- understand the different types of deterministic inventory models.
- develop probabilistic inventory models in several aspects.

UNIT I **DETERMINISTIC INVENTORY SYSTEM** **10**

Introduction – Types of Inventory – Costs and factors of inventory – Basics of constrained and unconstrained optimization - Economic Order Quantity (EOQ) model with and without shortages – Economic Production Quantity (EPQ) model with and without shortages.

UNIT II **EXTENSIONS OF DETERMINISTIC INVENTORY SYSTEM** **10**

Multi product Inventory system – Constraints of Inventory system – Inventory model with one and multiple Price Break – Inventory with variable Setup/or Ordering cost - Integrated Procurement Production (IPP) model - EOQ and EPQ model with various demand patterns.

UNIT III **PROBABILISTIC INVENTORY SYSTEM** **10**

Inventory problem with uncertain demand – Forecasting demand - One period inventory problem – Probabilistic scheduling period - Uncertain received quantity model - Probabilistic order level system - Dynamic order quantity – Controllable lead time.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- state the objectives of inventory system and recognize their impact on cost and service.
- use optimization techniques to minimize total inventory system cost in deterministic environment.
- use inventory-theoretic models to design optimal supply chain management.

FUNDAMENTALS OF CLOUD SECURITY

Course Duration:01.02.2017-05.02.2017

Venue: PEC-Temple Tower -T207

Course Coordinator: Mr.R.Muthu Kumar AP/EEE

16PPEVC201 FUNDAMENTALS OF CLOUD SECURITY

COURSE OBJECTIVES

To enable the students to

- introduce the Cloud Computing Model and Cloud Infrastructure Security
- discuss the threats to data security and identity management
- explore the methods for security management and privacy in cloud Computing

UNIT I CLOUD COMPUTING FUNDAMENTALS, ARCHITECTURE AND RISK ISSUES 10

Fundamentals: Cloud computing – Essential characteristics – Architectural, Technical and Operational Influence architecture: Cloud delivery models (SaaS, PaaS, IaaS) – Cloud Service Providers (Amazon, Google, Azure, Salesforce) – Cloud deployment models (Public, Private, Community, Hybrid) – Benefits. Risk Issues: CIA – Privacy & Compliance Risks .

UNIT II CLOUD COMPUTING SECURITY CHALLENGES AND ARCHITECTURE 10

Security Challenges: Security policy types – Virtualization Security Management – Virtual Threats – VM Securityrecommendations – VM specific security techniques.Security Architecture: General Issues – Trusted cloud computing – Secure execution environments and communications – Identity management – Access control – Autonomic security.

UNIT III INFRASTRUCTURE, DATA SECURITY AND IDENTITY MANAGEMENT 10

Infrastructure & Data Security: Network Level – Host Level – Application Level – Data security Mitigation – Provider data and its security.Identity & Access Management (IAM): Trust Boundaries and IAM – IAM Challenges – IAM Architecture and Practice – IAM Standards and Protocols for Cloud Services – IAM Practices in the Cloud – Cloud Authorization Management – Cloud Service Provider IAM Practice

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Design a Cloud Computing Model and Cloud Secure Infrastructure
- Manage the threats to data security and do identity management in Cloud
- Deploy the appropriate methods for security management in cloud computing

SENSORS AND SENSING TECHNIQUES

Course Duration:07.07.2016-11.7.2016

Venue: PEC-Temple Tower -T207

Course Coordinator: Dr.A.Rathinam Prof/EEE

16PPEVC301 **SENSORS AND SENSING TECHNIQUES**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on the sensor characteristics and the fundamental principles of sensing
- learn the optical components of sensors and characteristics of interface electronic circuits
- get acquainted with motion-related sensors

UNIT I PRINCIPLES OF SENSING **10**

Data acquisition – Sensor characteristics: Transfer function – Calibration – Accuracy – Calibration error -Nonlinearity – Saturation – Repeatability – Reliability – Uncertainty. Physical principles of sensing: electric charges, fields, potentials – capacitance – magnetism – resistance – piezoelectric effect – pyroelectric effect – Hall effect – thermoelectric effects – sound waves

UNIT II OPTICAL COMPONENTS AND INTERFACE ELECTRONICS **10**

Optical Components of sensors: Radiometry – Photometry – Windows - mirrors – lenses – Fresnel Lenses – fiber optics – concentrators. Interface electronic circuits: Input characteristics – amplifiers – light-to-voltage converters – Excitation circuits – Analog-to-Digital converters – Direct digitization.

UNIT III MOTION RELATED SENSORS **10**

Occupancy and motion detectors: Ultrasonic – microwave motion – capacitive occupancy – triboelectric – optoelectronic motion – optical presence sensors – Pressure-gradient sensors. Velocity and acceleration: Accelerometer characteristics – capacitive accelerometers.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Extrapolate the characteristics of sensors by knowing the physical principles of sensors
- Predict the optical components of sensors
- Apply appropriate motion-related sensors

TEXT BOOKS

NANOELECTRONIC DEVICES AND NANOSENSORS

Course Duration:19.08.2016-24.08.2016

Venue: PEC-Temple Tower -T208

Course Coordinator: Dr. A.Rathinam Prof/EEE

16PPSVC101 NANOELECTRONIC DEVICES AND NANOSENSORS

COURSE OBJECTIVES

To enable the students to

- make students to learn the basic concepts of Nano-electronics
- understand the quantum devices
- know the tunneling devices and its uses

UNIT I BASICS OF NANOELECTRONICS AND QUANTUM DEVICES 10

Physical fundamentals – basic information theory – data & bits – data processing - Quantum Electronic devices –Electrons in mesocopic structures – Short channel, MOS Transistor – split Gate Transistor – Electron wave transistor – Electron spin transistor – Quantum Dot array

UNIT II TUNNELING DEVICES 10

Tunneling element – Tunnel Effect -Tunneling Diode – Resonant Tunneling Diode – Three -Terminal Resonate Tunneling Devices-Technology of RTD-Digital circuits design based on RTDs - Basics Logic Circuits – Single Electron Transistor (SET) – Principle – Coulomb Blockade

UNIT III LIMITS OF INTEGRATED ELECTRONICS AND REPLACEMENT TECHNOLOGIES 10

Survey about the limits- replacement technologies-energy supply and heat dissipation-parameter spread as limitingeffect- limits due to thermal particle motion- reliability as limiting factor-physical limits-final objectives of integrated chips and systems.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- design advanced electronic systems integrated on a miniaturized Silicon chip
- analyze and design a range of devices using relevant mechanical/electrical engineering principles.
- apply the basic Nano-sensor concepts for their applications.

THEORY OF PLASTICITY

Course Duration:01.02.2017-05.02.2017

Venue: PEC-Temple Tower -T208

Course Coordinator: Mr.R.Muthu Kumar AP/EEE

16PPSVC201 THEORY OF PLASTICITY

COURSE OBJECTIVES

To enable the students to

- review fundamentals of elasticity theory.
- learn the plastic stress-strain relations and its applications in design
- know the yield criteria for ductile metal

UNIT I FUNDAMENTALS OF ELASTICITY 10

Concept of stress - Stress transformation - Spherical and deviator stress tensors - Equilibrium equations – Octahedral stresses - Concept of strain - deviator and spherical strain tensors - strain transformation laws - Generalized Hooke's law - Compatibility equations - Theories of strength - Problems.

UNIT II PLASTIC DEFORMATION OF METALS 10

Crystalline structure in metals - Mechanism of plastic deformation - Factors affecting plastic deformation – Strain hardening - Recovery, recrystallization and grain growth

UNIT III STRESS STRAIN RELATIONS 10

Introduction - Types of materials - Empirical equations - Theories of plastic flow - Experimental verification of St.Venant's theory of plastic flow - Concept of plastic potential, the maximum work hypothesis and mechanical work for deforming a plastic substance.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- demonstrate the applications of elasticity to field problems
- describe the elastic and plastic behavior from typical stress-strain curves formaterials.
- apply the typical plastic yield criteria and accordingly design the elements.

EVOLUTIONARY COMPUTING

Course Duration:07.07.2016-11.07.2016

Venue: PEC-Temple Tower -T208

Course Coordinator: Dr. G.Balaji Prof/EEE

16PPEVC301 EVOLUTIONARY COMPUTING

COURSE OBJECTIVES

To enable the students to

- formulate and assess problems in evolutionary computation.
- assess the strengths and weaknesses of several approaches to evolutionary computation
- analyze various classifier systems

UNIT I EVOLUTIONARY ALGORITHM 10

Evolutionary Algorithm: Introduction – Components of Evolutionary Algorithms -Working of an Evolutionary Algorithm – Evolutionary Computing and Global Optimization – Genetic Algorithms: Representation of Individuals – Mutation – Recombination - Population Models – Parent Selection– Survivor Selection

UNIT II EVOLUTION STRATEGIES AND PROGRAMMING 10

Evolution Strategies : Representation – Uncorrelated Mutation with One Step Size and n Step Sizes– Correlated Mutations – Self-Adaptation – Example: Ackley Function – Subjective Evolution of Colour Mixes – Evolutionary Programming: Recombination – Parent Selection –Survivor Selection.

UNIT III MULTIMODAL PROBLEMS AND SPATIAL DISTRIBUTION 10

Multimodal Problems and the Need for Diversity – Implicit Measures – Explicit Diversity Maintenance –Multiobjective Evolutionary Algorithms– Example Application

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- practice evolutionary and genetic algorithm
- apply evolution algorithm for hardware design
- analyze the algorithms for multimodal problems

Value Added Course

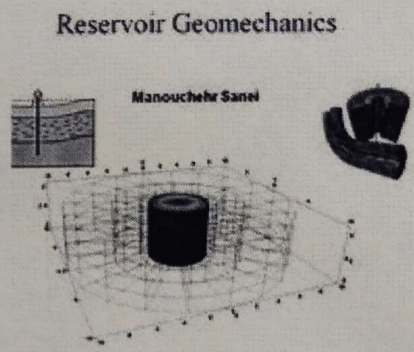
16PSEVC201 - RESERVOIR GEOMECHANICS



- The course is intended for engineers in the petroleum and geothermal industries, and for research scientists interested in stress measurements and their application to problems of faulting and fluid flow in the crust.
- The course considers key practical issues such as prediction of pore pressure, estimation of hydrocarbon column heights and fault seal potential, determination of optimally stable well trajectories, casing set points and mud weights, changes in reservoir performance during depletion, and production-induced faulting and subsidence.

Date: 23.01.2017 to 28.01.2017

Venue : T225

Course Incharge:

Mr.S.Balamurugan AP/Civil

16PSEVC201 **RESERVOIR GEOMECHANICS**

COURSE OBJECTIVES

To enable the students to

- Understand the concepts of hydrocarbon plant design

Basic Principles- The tectonic stress field -Pore pressure at depth in sedimentary basins- Basic constitutive laws- Rock failure in compression, tension and shear - Fractures and faults in three dimensions- Measuring Stress Orientation and Magnitude- Compressive and tensile failures in vertical wells - Determination of S3 from mini fracs and extended leak-off tests and constraining the magnitude of SHmax from wellbore failures in vertical wells- Wellbore failure and stress determination in deviated wells - Stress fields – from tectonic plates to reservoirs around the world –Applications - Minimizing wellbore instability- Critically stressed faults and fluid flow- Reservoir depletion

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- estimate of hydrocarbon column heights and fault seal potential

TEXT BOOKS

Value Added Course

16PSEVC301 - CONNECTIONS IN STEEL STRUCTURES

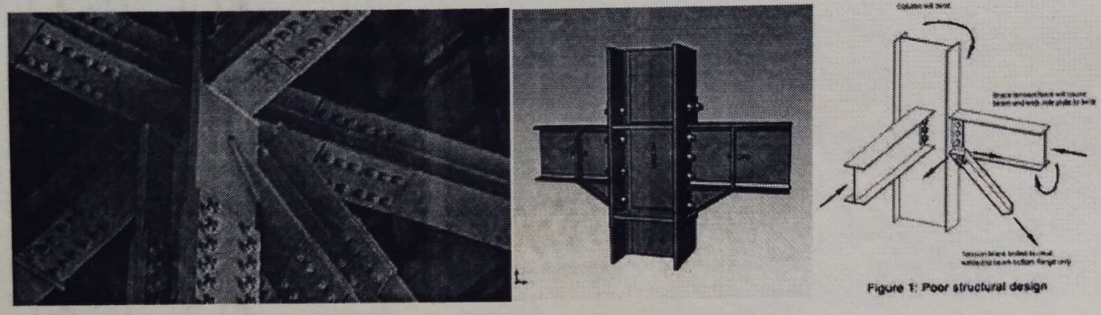

Figure 1: Poor structural design

- This course will cover fundamental concepts and applications of connections in the design of steel buildings and bridges with emphasis on simple shear and moment connections between steel beams and columns in frame systems.
- The course also discuss the topics such as design simple connections using standard AISC approaches, evaluation of eccentrically loaded bolt and weld groups using elastic and ultimate strength approaches and the concept of special provisions for moment and concentrated forces connections.

Date: 27.06.2016 to 01.07.2016

Venue : T226

Course Incharge:

Mr.M.Manojkumar AP/Civil

16PSEVC301 **CONNECTIONS IN STEEL STRUCTURES**

COURSE OBJECTIVES

To enable the students to

- Understand how to design steel connections for any combination of axial, shear, and moment loads is fundamental to effective building design.

Connection Design Review - Bolted Connections Review bolted connection basics including force transfer mechanisms, bolt shear and bearing, and slip critical connections.

Connection Design Review – Welded Connections Review welded connection basics including types of welding, AISC360 provisions for fillet welds, and weld limit states. Eccentrically Loaded Bolts – Elastic Method - Introduce eccentrically loaded connections and detail the elastic design method for eccentrically loaded bolt groups. Eccentrically Loaded Bolts – Ultimate Strength Methods

Introduce the ultimate strength method for eccentric design and contrast it to the elastic method. Develop design tools to calculate the strength of an eccentrically loaded bolted connection.

Eccentrically Loaded Welds – Elastic Method

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply the design concepts in realistic design scenarios.

EMOTIONAL INTELLIGENCE

COURSE OBJECTIVES

To enable the students to

Know the concept of Emotional Intelligence & Emotional Quotient.

Learn the concept, causes and consequences of stress management.

Learn the correlate of Emotional Intelligence. Introduction to emotions & emotional intelligence

COURSE CONTENT

Concept & theory of intelligence & wisdom- Measurement and applications of intelligence- Types & Determinants of Emotions- Emotional intelligence: concept, theory and measurement- Correlates of emotional intelligence, Theories of Emotional Intelligence- Emotional intelligence, culture and happiness - EQ mapping for enhancing emotional intelligence- Managing stress, suicide prevention, through emotional intelligence- Spirituality and Meditation Application of emotional intelligence in family and workplace

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Map the Emotional Quotient of individuals
- Manage stress and control stress in the official & domestic set up
- Apply Emotional Intelligence in all social transactions

16BAVC201 COMMUNICATION SKILLS

COURSE OBJECTIVES

to enable the students to

- Familiarise with the factices of verbal commutation
- Learn the art of writing report
- Acquire the skills to appear for interviews

COURSE CONTENT

The Basics of Communication - Social Skills - Preparing Portfolio - Preparing Resume Vs Curriculum Vitae - The Job Interview - Presentation Skills - Telephone Skills - Group Discussion - BodyLanguage - Writing Skills: Some Basic Guidelines - Basic Features of Proposals - Writing Reports- time management – resource management- business communication- jam- group discussion- group discussion level 1- group discussion level 2.

TOTAL PERIODS – 30

COURSE OUTCOMES

At the end this course, students will be able to

- Communicate freely with confidence
- Independently Prepare written report in the work setup
- Gain an edge in the job interview

TEXT BOOKS :

SQL FUNDAMENTALS

VALUE ADDED COURSE

ABOUT THE COURSE:

- **SQL** is a standard language for accessing and manipulating databases
- **SQL** can execute queries against a database
- **SQL** can retrieve data from a database
- **SQL** can insert records in a database
- **SQL** can update records in a database
- **SQL** can delete records from a database
- **SQL** can create new databases
- **SQL** can create new tables in a database
- **SQL** can create stored procedures in a database
- **SQL** can create views in a database

COURSE OUTCOMES:

At the end this course, students will be able to

- understand the concept of row and column data from tables with the SELECT statement
- analyze reports of sorted and restricted data
- **i**mplement SQL functions to generate and retrieve data and schema

DATE & VENUE :

12.12.2016 to 16.12.2016, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Mrs. Diplai Sinha, AP/MCA

16CAVC101 **SQL FUNDAMENTALS**

COURSE OBJECTIVES

To enable the students to

- retrieve the row and column data from tables with the SELECT statement
- create reports of sorted and restricted data
- employ SQL functions to generate and retrieve customized data and schema

UNIT 1 Introduction

Introduction - Retrieving Data Using the SQL SELECT Statement -Restricting and Sorting Data - Single-Row Functions to Customize Output - Conversion Functions and Conditional Expressions

UNIT 2 Queries

Reporting Aggregated Data Using the Group Functions - Displaying Data from Multiple Tables - Sub-queries - SET Operators - Manipulating Data

UNIT 3 DDL Statements

Manipulating Data - DDL Statements to Create and Manage Tables - Schema - Creating Other Schema Objects.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- understand the concept of row and column data from tables with the SELECT statement
- analyze reports of sorted and restricted data
- implement SQL functions to generate and retrieve customized data and schema

TEXT BOOKS

1. SQL Fundamentals (3rd Edition) 3rd Edition, Kindle Edition

WEB DEVELOPMENT

VALUE ADDED COURSE

ABOUT THE COURSE:

- A **website** can be defined as a collection of several webpages that are all related to each other and can be accessed by visiting a homepage, using a browser like Internet Explorer, Mozilla, Google Chrome or Opera.
- It will explain the concept of **website** development, from the simplest to the most advanced.
- It will help novice users to learn all about **websites** and how they are designed and maintained.

COURSE OUTCOMES:

At the end this course, students will be able to

- identify the HTML, DHTML concepts
- implement a variety of presentation effects in HTML
- explore about appropriate client-side applications

DATE & VENUE :

12.12.2016 to 16.12.2016, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Miss.S.Soundaryaroja, AP/MCA

Miss.K.Thamaraiselvi, AP/MCA

16CAVC201 WEB DEVELOPMENT

COURSE OBJECTIVES

To enable the students to

- learn about HTML, DHTML concepts
- understand the variety of presentation effects in HTML
- know about appropriate client-side applications and the Knowledge of XML, PHP

UNIT I HTML, Frames and Forms

History of the Internet and World Wide Web – HTTP, SMTP, POP3, MIME, Understanding roles of Web Browsers and Web Servers. Structure of HTML, Text formatting, Text styles, hyper link, image, and tables. **Frames, Forms** : CSS Frames, Forms and controls, Embedding audio, video and animated files in HTML, CSS –Understanding CSS, Internal CSS, External CSS, Font Properties, Text Properties, Color and Background properties, Table properties, Numbering and List Properties.

UNIT II Java Script

Data types and literals, operators, conditional statements, loop constructs, reserved words; core Objects Array Object, Date Object; Functions passing value to JavaScript functions, user defined functions, Handling old browsers , java script events, formatting cookie, retrieving cookie value from the cookie file, removing a cookie, animations using events.

UNIT III PHP & MySQL

Why PHP and MySQL - Server-Side Web Scripting - Getting Started with PHP - Adding PHP to HTML -Syntax and Variables - Control and Functions - Passing Information between Pages – Strings – Arrays and Array Functions – Numbers - MySQL Database Administration - PHP/MySQL Functions - Displaying Queries in Tables - Building Forms from Queries

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- identify the HTML, DHTML concepts
- implement a variety of presentation effects in HTML
- explore about appropriate client-side applications

PROGRAMMING WITH PHP

VALUE ADDED COURSE

ABOUT THE COURSE:

- The **PHP Hypertext Preprocessor (PHP)** is a programming language that allows web developers to create dynamic content that interacts with databases. PHP is basically used for developing web based software applications. This tutorial helps you to build your base with PHP.
- **PHP** started out as a small open source project that evolved as more and more people found out how useful it was.
- **PHP** is a MUST for students and working professionals to become a great Software Engineer especially when they are working in Web Development Domain.

COURSE OUTCOMES:

At the end this course, students will be able to

- explain about concept of PHP
- analyse the concept of web designing
- implement creating of database in PHP

DATE & VENUE :

27.06.2016 to 01.07.2016, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Miss.M.Kalaivani, AP/MCA

Miss.J.Valarmathi, AP/MCA

16CAVC301 PROGRAMMING WITH PHP

COURSE OBJECTIVES

To enable the students to

- understand about concept of PHP
- learn the concept of web designing
- be familiar with creating of database in PHP

UNIT I Core PHP

Introduction to PHP-Handling Html Form With Php-Decisions and loop-Function-String-Working with file and Directories

UNIT II Web Designing

HTML- CSS- Java Script- JQuery- AJAX

UNIT III Framework- Cake PHP

Introduction to CakePHP- Models: Creating up model for a database table- Controller: Creating controller- Views: Creating Views- Cake session:

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- explain about concept of PHP
- analyze the concept of web designing
- implement creating of database in PHP

DEPARTMENT OF SCIENCE AND HUMANITIES

VALUE ADDED COURSE

16GEVC101/201-INTRODUCTION OF GENDER STUDIES

About The Course:

This course will attempt to explore, challenge and rethink gender as a conceptual category, a cultural practice and a key concern in literary and other artistic representation. Gender studies asks what it means to make gender salient, bringing a critical eye to everything from labor conditions to healthcare access to popular culture. Gender is never isolated from other factors that determine someone's position in the world, such as sexuality, race, class, ability, religion, region of origin, citizenship status, life experiences, and access to resources. Beyond studying gender as an identity category, the field is invested in illuminating the structures that naturalize, normalize, and discipline gender across historical and cultural contexts.

INTENDED AUDIENCE:

- All the First year B.E., B.Tech students

Date: 22-08-2016 to 26-08-2016

Venue:

1.T403 (Drawing Hall) 2.T218(Drawing Hall) 3.M206 (Drawing Hall) 4.AB301 (Drawing Hall) 5.AB006(Lecture Hall) 6. AB007 (Lecture Hall) 7. AB103 (Lecture Hall) 8. AB104 (Lecture Hall) 9. AB105 (Lecture Hall) 10. AB106 (Lecture Hall).

16GEVC101/201 **INTRODUCTION OF GENDER STUDIES**

COURSE OBJECTIVES

To enable the students to

- introduce basic concepts relating to gender and to provide logical understanding of gender roles
- trace the evolution of gender studies from women's studies
- enable them to engage in policy decisions to remove gender biases in all fields of life in the process of gender equality for nation building

MODULE 1: Introduction

Sex and Gender, Types of Gender, Gender roles and Gender division of Labour, Gender stereotyping and Gender Discrimination

MODULE 2: Social Construction of Feminity

Bio-Social perspective of Gender, Gender as Attribution fact , Essentialism in the construction of feminity, Challenging cultural notions of feminity, images of women in sports, arts , entertainment and fashion industry, media and feminine identities

MODULE 3: Women's studies and Gender studies

Evaluation and scope of women's studies, from women's to gender studies: A Paradigm shift, Women's studies VS Gender studies

TOTAL PERIODS 30

COURSE OUTCOMES

Students must gain knowledge on

- The concepts relating to gender and gains the logical understanding of gender roles
- Familiarize the evolution of gender studies from women's studies
- the removal of gender biases in all fields of life in the process of gender equality for nation building

16GEVC101/201 CONSTITUTION OF INDIA

COURSE OBJECTIVES

To enable the students to

- assimilate and get familiarized with basic information about Indian constitution
- aware of the functional aspects of the local Administration System.
- understand human rights/ values and its implications in their life.

MODULE- 1 : INTRODUCTION ABOUT INDIAN CONSTITUTION

Definition, historical back ground, features, preamble, territory, citizenship.

MODULE 2 : CONSTITUTIONAL RIGHTS & DUTIES

State, fundamental rights, directive principles, duties.

MODULE 3 : UNION AND STATE PROVISIONS

The machinery of the union government , Government machinery in the states, The federal system, Statutory Institutions, miscellaneous provisions

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics
- Familiarize with the various levels of local administration.
- Gain knowledge on election commission of India

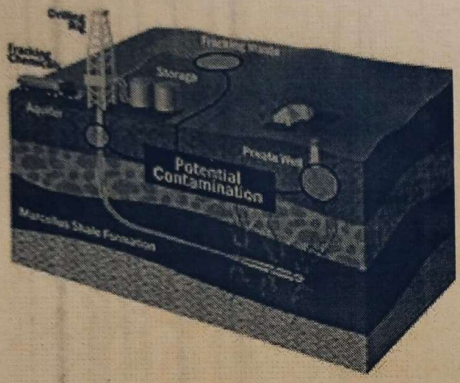
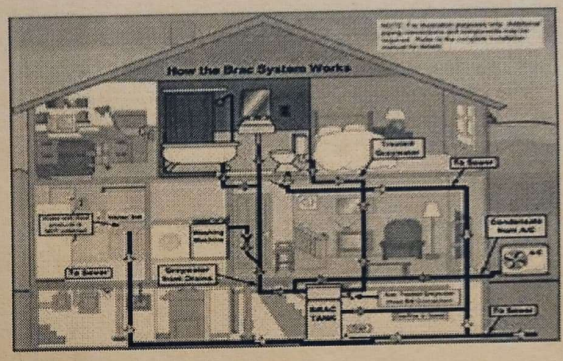
15CEVC301 - POLLUTANTS AND WATER SUPPLY





- This course has emphasizes on pollutants and water supply aspects within the broad subject area of waste water management and water supply engineering.
- Sustainable management of sewage covering all sources and all aspects, covering generation, collection, criteria analysis, treatment, storage, distribution network analysis and design. This course cover other topics like water collection systems, water quality analysis and principles of water supply systems also in detail.

Date:22.6.2015 to 26.6.2015

Venue: T225

Course Co-ordinator:

1. Mr.V.Karthik AP/Civil
2. Mr.P.Vignesh AP/Civil
3. Mr.J.Doraikkannan AP/Civil

15CEVC301 **POLLUTANTS AND WATER SUPPLY**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on pollutants in air, land & water
- understand the concepts of water softening & distribution
- acquire knowledge on analysis & design of distribution network

Module I

Pollutants and their Effects - Air pollution –Land Pollution - Water Pollution - Water Quality-Criteria & Analysis - Water Requirements - Sources and Collection of Water - Overview of Purification and Pre-Treatment - Theory and Design of Sedimentation

Module II

Theory and Design of Filtration - Theory and Design of Disinfection - Water Softening and Specific Treatments- Storage and Distribution Reservoirs

Module III

Pumps and Pumping Requirements, Valves and Appurtenances - Hydraulic Considerations and Design - Distribution Network-Analysis and Design

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply field procedure on testing pollutants
- calculate the water distribution quantity
- design the distribution network

TEXT BOOKS

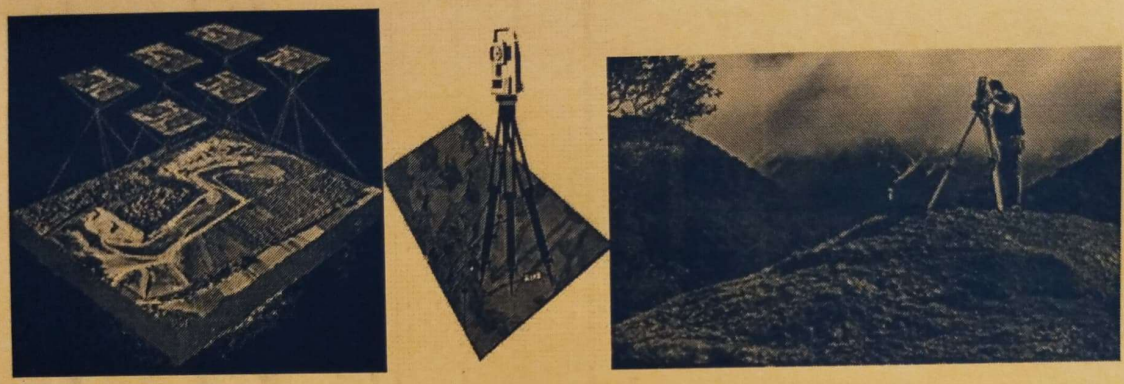
15CEVC401 - DIGITAL LAND SURVEYING AND MAPPING



- This course has emphasizes on Digital land surveying with GPS and Mapping software aspects within the broad subject areas of Digital land surveying.
- The objective of the course is to provide basics of digital surveying and mapping of earth surface using total station, GPS and mapping software. It deals with data reduction, digital surveying procedure and mapping of an area

Date : 1.12.2015 to 5.12.2015

Venue : T229

Course Incharge:

1.Mr.S.Prabakaran AP/Civil

2.Mr.A.Jayapal AP/Civil

3. Mrs.K.Sharmiladevi AP/Civil

15CEVC401 **DIGITAL LAND SURVEYING AND MAPPING (DLS&M)**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on digital surveying
- understand the concepts of modern digital land surveying & its application
- learn the applications of digital survey

Module I

Fundamentals of Land Surveying & GPS - Global Positioning System (GPS) - TOTAL STATION(TS)

Module II

TS & DIGITAL LAND SURVEYING (DLS) - DLS& DIGITAL MAPPING (DM) – Applications

Module III

DM & DIGITAL DATA MANIPULATION (DDM) - DIGITAL LAND SURVEYING AND MAPPING (DLS&M) – Applications in Civil Field

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply digital instrument in land surveying
- calculate the area & volume by modern digitalized surveying equipment
- apply the digital data manipulation in civil field

TEXT BOOKS

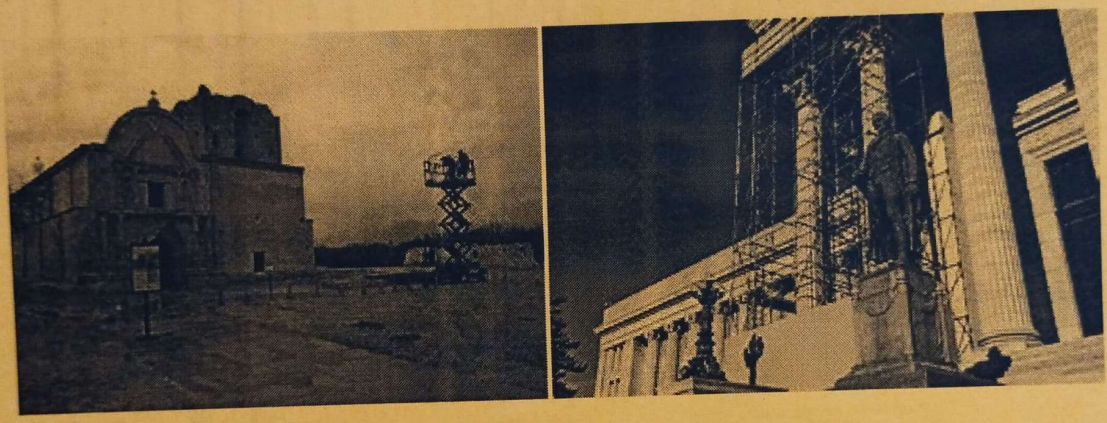
15CEVC601 - ARCHITECTURAL CONSERVATION AND HISTORIC CONSERVATION



- This course is designed to address historic preservation and conservation as an approach that establishes a link between past, present and future.
- The course discusses about the various types of heritage, and participants are introduced to international framework of conservation and world heritage scenario. Guidelines for preservation, conservation and restoration of heritage structures and process of impact assessment is discussed with case studies.

Date:1.12.2015 to 5.12.2015

Venue:T225

Course Incharge:

1.Mr.P.KalaimuthuAP/Civil

2.Ms.S.Subathra AP/Civil

3.Mr.J.Rajkumar AP/Civil

15CEVC601 ARCHITECTURAL CONSERVATION AND HISTORIC PRESERVATION

COURSE OBJECTIVES

To enable the students to

- gain knowledge on architectural conservation & its heritage

Module I

Course overview and introduction - heritage conservation- need, debate and purpose; understanding heritage and types of heritage resources, Significance and value assessment, approaches of conservation. Divergent approaches and ethics of conservation; history of conservation movement; concepts and definitions; international agencies like ICCROM, UNESCO and their role in conservation- World Heritage Sites, selection criteria, authenticity and integrity, case studies, endangered sites.

Design of new building in historic settings- townscape analysis , visual integration; heritage impact assessment - adaptive reuse of heritage structures - organisational framework and heritage site management ,financial incentives and planning tools- role of agencies in safeguarding heritage in India

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply the concept townscape in design of new building in historic places

Value Added Course

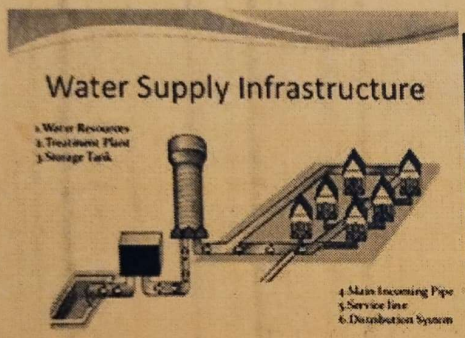
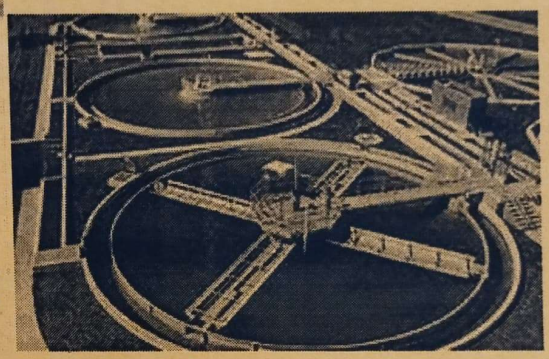
15CEVC801 - WATER SUPPLY AND ITS TREATMENT





- Water supply schemes are a basic necessity of every town/city. With growing concerns over managing urban water demands along with resource sustainability, concept of efficient and smart urban water supply systems is progressively getting more pertinent.
- The course topics include cost-effective treatment solutions, automated supervisory controls, leakage detection and control etc and the technical aspects of modern systems for drinking water treatment and distribution in an integrated way.

Date: 1.12.2015 to 5.12.2015

Venue : T225

Course Incharge:

1.Mr.R.Nagarajan AP/Civil

2.Mrs.K.Sharmiladevi AP/Civil

3.Mr.A.Jayapal AP/Civil

15CEVC801 **WATER SUPPLY AND ITS TREATMENT**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on pollutants in air, land & water
- understand the concepts of water softening & distribution
- acquire knowledge on pumps requirements for distribution

Module I

Pollutants and their Effects - Air pollution –Land Pollution - Water Pollution - Water Quality-Criteria & Analysis - Water Requirements - Sources and Collection of Water - Overview of Purification and Pre-Treatment - Theory and Design of Sedimentation

Module II

Theory and Design of Filtration - Theory and Design of Disinfection - Water Softening and Specific Treatments- Storage and Distribution Reservoirs

Module III

Pumps and Pumping Requirements, Valves and Appurtenances - Hydraulic Considerations and Design - Distribution Network-Analysis and Design

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply field procedure on testing pollutants
- calculate the water distribution quantity
- apply design concepts of distribution network

TEXT BOOKS

1. Water Supply Engineering by Dr. B.C. Punmia, Ashok Kr. Jain and Arun K Jain, 2005

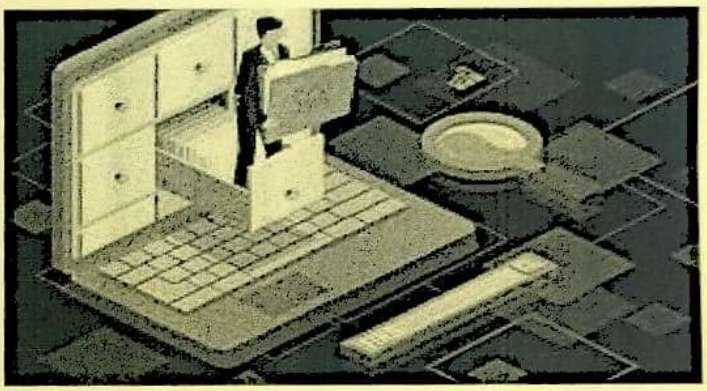
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Value Added Course

15CSVC301 - SQL FUNDAMENTALS

SQL is a standard language for storing, manipulating and retrieving data in databases. Our SQL tutorial will teach you how to use SQL in: MySQL, SQL Server, MS Access, Oracle, Sybase, Informix, Postgres, and other database systems



SQL stands for Structured Query Language. It is used for storing and managing data in relational database management system (RDMS). It is a standard language for Relational Database System. It enables a user to create, read, update and delete relational databases and tables.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to know how to store and fetch data in the database efficiently by using Structured query language(SQL)

Date: 22.06.2015 - 26.06.2015

Venue: Class Room No: Computer Lab II

COURSE CO-ORDINATOR

R. Balamurugan, AP/CSE
M.Sivaranjini, AP/CSE

15CSVC301 **SQL FUNDAMENTALS**

COURSE OBJECTIVES

To enable the students to

- Retrieve row and column data from tables with the SELECT statement
- Create reports of sorted and restricted data
- Employ SQL functions to generate and retrieve customized data and schema.

UNIT I

Introduction - Retrieving Data Using the SQL SELECT Statement -Restricting and Sorting Data - Single-Row Functions to Customize Output - Conversion Functions and Conditional Expressions

UNIT II

Reporting Aggregated Data Using the Group Functions - Displaying Data from Multiple Tables - Sub-queries - SET Operators - Manipulating Data

UNIT III

Manipulating Data - DDL Statements to Create and Manage Tables - Schema - Creating Other Schema Objects.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the concept of row and column data from tables with the SELECT statement
- Analyze reports of sorted and restricted data
- Implement SQL functions to generate and retrieve customized data and schema.

TEXT BOOKS

1. SQL Fundamentals (3rd Edition) 3rd Edition, Kindle Edition

15CSVC401 - . NET

The .NET Framework is a software framework developed by Microsoft that runs primarily on Microsoft Windows. It includes a large class library called Framework Class Library and provides language interoperability across several programming languages.

It is a free, cross-platform, open source developer platform for building many different types of applications. With . NET, you can use multiple languages, editors, and libraries to build for web, mobile, desktop, games, and IoT.

INTENDED AUDIENCE

- II Year of B.E, B.Tech - Students
- Students able to build several applications with multiple languages and libraries using this .NET framework

Date: 01.12.2015 - 05.12.2015

Venue: Class Room No: 319

COURSE CO-ORDINATOR

Dr. K. Saravanan, Prof/CSE
P.Sandhiya, AP/CSE

15CSVC401 .NET

COURSE OBJECTIVES

To enable the students to

- To understand about the concept of Web technology
- To be familiar with creating of database using ADO.NET.
- To study about ASP.NET

Unit I

Introductions, course mechanics, .NET Overview, CLR, Assemblies (monolithic vs. component-based applications), Execution Model, Client-Side vs. Server-Side Programming, Web Technologies. Development Environment Setup, ISS, SQL Server and Visual Studio, Advanced C#: OOP, Delegates, Events, Attributes, unsafe code, .NET Interop

Unit II

.NET Framework Class Library (FCL): System, Collections, I/O, Networking, Threading, Transactions, Exceptions. Databases and Data Access using ADO.NET & LINQ.

Unit III

Introduction to ASP.NET, programming model, server controls, data binding-ASP.NET state management, tracing, caching, error handling, security, deployment, user and custom controls, DotNetNuke. Exposing and consuming ASP.NET Web Services, XML, RESTful, SOAP, DISCO, UDDI

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- understand the concept of Web technology
- Implement creating of database using ADO.NET.
- Analyze about ASP.NET

TEXT BOOKS

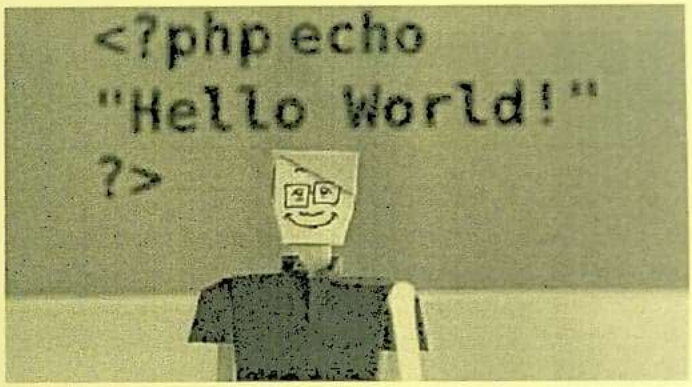
15CSVC501 - PHP

PHP (Hypertext Preprocessor) is known as a general-purpose scripting language that can be used to develop dynamic and interactive websites. It was among the first server-side languages that could be embedded into HTML, making it easier to add functionality to web pages without needing to call external files for data.



It is used to manage dynamic content, databases, session tracking, even build entire e-commerce sites. It is integrated with a number of popular databases, including MySQL, PostgreSQL, Oracle, Sybase, Informix, and Microsoft SQL Server.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to learn the server side language that are used in variety of applications such as web development, web and mobile application development etc.,

Date: 22.06.2015 - 26.06.2015

Venue: Class Room No: 317

COURSE CO-ORDINATOR

N. R. Vikram, AP/CSE
P.Prabaharan, AP/CSE

15CSVC501 **PHP**

COURSE OBJECTIVES

To enable the students to

- To Understand about concept of PHP
- To learn the concept of web designing
- To be familiar with creating of database in PHP.

Unit I Core PHP

Introduction to PHP-Handling Html Form With Php-Decisions and loop-Function-String-Working with file and Directories

Unit II Web Designing

HTML- CSS- Java Script- JQuery- AJAX

Unit III Framework- Cake PHP

Introduction to CakePHP- Models: Creating up model for a database table- Controller: Creating controller- Views: Creating Views- Cake session:

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Explain about concept of PHP
- Analyze the concept of web designing
- Implement creating of database in PHP.

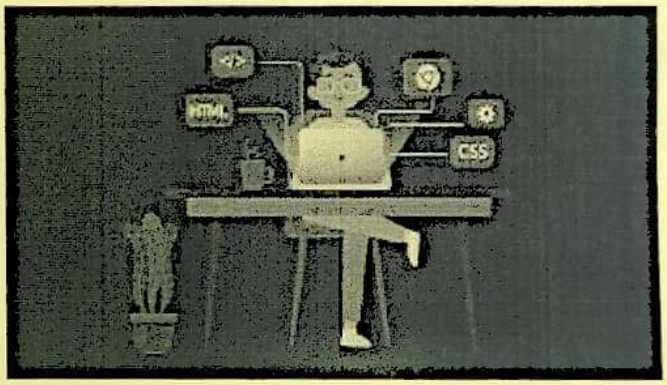
15CSVC601 - WEB DEVELOPMENT

Web development is the work involved in developing a Web site for the Internet (World Wide Web) or an intranet (a private network). ... Web development may use content management systems (CMS) to make content changes easier and available with basic technical skills.



Website development is a way to make people aware of the services and/or products you are offering, understand why your products are relevant and even necessary for them to buy or use, and see which of your company's qualities set it apart from competitors.

INTENDED AUDIENCE

- III Year of B.E, B.Tech - Students
- Students able to construct web applications and websites using the frontend and backend tools

Date: 01.12.2015 - 05.12.2015

Venue: Class Room No: 318

COURSE CO-ORDINATOR

R. Dhivya, AP/CSE
T. Ambiga AP/CSE

15CSVC601 **WEB DEVELOPMENT**

COURSE OBJECTIVES

To enable the students to

- learn about HTML, DHTML concepts.
- Understand t a variety of presentation effects in HTML
- know about appropriate client-side applications and the Knowledge of XML, PHP.

Unit I HTML, Frames and Forms

History of the Internet and World Wide Web – HTTP, SMTP, POP3, MIME, Understanding roles of Web Browsers and Web Servers. Structure of HTML, Text formatting, Text styles, hyper link, image, and tables. **Frames, Forms** : CSS Frames, Forms and controls, Embedding audio, video and animated files in HTML, CSS –Understanding CSS, Internal CSS, External CSS, Font Properties, Text Properties, Color and Background properties, Table properties, Numbering and List Properties.

Unit II JavaScript

Data types and literals, operators, conditional statements, loop constructs, reserved words; core Objects Array Object, Date Object; Functions passing value to JavaScript functions, user defined functions, Handling old browsers , java script events, formatting cookie, retrieving cookie value from the cookie file, removing a cookie , animations using events.

Unit PHP & MySQL

Why PHP and MySQL - Server-Side Web Scripting - Getting Started with PHP - Adding PHP to HTML -Syntax and Variables - Control and Functions - Passing Information between Pages – Strings – Arrays and Array Functions – Numbers - MySQL Database Administration - PHP/MySQL Functions - Displaying Queries in Tables - Building Forms from Queries

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- ldentify about HTML, DHTML concepts.

- implement a variety of presentation effects in HTML
- Explore about appropriate client-side applications and the Knowledge of XML, PHP.

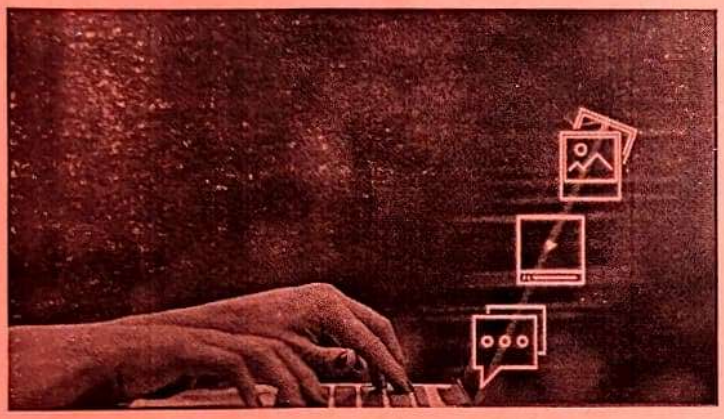
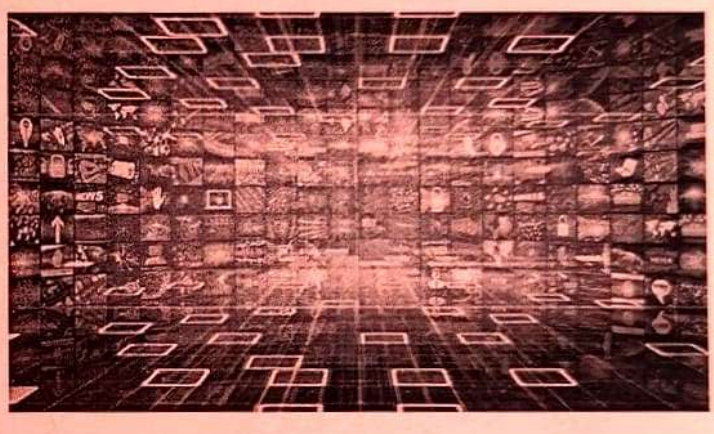
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Training Course

MULTIMEDIA

Multimedia means that computer information can be represented through audio, video, and animation in addition to traditional media (i.e., text, graphics drawings, images). ... Hypermedia can be considered as one of the multimedia applications.





Multimedia motivates students to learn more languages through audio, visual and animation support. It also helps create English contexts since an important aspect of learning a language is developing their grammar, vocabulary and knowledge of pragmatics and genres.

INTENDED AUDIENCE

- IV Year of B.E, B.Tech - Students
- Students able to represent the computer information through audio, video and animation

Date: 22.06.2015 - 26.06.2015

COURSE CO-ORDINATOR

Ms. T. Ambiga, AP/CSE

15CSVC701 MULTIMEDIA

COURSE OBJECTIVES

To enable the students to

- To understand about Animation and special effects.
- To know about digital photography
- To understand about various concept of photoshop

Unit I Introduction to Multimedia

Multimedia Hardware- Software. Desktop publishing, Multimedia Animation & Special effects (2D/3D animation). Social Networking & Publishing (Blogging, Facebook, Youtube, Instagram etc.) Content Distribution Systems (CD/DVD, Internet, Radio, Television)

Unit II Art & Science of Multimedia

Audio fundamentals (Audio quality, formats and devices), Understanding Image and Video (Resolution, Color, Video standards, formats). Film and Digital photography (technology, techniques, composition & lighting etc.). Introduction to Printing technology

Unit III Photoshop

Introduction Vector Shapes and Bitmaps - Explore the Photoshop Environment - Using the File Browser Basic Photo Corrections Working with Selections - Layer Basics - Masks and Channels - Retouching and Repairing .Painting and Editing Basic Pen Tool Techniques - Vector Masks, Paths, and Shapes - Advanced Layer Techniques .Creating Special Effects Preparing Images for Two-Color Printing - Composite Images - Creating a Composite Image Creating an Animated GIF -Creating Composite Images Using Photo merge Unit 5: The Finished Product Saving Images for the Web and Creating a Web Gallery - Photoshop Elements Print Options – Basics of Adobe Illustrator – Basics of Acrobat Reader

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Explain about Animation and special effects.

- Identify about digital photography
- Implement various concept of photoshop

TEXT BOOKS

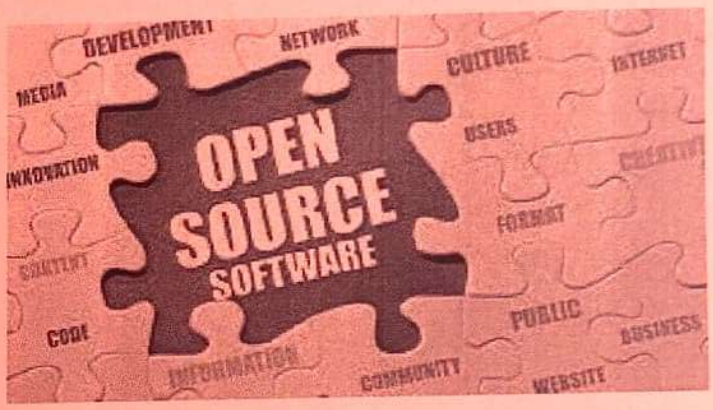
15CSVC801 - FREE AND OPEN SOURCE SOFTWARE

Open source software (OSS) is software that is distributed with its source code, making it available for use, modification, and distribution with its original rights. ... OSS typically includes a license that allows programmers to modify the software to best fit their needs and control how the software can be distributed.



Open source is a type of licensing agreement that allows users to freely modify a work, use said work in new ways, integrate the work into a larger project or derive a new work based on the original.

INTENDED AUDIENCE

- IV Year of B.E, B.Tech - Students
- Students able to the software specifications to best fit thier needs and conrtol how the software can be distributed

Date: 01.12.2015 - 05.12.2015

Venue: Class Room No: Ground Floor CSE Lab

COURSE CO-ORDINATOR

S. Rajesh, AP/CSE
S.Sakthivel,AP/CSE

15CSVC801 FREE AND OPEN SOURCE SOFTWARES (FOSS)

COURSE OBJECTIVES

To enable the students to

- Explain the features of free &open source software and Familiarization with LINUX
- Work with PHP
- Demonstrate the working of MySQL

Unit I Open source software

Features, advantages over proprietary software, examples**, Free software:** concepts, features, Free software Vs Open Source software, Free software movements. Policies, GPL, Free OS, History and Features of Linux, Various flavours of Linux, Linux Kernel and Shell, Graphical Desktops- GNOME, KDE, Linux File System and Directories

Unit II Forms in PHP

Creating a simple input form, combining HTML & PHP code on a single page, redirecting the user ,creating a send mail form, File upload form Cookies: Introduction, setting a cookie with PHP, deleting a cookie, session function overview: starting a session,working with session variables, passing session IDs in the query string, destroying sessions &unsetting variables

Unit III Database concepts:

Open source database software: MySQL features MySQL data types: Numeric,date & time,string Table creation in MySQL:insert,select,where clause,ordering the result,like operator Selecting Multiple tables:using join,using queries Modifying records:update command,replace command,delete command date & time functions in MySQL Interacting with MySQL using PHP:connecting to MYSQL, Executing queries, Retrieving error messages,inserting data with PHP, retrieving data with PHP

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze the features of free &open source software and Familiarization with LINUX
- Implement about Work with PHP

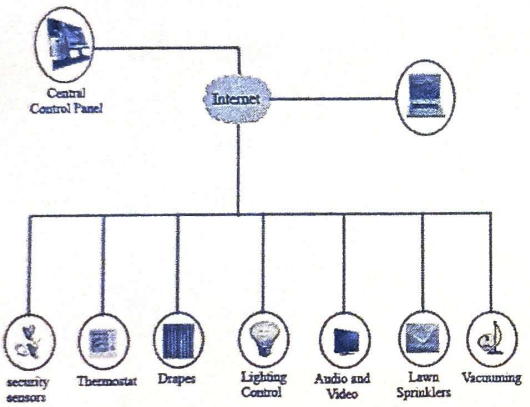
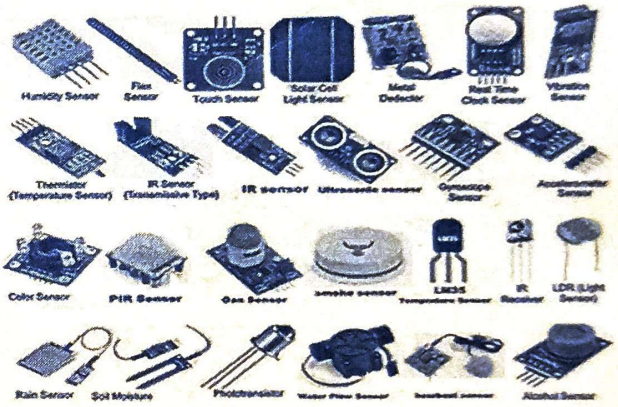
ROLE OF SENSORS AND TRANSDUCERS IN HOME AUTOMATION





Date: 22.06.2015 - 26.06.2015

Course Incharge: Mr. P. John Vivek, AP / ECE

Venue: M213

15ECVC301 ROLE OF SENSORS AND TRANSDUCERS IN HOME AUTOMATION

COURSE OBJECTIVE

To enable the students to

- expertise in various calibration techniques and signal types for sensors.
- understand the working principle of different Transducers.

UNIT I INTRODUCTION AND VARIOUS KINDS OF SENSORS 15

Basics of Sensors-Motion Sensors – Potentiometers, Resolver, Encoders – Optical, Magnetic, Inductive, Capacitive, Synchro – Microsyn, Accelerometer, Range Sensors– RF beacons, Ultrasonic, Ranging, Reflective beacons, Laser Range Sensor (LIDAR). Photo conductive cell, photo voltaic, Photo resistive, LDR – Fiber optic sensors – Pressure – Diaphragm, Bellows, Piezoelectric Thermistor, RTD, Thermocouple. Acoustic Sensors – flow and level measurement sensors- Smart Sensors- Film sensor, MEMS & Nano Sensors.

UNIT II TRANSDUCERS 15

Classification of Transducers, Advantages and Disadvantages of Electrical Transducers, Transducers Actuating Mechanisms, Resistance Transducers, Variable Inductance Transducers, Capacitive Transducers, Piezoelectric Transducers, Hall Effect Transducers, Thermoelectric Transducers, Photoelectric Transducers. Strain gauges, Resistance thermometer, Thermistor, LVDT and RVDT.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students would have

- study the basics of sensor technology and the various sensor technologies for the measurement of Force, Pressure, acceleration, vibration and Torque.
- acquire the Knowledge and Measure different electrical parameters using Transducers.

TEXT BOOK & MANUALS

1. D. Patranabis – “Sensors and Transducers” –PHI Learning Private Limited.
2. Jacob Fraden, “Hand Book of Modern Sensors: physics, Designs and Applications”, 3rd ed., Springer, 2010.

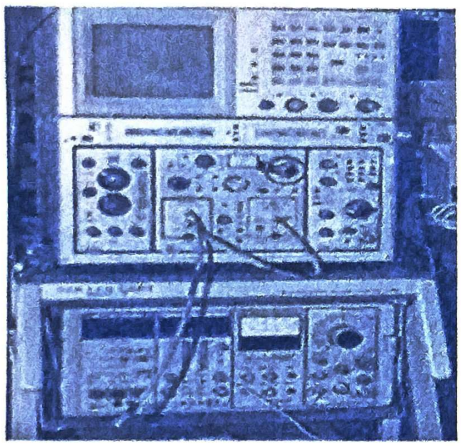
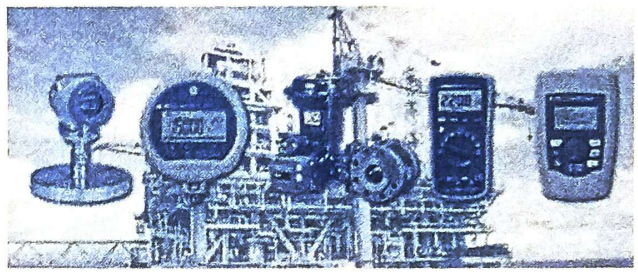
BASIC STANDARDS OF INSTRUMENTS





Date: 01.12.2015 – 05.12.2015

Course Co-ordinator: Mr. A. Kumaravel, ASP / ECE

Venue: M213

15ECVC401 **BASIC STANDARDS OF INSTRUMENTS**

COURSE OBJECTIVE

To enable the students to

- know the necessity of different measuring instruments and their design principle
- understand the working principle of different measuring instruments and technical solutions to handle different errors.

UNIT I PHILOSOPHY OF MEASUREMENT & ANALOG MEASUREMENT OF ELECTRICAL QUANTITIES **15**

Unit & dimensions, standards, Errors, Characteristics of Instruments and measurement system, basics of statistical analysis. PMMC instrument, DC ammeter, DC voltmeter, Ohm meter, Moving Iron instrument, Electro dynamic Wattmeter, errors and remedies, Three Phase Wattmeter, Power in three phase system, Energy meter.

UNIT II MEASUREMENT OF PARAMETERS AND DIGITAL MEASUREMENT **15**

Different methods of measuring low, medium and high resistances**,** measurement of inductance & capacitance with the help of AC Bridges- Wheatstone, Kelvin, Maxwell, Hay's, Anderson, Owen, Campbell, Schering, Wien bridges, Wagner Earthing device, Q Meter. Concept of digital measurement, Digital voltmeter, Frequency meter, Power Analyzer, Electronic, and phase Multimeter. CRT, time base, dual trace oscilloscope Measurement of voltage Measurement of voltage, frequency by CRO, Sampling Oscilloscope, DSO, DSO applications.

TOTAL PERIODS **30**

COURSE OUTCOMES

Upon completion of this course, the students would have

- learn units, dimensions, standards and errors and basics of different types of measuring instruments to measure different electrical quantities.
- measure different electrical parameters using conventional bridges and acquire data through digital measuring instruments and interpret the data.

TEXT BOOK & MANUALS

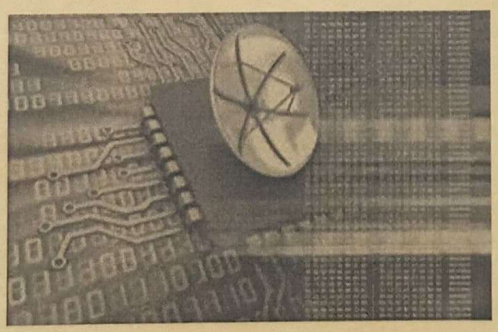
ANTENNA DESIGN USING HFSS



Course Duration:27.06.2016-01.07.2016

Venue: PEC-Temple Tower -T211

Course Coordinator: S.Thinesh AP/EEE

16EEVC301 ANTENNA DESIGN USING HFSS

COURSE OBJECTIVES

To enable the students to

- To know the fundamentals of the antenna.
- Understand the arrays of the antenna.
- To know the fundamentals of the HFSS

UNIT I FUNDAMENTALS OF ANTENNA **10**

Fundamental Theory of antenna: Reciprocity theorem, antenna equivalent circuit, Classification f antennas, Special types of antennas for different frequency bands. Antenna Parameters: Radiation Impedance, Radiation Pattern, Antenna Impedance, Bandwidth, Directivity, Gain, Antenna efficiency, Radiation Efficiency, Antenna Polarization, Antenna Apertures, Antenna temperature ,near-field and far-field concepts, and radiation mechanism.

UNIT II ANTENNA ARRAYS **10**

Two-Element Array N-Element Linear Array: Uniform Amplitude and Spacing N Element Linear Array: Directivity Design Procedure, N Element Linear Array: Three-Dimensional Characteristics, Rectangular-to-Polar Graphical Solution, N-Element Linear Array: Uniform Spacing, Non uniform, Binomial Array Amplitude, Planar and Circular Arrays.

UNIT III INTRODUCTION TO HFSS **10**

The mathematical method used by HFSS, The adaptive solution process and its importance to HFSS, The Six Balanis C.A, "Antenna Theory", 2nd Edition, Wiley, 2003Kyohei Fujimoto, Koichi Ito, Antennas for Small Mobile Terminals,ArtechHouse,2018general steps in HFSS simulation, The three solution types in HFSS, available boundaries with in HFSS, Excitation in HFSS, HFSS Solution setup, HFSS Post Processing

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Fundamentals of the antenna are studied.
- Understood the arrays of the antenna.
- Fundamentals of the HFSS are studied.

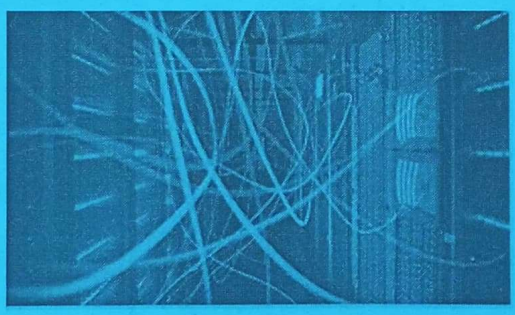
SCIENTIFIC COMPUTING



Course Duration:27.06.2016-01.07.2016

Venue: PEC-Temple Tower -T212

Course Coordinator: R.Elakiya AP/EEE

16EEVC501 SCIENTIFIC COMPUTING

COURSE OBJECTIVES

To enable the students to

- Understand the significance of computing methods, their strengths and application areas.
- To perform the computations on various data using appropriate computation tools.
- To understand the interpolation

UNIT I INTRODUCTION **10**

Introduction: Sources of Approximations, Data Error and Computational, Truncation Error and Rounding Error, Absolute Error and Relative Error, Sensitivity and Conditioning, Backward Error Analysis, Stability and Accuracy

UNIT II SYSTEM OF LINER EQUATIONS **10**

System of liner equations: Linear Systems, Solving Linear Systems, Gaussian elimination, Pivoting, Gauss-Jordan, Norms and Condition Numbers, Symmetric Positive Definite Systems and Indefinite System, Iterative Methods for Linear Systems

UNIT III INTERPOLATION **10**

Interpolation: Purpose for Interpolation, Choice of Interpolating, Function, Polynomial Interpolation, Piecewise Polynomial Interpolation. Numerical Integration And Differentiation: Quadrature Rule, Newton-Cotes Rule, Gaussian Quadrature Rule, Finite Difference Approximation.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the significance of computing methods, their strengths and application areas.
- Perform the computations on various data using appropriate computation tools.
- Interpolation is studied and applied for various applications.

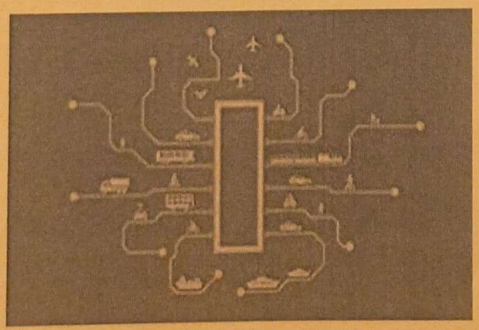
TRANSPORT SAFETY

Course Duration:12.12.2016-16.12.2016

Venue: PEC-Temple Tower -T212

Course Coordinator: P.Elakiya AP/EEE



16EEVC601 TRANSPORT SAFETY

COURSE OBJECTIVES

To enable the students to

- To provide the students about the various activities/steps to be followed in safe handling the hazardous goods transportation from one location to another location.
- To educate the reasons for the road accident and the roles and responsibilities of a safe Driver and the training needs of the driver.
- To inculcate the culture of safe driving and fuel conservation along with knowing of basic traffic symbols followed throughout the highways.

UNIT I TRANSPORTATION OF HAZARDOUS GOODS **10**

Transport emergency card (TREM) – driver training-parking of tankers on the highways speed of the vehicle –warning symbols – design of the tanker lorries -static electricity, responsibilities of driver – inspection and maintenance of vehicles-check list- loading and decanting procedures – communication.

UNIT II ROAD TRANSPORT **10**

Introduction – factors for improving safety on roads – causes of accidents due to drivers and pedestrians-design,selection, operation and maintenance of motor trucks, preventive maintenance-check lists, motor vehicles act – motor vehicle insurance and surveys.

UNIT III DRIVER AND SAFETY **10**

Driver safety programme – selection of drivers – driver training-tachograph-driving test, driver's responsibility-accident reporting and investigation procedures-fleet accident frequency-safe driving incentives- slogans in driver cabin-motor vehicle transport workers act- driver relaxation and rest pauses – speed and fuel conservation – emergency planning and Hazmat codes.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Know various safety activities undertaken in transporting of hazardous goods.
- Understand the various symbols which are specific to the road safety and could acquire the knowledge on the importance of Motor Vehicle Act and insurance.
- Apply for the safe driving by proper training aids and the procedure involved in accident investigation and emergency planning.

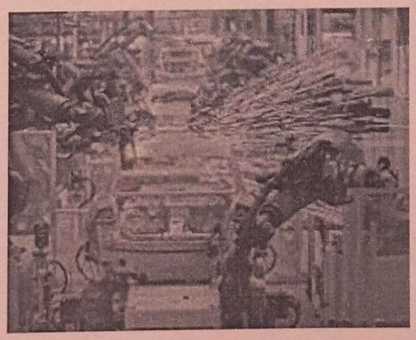
INDUSTRIAL AUTOMATION



Course Duration:13.06.2016-17.06.2016

Venue: PEC-Temple Tower -T213

Course Coordinator: V.Royna Daisy ASP/EEE

16EEVC701 INDUSTRIAL AUTOMATION

COURSE OBJECTIVES

To enable the students to

- This course produces students who can use their multidisciplinary skills to meet growing demand from an industry that is pushing the limits of technology by exploiting the growing convergence of these fields
- The course aims to provide knowledge on fundamentals of robots, robot programming, and its vision system and apply to demonstrate their knowledge in real time application.
- To identify the appropriate configuration for the application.

UNIT I BASIC CONCEPTS **10**

Definition and origin of robotics –different types of robotics–various generations of robots –degrees of freedom – Asimov's laws of robotics – dynamic stabilization of robots.

UNIT II POWER SOURCES AND SENSORS **10**

Hydraulic, pneumatic and electric drives–determination of HP of motor and gearing ratio–variable speed arrangements –path determination –micro machines in robotics–machine vision–ranging –laser – acoustic– magnetic, fiber optic and tactile sensors.

UNIT III MANIPULATORS, ACTUATORS AND GRIPPERS **10**

Construction of manipulators–manipulator dynamics and force control–electronic and pneumatic manipulator control circuits–end effectors–U various types of grippers–design considerations.

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Demonstrate the concepts of robotic principles and various robot configurations.
- Develop solutions for the robot position and orientation for given application.
- Identify the appropriate configuration for the application.

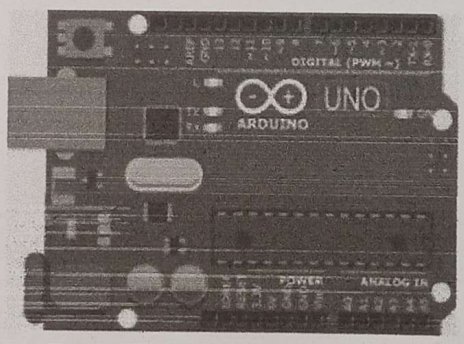
PIC, ARDUINO AND RASPBERRY PI WITH IOT



Course Duration: 12.12.2016-16.12.2016

Venue: PEC-Temple Tower -T213

Course Coordinator: R.Priyanka AP/EEE

16EEVC801 PIC, ARDUINO AND RASBERY PI WITH IOT

COURSE OBJECTIVES

To enable the students to

- explore knowledge on IoT Platform and IO Configurations and Networking of Raspberry Pi
- IoT connectivity using a remote desktop
- Develop and test an IoT weather monitoring station

UNIT I INTRODUCTION TO PIC **10**

Introduction to PIC Family of microcontroller - Architecture of PIC controller Developing - Building and Debugging ALP using MPLAB software.

UNIT II INTERNET OF THINGS & ESP8266 **10**

Architecture of IoT - Application development life cycle in IoT - Esp8266 introduction and programming. Creating HTML webserver: Scanning the available Wi-fi networks - Connecting ESP8266 to Wi-fi Network - Controlling LED via Web Server input.

UNIT III SETTING UP RASPBERRY PI **10**

Interfacing digital sensors with raspberry pi – Making raspberry pi as software defined FM transmitter - Raspberry PI interfacing with Arduino – Web cam interfacing HTML Programming: Creating a webpage to control I/O devices - Reading data from sensor and passing to web page.

TOTAL PERIODS **30**

COURSE OUTCOMES

At the end this course, students will be able to

- Develop the simple program on PIC controller
- Accessing Digital sensor via wi-fi with HTML Web server using ESP866
- Build your computer using Raspberry Pi platform

VALUE ADDED COURSE

ON

15MEVC301-AUTOCAD AND ITS APPLICATION

ABOUT THE COURSE:

This course offers you a basic understanding of the operation of Computer Aided Design (CAD) software. It is ideal for anyone looking for an initial introduction to AutoCAD 2D with an interest in using the software to produce 2D drawings for architectural, engineering or design purposes.

INTENDED AUDIENCE:

- II-, III- and IV-year students those who were interested in Design area.
- Students those interested to know the basic commands and modifying tools in CAD software.
- One who wants to know 2-D modelling.

DURATION OF THE COURSE:

Period: 22.06.2015 to 26.06.2015

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. utilize the power and precision of AutoCAD as a drafting and design tool used in the mechanical design and manufacturing industries.
2. apply basic CAD concepts to develop and construct accurate 2D geometry through creation of basic geometric constructions.

COURSE IN CHARGE:

1. Mr. R.MEIYAZAGAN, AP/MECH, PEC
2. Mr. K.RAJU, AP/MECH, PEC
3. Mr.R.KARTHICK, AP/MECH, PEC

VENUE:
CAD/CAM LAB,
PAAVAI ENGINEERING COLLEGE

Note: Interested students enroll their name to the course in charge on or before 18.06.2015

Scanned by CamScanner

15MEVC301 **AUTOCAD AND ITS APPLICATIONS**

COURSE OBJECTIVES

To enable the students to

- how to organize the drawing within the printing area.
- Write the single text and multi-line text in the drawing.
- make the hatching to provide the sectioning area.

1. **Drawing Templates**
   Using Template Files (.dwt) to Make New Drawing Exploring what Settings and Elements are saved with Templates?
2. **Organizing Your Drawing with Layer and Advanced Object Types**
   Layer States Properties by Layer Layer Tools. Polylines ,Arcs ,Polygons, Ellipses
3. **Advanced Editing Commands and Inserting Blocks**
   Trim and Extend, Fillet and Chamfer, Polyline Edit and Spline, Offset and Explode Join, The Insert Block Command Inserting Blocks with Tool Palettes Dynamic Blocs Migrating Blocks and other Elements between Drawings with Design Center.
4. **Text**
   The Multiline Text Tool the Single Line Text Tool Editing Text Text in Model Space vs. Paper Space the Multilayer Tool
5. **Hatching**
   The Hatch Command The Hatch Editor Ribbon Tab Saving and Applying Hatches with Tool Palettes.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Create the drawing within the printing zone.
- Write the text and hatching in the drawing zone.
- Create the drawing by using advanced tools.

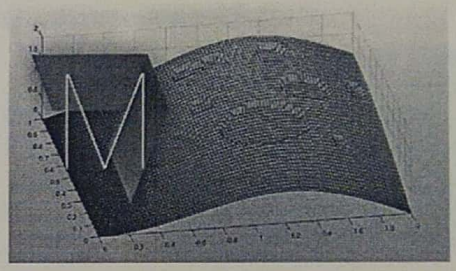
ON

15MEVC401-INTRODUCTION TO MAT LAB

ABOUT THE COURSE:

This course, intended for students with no programming experience, provides the foundations of programming in MATLAB. Variables, arrays, conditional statements, loops, functions, and plots are explained. At the end of the course, students should be able to use MATLAB in their own work, and be prepared to deepen their MATLAB programming skills and tackle other languages for computing, such as Java, C++, or Python.



INTENDED AUDIENCE:

- II-, III- and IV-year students those who were interested in simulation and analysis area.
- Students those interested to know programming techniques in MAT LAB.
- One who wants to know the specific need of MAT LAB in mechanical field.

DURATION OF THE COURSE:

Period: 01.12.2015 to 05.12.2015

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Undertake arithmetic on scalars, vectors and matrices
2. Create 2D and 3D plots of mathematical functions and data
3. Carry out Monte-Carlo simulations

COURSE IN CHARGES:

1. Mr. P.N.MOHANKUMAR,AP/MECH, PEC
2. Mr. R.GUNASEKARAN, AP/MECH, PEC
3. Mr. P.MOHANRAJ, AP/MECH, PEC

15MEVC401 INTRODUCTION TO MAT LAB

COURSE OBJECTIVES

To enable the students to

- know the basic commands.
- Create the simple syntax for making the deferent analysis.
- adapt the concept for their analysis.

1. **Introduction**

   Basic of MATLAB, Types of Window, Types of File, Basic Operations.

2. **Matrix (Array Design)**

   Matrix Operation, Array Design, Array Operation, Multidimensional Array.

3. **Symbolic Calculation**

   Symbols, Design Formula, Differentiation, Integration, Solve Equation

4. **Operators**

   Arithmetic Operator, Logical, Relational, Example for above operators.

5. **Branch and Loop**

   If statement, If-else statement, Else-if statement, Pause, Break, Continue, Switch-case, try-catch, Return Statement For Loop, While Loop

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Open the MAT lab software and use the code and symbols.
- Create simple syntax and making the simple progammes.
- Move, copy and resizing the object by using Tools.

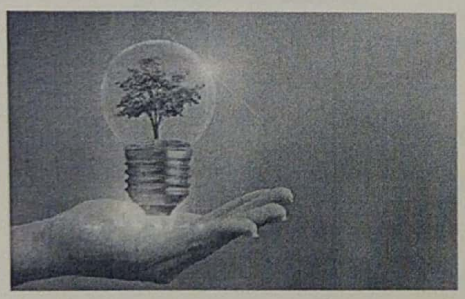
15MEVC501-CONSERVATION OF ENERGY

ABOUT THE COURSE:

This course covers energy sources and the history of energy usage. Examines alternative energy sources and their feasibility. Identifies current energy usage patterns and places where energy can be conserved. Explains how to recognize energy waste, and includes sample corrective actions and maintenance procedures. Explains how to conduct an energy survey. This course has no prerequisites. Energy Conservation Basics is available in online technical training and course manual formats.

INTENDED AUDIENCE:

- II-, III- and IV-year students those who want to know the need of Energy conservation.
- Students interested in knowing various methods of Energy conservation techniques.
- One who wants to know the specific need of conservation of energy for nature.



DURATION OF THE COURSE:

Period: 22.06.2015 to 26.06.2015

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. achieve a clear conceptual understanding of technical and commercial aspects of energy conservation.
2. develop managerial skills to assess feasibility of alternative approaches and drive strategies regarding energy conservation.

COURSE IN CHARGE:

1. Mr. P.PARANDAMAN,ASP/MECH, PEC
2. Mr. T.THANGAVEL,AP/MECH,PEC

15MEVC501 CONSERVATION OF ENERGY

COURSE OBJECTIVES

To enable the students to

- know familiar with the energy efficient devices.
- know the various approaches to conserve energy.
- Understand how to approaches efficient energy management.

1. **Energy Conservation and Efficiency**

   Introduction , About Bureau of Energy Efficiency and it's Schemes, Energy Rating , consumption and energy efficient devices Energy Efficiency and its significance

2. **Energy Efficiency in Buildings and Energy Audit**

   ECBC and Tips for Energy Conservation, Definition, objective, types and methodology of Energy Audit

3. **Instrument for Energy Audit**

   Instruments for Energy Audit ,Case studies and Building survey

4. **Cost Benefit Analysis**

   Arithmetic Operator, Logical, Relational, Example for above operators.

5. **Energy and its use**

   Introduction, Types of Renewable Energy Sources ,Electric vehicle

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- differentiate the various energy efficient devices.
- use of various methods Energy conserve methods.
- approach the various Energy management techniques

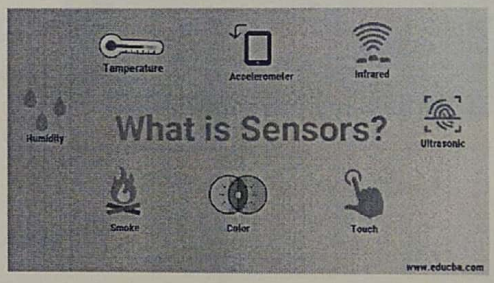
ON

15MEVC601-SENSORS AND ITS USE

ABOUT THE COURSE:

This course introduces the concepts of sensor. It is an electronic device that measures physical attributes such as temperature, pressure, distance, speed, torque, acceleration, etc., from equipment, appliances, machines and any other systems. The sensor produces an electrical signal/optical signal using multiple technologies proportional to the inputs. Sensors are broadly grouped into analog and digital sensors. Analog sensors measure the exact value of physical variables, whereas digital sensors measure the status. Applications classify sensors, Property sensed, Technology used and Systems where they are deployed.



INTENDED AUDIENCE:

- II-, III- and IV-year students those who want to know the fundamentals of sensors.
- Students interested in knowing the operating principles of sensors.
- One who wants to know the specific application of sensors in industries.

DURATION OF THE COURSE:

Period: 01.12.2015 to 05.12.2015

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. understand the principle and application of sensors.
2. understand the specific application of sensors in industries.
3. Classify the sensors based on their specific application.

COURSE IN CHARGE:

1. Mr.R.MOHANRAJ,AP/MECH, PEC
2. Mr.S.A.VENKATESH,AP/MECH,PEC
3. Mr.M.MUTHUKUMAR ,AP/MECH,PEC

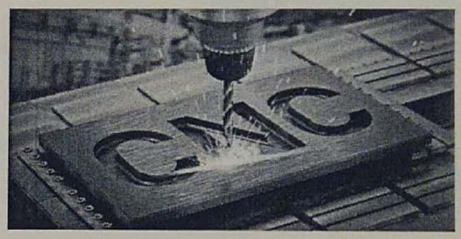
15MEVC701-CNC BASICS

ABOUT THE COURSE:

This course introduces the concepts and capabilities of computer numerical control machine tools. Topics include setup, operation, and basic applications. Upon completion, students should be able to explain operator safety, machine protection, data input, program preparation, and program storage.

INTENDED AUDIENCE:

- II-, III- and IV-year students those wants to know the fundamentals of CNC.
- Those wants to know basics and operation of CNC.
- Those wants to know how to use G-code and M-code for programming.

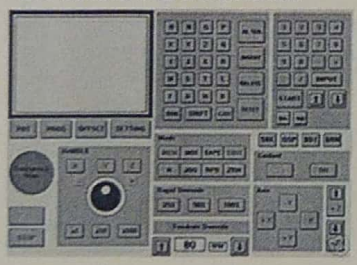


DURATION OF THE COURSE:

Period: 22.06.2015 to 26.06.2015

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:



At the end of this course students can be able to

1. understand the codes (G-code and MCode) used in CNC machines for programming.
2. understand the basics and operation of CNC machine.

15MEVC701 **CNC BASIS**

COURSE OBJECTIVES

To enable the students to

- know the basics of CNC codes and Machine.
- know different Coding for different operations. .
- write the program to various operations.

1. **Fundamentals of process planning**

   Process planning Structure of process plan Factors influencing process plan Sequence of operation of process plan.

2. **CNC systems**

   CAM, NC, CNC and DNC2.2Selection criteria for CNC machines.2.3Adoptive Control.

3. **Constructional Features of CNC machines**

   Classifications of CNC Machine, Modes of operation of CNC,Working of :Machine Structure, Sideways, Spindle drive, Axis drive,

4. **Special features in CNC machines**

   Recirculating ball screw Feedback devices(transducers, encoders), Automatic tool changer (ATC), Automatic pallet changer (APC),CNC axis and motion nomenclature ,CNC tooling's – tool pre-setting, qualified tool, tool holders and inserts

5. **CNC Part Programming**

   Machine zero, home position, work piece zero, programme zero.4.3CNC part programming: Programming format and Structure of part programme.4.4ISO G and M codes for turning and milling-meaning and applications of important codes

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify different axes, machine zero, home position, systems and controls CNC machines.
- Select, mount and set cutting tools and tool holders on CNC
- Prepare part programmes using ISO format for given simple components with and without Use of MACRO, CANNED CYCLE and SUBROUTINE using ISO format.

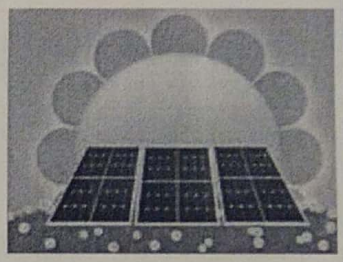
15MEVC801-BASICS OF SOLAR ENERGY

ABOUT THE COURSE:

This course gives you an introduction to the fundamentals of solar power as it applies to solar panel system installations. You will learn to compare solar energy to other energy resources and explain how solar panels, or photovoltaics (PV for short), convert sunlight to electricity.



INTENDED AUDIENCE:

- II-, III- and IV-year students those wants to know the fundamentals of solar energy.
- Those wants design power panels for solar energy production system.
- Those wants to know the difference between various energy system and how solar energy produces electricity.

DURATION OF THE COURSE:

Period: 01.12.2015 to 05.12.2015

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. explain the principles that underlie the ability of various natural phenomena to deliver solar energy
2. outline the technologies that are used to harness the power of solar energy
3. discuss the positive and negative aspects of solar energy in relation to natural and human aspects of the environment.

COURSE IN CHARGES:

1. Mr.P.ELUMALAI, ASP/MECH, PEC

15MEVC801 **BASICS OF SOLAR ENERGY**

COURSE OBJECTIVES

To enable the students to

- Identify the availability of solar energy
- Identify the availability solar collectors
- Know the solar energy resources and panel design

1 **INTRODUCTION**

Sun as Source of Energy, Availability of Solar Energy, Nature of Solar Energy, Solar Energy and Environment

2 **METHODS OF SOLR ENERGY**

Various Methods of using solar energy; Photothermal, Photovoltaic, Photosynthesis, Present & Future Scope of Solar energy

3 **SOLAR COLLECTORS**

Solar collectors- types of collectors; characteristics and design principles of different type of collectors, performance and testing of Collectors

4 **SOCIAL ISSUES**

Sustainable development: Unsustainable to sustainable development – urban problems related to energy

5 **APPLICATIONS**

Solar water and air heaters; performance, and applications; solar cooling; solar Drying; solar ponds; solar tower concept; solar furnace

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Discuss the available solar energy and the current solar energy collectors.
- Identify available solar energy resources and techniques to utilize them effectively.
- Categorize the availability and the conversion method of solar.

COURSE OBJECTIVES

To enable the students to

- learn system requirements and units
- Understand the concepts sketching and part modelling
- familiarize with defining material properties

UNIT 1 INTRODUCTION TO CAE

General working of FEA - Stiffness matrix - Boundary conditions - Elements and Element Shapes - General procedure to conduct FEA.

UNIT 2 INTRODUCTION TO ANSYS WORKBENCH

System requirements - Starting ANSYS Workbench 14.0 - ANSYS Workbench 14.0 GUI - Working on a Project - Units in ANSYS Workbench - ANSYS Workbench Database and File format - Changing the unit system - Components of the system.

UNIT 3 SKETCHING AND PART MODELLING IN DESIGN MODELER

Introduction to Modelling - Introduction to Design Modeler Window - Leaf Spring Section - Gear box housing Section - Air-duct Section

UNIT 4 SOLID MODELLING FUNDAMENTALS

Introduction - Leaf Spring 2D modelling - Gear Box Housing 3D modelling - Air Duct 3D modelling.

UNIT 5 DEFINING MATERIAL PROPERTIES

Introduction to Engineering Workspace - Creating and Adding Materials - Assigning Material to the Beam - Assigning Material to the Clamp - Assigning Material to the Assembly

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Familiarize the requirements and units of ANSYS
- Apply knowledge on sketching and modelling
- Evaluate the material properties.

VALUE ADDED COURSE

15MTVC601 - YOGA FOR HUMAN EXCELLENCE

COURSE CONTENT:

- ✓ YOGA BENEFITS
- ✓ ASANAS AND BALANCE DIET
- ✓ MEDITATION

DATE OF THE COURSE: 1.12.2015 to 5.12.2015

VENUE: T327

COURSE IN-CHARGE

R. KARTHIKEYAN, AP/MCT

A.KALICHARAN, AP/MCT

16MTVC601 YOGA FOR HUMAN EXCELLENCE

COURSE OBJECTIVES

To enable the students to

- know about the history and schools of yoga
- know the difference between supreme consciousness and individual consciousness
- apply the knowledge by the way of practice and introspection

UNIT 1 INTRODUCTION

What is Yoga, History of Yoga - Yoga in today's scenario- Schools of Yoga.

UNIT 2 LIMBS OF YOGA

Eight Limbs of Yoga - Sathvic, Rajasic, Tamasic Foods and Thoughts - Science of Yoga Loosening Exercises.

UNIT 3 YOGA BENEFITS

Yogasanas & Benefits - Super Brain Yoga - Surya Namaskar Standing Asanas.

UNIT 4 ASANAS AND BALANCE DIET

Sitting Asanas - Prone Asanas - Supine Asanas; Nutrition and Balance Diet: Needs and Important, Significant of Nutritional Food - Tips for balance diet. Common Diseases for IT professionals: Common diseases – cause, prevention First aid for common sports injuries

UNIT 5 MEDITATION

Mudras Relaxation- Pranayama – Meditation - Meaning and definition; Principles of practicing; Basic Asana and it important, Pranayama and Meditation - Relaxation Techniques.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the historical aspects and schools of yoga
- Ensure their physical & mental wellness through yoga practice
- Develop the power to concentrate and have stress free mind

TEXT BOOKS

1. Ramesh Partani, The Complete Secret, Ru Education, 2013.

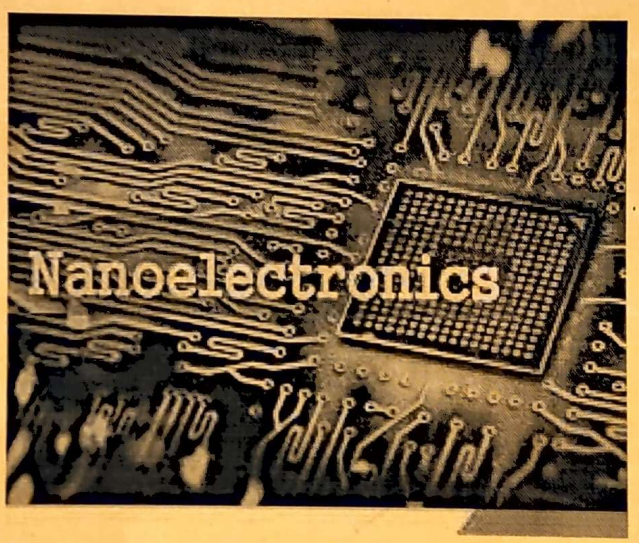
VALUE ADDED COURSE

15MTVC701 - NANO ELECTRONICS

COURSE CONTENT:

- ✓ MOLECULAR NANOTECHNOLOGY
- ✓ NANO ASSEMBLY
- ✓ ARCHITECTURE
- ✓ APPLICATIONS



DATE : 22.6.2015 to 26.6.2015

VENUE: T326

COURSE IN-CHARGE

K. SANTHOSH, AP/MCT

S.MOHANKUMAR, AP/MCT

15MTVC701 **NANO ELECTRONICS**

COURSE OBJECTIVES

To enable the students to

- Have a concept on the scope and recent development of the science and technology of Nano-systems.
- Gain the physical knowledge underlying the operation principles and design of Nano-systems
- Learn some typical or potentially applicable nano-systems at the frontier of the development of the field.

UNIT 1 INTRODUCTION

Nano and nature - physical scales of nano technology - Genealogy and Philosophy of nano technology - Methods of measuring properties - structure - Microscopy - Spectroscopy.

UNIT 2 MOLECULAR NANOTECHNOLOGY

Basics of nano-electronics; Nano electronics with tunnelling devices; super conducting devices; Molecular nanotechnology; Applications of MNT

UNIT 3 NANO ASSEMBLY

Direct self; assembly; device assembly; Electrostatic self; assembly nano tubes; nano wire and carbon 60; Dielectrophoretic nano assembly.

UNIT 4 ARCHITECTURE

Architecture of MEMS; Requirements of nano systems; Development of nano electronics and structuring;

UNIT 5 APPLICATIONS

Application of NEMS; Deposition of coatings; Three dimensional materials; Dewatering.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Ability to understand the operation of nano devices; nano systems and their application
- Ability to design the nano devices; nano systems using the NEMS fabrication process.
- Gain a knowledge of basic approaches for various sensor design

TEXT BOOKS

VALUE ADDED COURSE

15MTVC801 - INTRODUCTION TO WOMEN'S STUDIES

COURSE CONTENT:

- ✓ SOCIAL EMPOWERMENT
- ✓ ECONOMIC EMPOWERMENT
- ✓ POLITICAL EMPOWERMENT
- ✓ SOCIAL ISSUES REGARDING WOMEN

DATE : 1.12.2015 to 5.12.2015

VENUE: T326

COURSE IN-CHARGE

D.R.P. RAJARATHNAM, HOD/MCT

R. CHANDIRAN, AP/MCT

15MTVC801 INTRODUCTION TO WOMEN'S STUDIES

COURSE OBJECTIVES

To enable the students to

- sensitize the participants regarding the issues of gender and the gender inequalities prevalent in society.
- initiate the gender perspective in all domains of understanding Gender Studies with the issues of their daily life.
- introduce gender sensitization and related issues.

UNIT 1 FUNDAMENTAL CONCEPTS OF WOMEN'S STUDIES

Definition- Objectives of Women's Studies; Importance of Women's Studies; Women's Studies as an Academic Discipline; Role of UGC Centre for Women's Studies; Women's Studies in India and Abroad – Origin and Growth.

UNIT 2 SOCIAL EMPOWERMENT

Women in Higher Education; Gender issues in Health, Environment, Family welfare Measures, Indecent representation of Women in media; Women in Difficult circumstances; Constitutional.

UNIT 3 ECONOMIC EMPOWERMENT

Introduction-organized sector, unorganized sector; Role of Women in Economic Development – Female Poverty and Poverty alleviation programmes; Status of Women farmers and land rights; Women Entrepreneurs; Impact of Globalization on working women; National Policy for the empowerment of women 2001.

UNIT 4 POLITICAL EMPOWERMENT

Political participation of women – Political Socialization- Women leaders in politics- Women in Local Governance- Barriers- Reservation policies- Women's Political Rights: CEDAW.

UNIT 5 SOCIAL ISSUES REGARDING WOMEN

Issues of Girl child, Female, infanticide and foeticide, Sex Ratio child marriage, Dowry & Property Rights, Violence against Women, Domestic violence, Female Headed Households', Women in the Unorganized sector of Employment, Women's work- Status and problems, problems of Dalit women.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- develop social consciousness among the students

- encourage capacity building among the students to enable them to engage in policy decisions
- remove gender biases in all fields of life in the process of gender equality for nation building

COURSE COORDINATORS

1. S.SARAVANAKUMAR,AP/IT
2. J.SINDHUJA,AP/IT

15ITVC301 **DATABASE FUNDAMENTALS**

COURSE OBJECTIVES

To enable the students to

- Retrieve row and column data from tables with the SELECT statement
- Create reports of sorted and restricted data
- Employ SQL functions to generate and retrieve customized data and schema.

UNIT I

Introduction - Retrieving Data Using the SQL SELECT Statement -Restricting and Sorting Data - Single-Row Functions to Customize Output - Conversion Functions and Conditional Expressions

UNIT II

Reporting Aggregated Data Using the Group Functions - Displaying Data from Multiple Tables - Sub-queries - SET Operators - Manipulating Data

UNIT III

Manipulating Data - DDL Statements to Create and Manage Tables - Schema - Creating Other Schema Objects.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Understand the concept of row and column data from tables with the SELECT statement
- Analyze reports of sorted and restricted data
- Implement SQL functions to generate and retrieve customized data and schema.

COURSE COORDINATORS

1. M.PUSHPALATHA, ASP/IT
2. B.VENKATESAN, AP/IT

15ITVC401 **DOT NET FRAMEWORK**

COURSE OBJECTIVES

To enable the students to

- To understand about the concept of Web technology
- To be familiar with creating of database using ADO.NET.
- To study about ASP.NET

Unit I

Introductions, course mechanics, .NET Overview, CLR, Assemblies (monolithic vs. component-based applications), Execution Model, Client-Side vs. Server-Side Programming, Web Technologies. Development Environment Setup, ISS, SQL Server and Visual Studio, Advanced C#: OOP, Delegates, Events, Attributes, unsafe code, .NET Interop

Unit II

.NET Framework Class Library (FCL): System, Collections, I/O, Networking, Threading, Transactions, Exceptions. Databases and Data Access using ADO.NET & LINQ.

Unit III

Introduction to ASP.NET, programming model, server controls, data binding-ASP.NET state management, tracing, caching, error handling, security, deployment, user and custom controls, DotNetNuke. Exposing and consuming ASP.NET Web Services, XML, RESTful, SOAP, DISCO, UDDI

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- understand the concept of Web technology
- Implement creating of database using ADO.NET.
- Analyze about ASP.NET

TEXT BOOKS

15ITVC501 WEB DESIGNING

COURSE OBJECTIVES

To enable the students to

- To Understand about concept of PHP
- To learn the concept of web designing
- To be familiar with creating of database in PHP.

Unit I Core PHP

Introduction to PHP-Handling Html Form With Php-Decisions and loop-Function-String-Working with file and Directories

Unit II Web Designing

HTML- CSS- Java Script- JQuery- AJAX

Unit III Framework- Cake PHP

Introduction to CakePHP- Models: Creating up model for a database table- Controller: Creating controller- Views: Creating Views- Cake session:

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Explain about concept of PHP
- Analyze the concept of web designing
- Implement creating of database in PHP.

15ITVC601 **PHP AND MYSQL**

COURSE OBJECTIVES

To enable the students to

- learn about HTML, DHTML concepts.
- Understand t a variety of presentation effects in HTML
- know about appropriate client-side applications and the Knowledge of XML, PHP.

Unit I HTML, Frames and Forms

History of the Internet and World Wide Web – HTTP, SMTP, POP3, MIME, Understanding roles of Web Browsers and Web Servers. Structure of HTML, Text formatting, Text styles, hyper link, image, and tables. **Frames, Forms** : CSS Frames, Forms and controls, Embedding audio, video and animated files in HTML, CSS –Understanding CSS, Internal CSS, External CSS, Font Properties, Text Properties, Color and Background properties, Table properties, Numbering and List Properties.

Unit II JavaScript

Data types and literals, operators, conditional statements, loop constructs, reserved words; core Objects Array Object, Date Object; Functions passing value to JavaScript functions, user defined functions, Handling old browsers , java script events, formatting cookie, retrieving cookie value from the cookie file, removing a cookie , animations using events.

Unit PHP & MySQL

Why PHP and MySQL - Server-Side Web Scripting - Getting Started with PHP - Adding PHP to HTML -Syntax and Variables - Control and Functions - Passing Information between Pages – Strings – Arrays and Array Functions – Numbers - MySQL Database Administration - PHP/MySQL Functions - Displaying Queries in Tables - Building Forms from Queries

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- ldentify about HTML, DHTML concepts.
- implement a variety of presentation effects in HTML
- Explore about appropriate client-side applications and the Knowledge of XML, PHP.

15ITVC701 INTRODUCTION TO MULTIMEDIA

COURSE OBJECTIVES

To enable the students to

- To understand about Animation and special effects.
- To know about digital photography
- To understand about various concept of photoshop

Unit I Introduction to Multimedia

Multimedia Hardware- Software. Desktop publishing, Multimedia Animation & Special effects (2D/3D animation). Social Networking & Publishing (Blogging, Facebook, Youtube, Instagram etc.) Content Distribution Systems (CD/DVD, Internet, Radio, Television)

Unit II Art & Science of Multimedia

Audio fundamentals (Audio quality, formats and devices), Understanding Image and Video (Resolution, Color, Video standards, formats). Film and Digital photography (technology, techniques, composition & lighting etc.). Introduction to Printing technology

Unit III Photoshop

Introduction Vector Shapes and Bitmaps - Explore the Photoshop Environment - Using the File Browser Basic Photo Corrections Working with Selections - Layer Basics - Masks and Channels - Retouching and Repairing .Painting and Editing Basic Pen Tool Techniques - Vector Masks, Paths, and Shapes - Advanced Layer Techniques .Creating Special Effects Preparing Images for Two-Color Printing - Composite Images - Creating a Composite Image Creating an Animated GIF -Creating Composite Images Using Photo merge Unit 5: The Finished Product Saving Images for the Web and Creating a Web Gallery - Photoshop Elements Print Options – Basics of Adobe Illustrator – Basics of Acrobat Reader

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Explain about Animation and special effects.
- Identify about digital photography
- Implement various concept of photoshop

15ITVC801 OPEN SOURCE SOFTWARE

COURSE OBJECTIVES

To enable the students to

- Explain the features of free &open source software and Familiarization with LINUX
- Work with PHP
- Demonstrate the working of MySQL

Unit I Open source software

Features, advantages over proprietary software, examples**, Free software:** concepts, features, Free software Vs Open Source software, Free software movements. Policies, GPL, Free OS, History and Features of Linux, Various flavours of Linux, Linux Kernel and Shell, Graphical Desktops- GNOME, KDE, Linux File System and Directories

Unit II Forms in PHP

Creating a simple input form, combining HTML & PHP code on a single page, redirecting the user ,creating a send mail form, File upload form Cookies: Introduction, setting a cookie with PHP, deleting a cookie, session function overview: starting a session,working with session variables, passing session IDs in the query string, destroying sessions &unsetting variables

Unit III Database concepts:

Open source database software: MySQL features MySQL data types: Numeric,date & time,string Table creation in MySQL:insert,select,where clause,ordering the result,like operator Selecting Multiple tables:using join,using queries Modifying records:update command,replace command,delete command date & time functions in MySQL Interacting with MySQL using PHP:connecting to MYSQL, Executing queries, Retrieving error messages,inserting data with PHP, retrieving data with PHP

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Analyze the features of free &open source software and Familiarization with LINUX
- Implement about Work with PHP
- Evaluate the working of MySQL

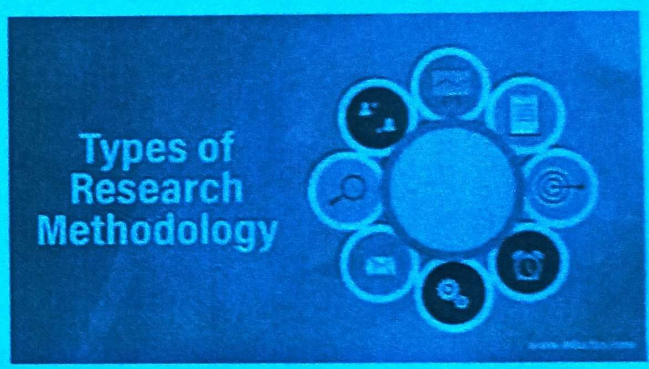
BASICS OF RESEARCH METHODOLOGY



Date: 31.08.2015 to 04.09.2015

Course Co-ordinator: Dr.M.Anand

Venue: M212

15PCOVC10 1

15PVLVC10 1

BASICS OF RESEARCH METHODOLOGY

(Common for M .E. Communication Systems/VLSI Design)

COURSE OBJECTIVE

To enable the students to

- know the basics of Research methodology and developing research plan.
- understand the data collection and analysis of Literature review.

UNIT I Introduction to Research Methodology **15**

Meaning and importance of Research – Types of Research – Selection and formulation of Research Problem Research Design – Need – Features – Inductive, Deductive and Development of models, Developing a Research Plan – Exploration, Description, Diagnosis, Experimentation, Determining Experimental and Sample Designs, Analysis of Literature Review – Primary and Secondary Sources, Web sources –critical Literature Review.

UNIT II Data Collection and Analysis **15**

Sources of Data – Primary, Secondary and Tertiary – Types of Data – Categorical, nominal & Ordinal, Methods of Collecting Data: Observation, field investigations, Direct studies – Reports, Records or Experimental, observations. Sampling methods – Data Processing and Analysis strategies- Graphical representation – Descriptive Analysis – Inferential Analysis- Correlation analysis – Least square method - Data Analysis using statistical package– Hypothesis, – testing – Generalization and Interpretation – Modeling.

TOTAL PERIODS **30**

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- development of the research models and developing the Research Plan.
- analyze the data and interpret the data correlation.

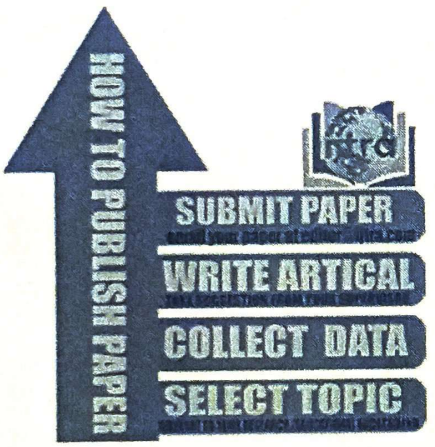
RESEARCH PAPER WRITING AND JOURNAL SUBMISSION



Date: 01.12.2015 to 05.12.2015

Course Co-ordinator: Dr.Fathima Jabeen

Venue: M212

15PCOVC30 1/ 15PVLVC301 **RESEARCH PAPER WRITING AND JOURNAL SUBMISSION**

(Common for M .E. Communication Systems/VLSI Design)

COURSE OBJECTIVE

To enable the students to

- understand the concept of Research writing and publishing.
- understand the Research paper report writing.

Unit-I Research Paper Writing and Journal submission **15**

Layout of a Research Paper, Journals in Computer Science, Impact factor of Journals, When and where to publish- Ethical issues related to publishing, Plagiarism and Self-Plagiarism.

Unit II – Research report writing **15**

Types of research reports – Brief reports and Detailed reports; Report writing: Structure of the research report- Preliminary section, Main report, Interpretations of Results and Suggested Recommendations; Report writing: Formulation rules for writing the report: Guidelines for presenting tabular data, Guidelines for visual Representations.

TOTAL PERIODS 30

COURSE OUTCOMES

Upon completion of this course, the students will be able to

- Analyze Research paper writing and Journal submission.
- Analyze the report writing and publish in the Journal.

TEXT BOOK & MANUALS

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF MECHANICAL ENGINEERING

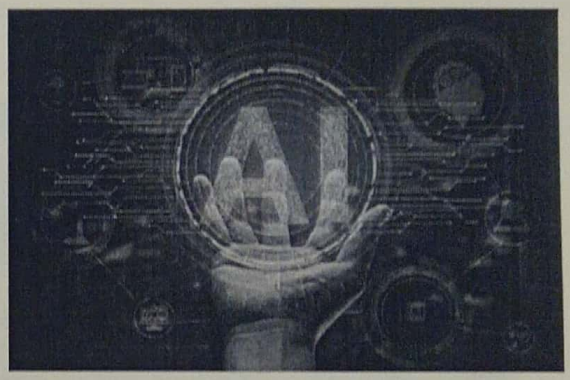
VALUE ADDED COURSE

ON

15PEDVC01-ARTIFICIAL INTELLIGENCE FOR ENGINEERS

ABOUT THE COURSE:

The primary objective of this course is to introduce the basic principles, techniques, and applications of Artificial Intelligence. Emphasis will be placed on the teaching of these fundamentals, not on providing a mastery of specific software tools or programming environments. Assigned projects promote a 'hands-on' approach for understanding, as well as a challenging avenue for exploration and creativity.



INTENDED AUDIENCE:

1. I and II year PG students those wants to know the concept of Artificial intelligence.
2. Those wants to know the application of Artificial intelligence.
3. Those wants to apply the concept of AI in real time application.

DURATION OF THE COURSE:

Period: 31.08.2015 to 04.09.2015

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning
3. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.

COURSE CO-ORDINATOR:

1. **Mr.M.MAKESH, ASP/MECH**

VENUE:

Seminar Hall I,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 25.08.2016.

Scanned by CamScanner

15PEDVC01 ARTIFICIAL INTELLIGENCE FOR ENGINEERS

COURSE OBJECTIVES

To enable the students to

- Know the basics concept artificial intelligence.
- Know the effect artificial intelligence in industry oriented.
- Apply AI techniques for different industrial application

1. **Introduction**:

   A brief review of AI history, What is artificial intelligence? , Related research fields , Scope of this course

2. **Production System**

   Production system, Inference engine, Working memory, Knowledge base, Pattern matching,

3. **Ontology**

   What is ontology? , Semantic network, Frame, Structural knowledge, Declarative knowledge, Procedural knowledge.

4. **Fuzzy Logic: Human-like decision making**

   Definition of fuzzy set ,Membership function , Notation of fuzzy set ,Operations of fuzzy set, Fuzzy number and operations , Extension principle , Fuzzy rules , De-fuzzification , Fuzzy control.

5. **Pattern Recognition**

   Concept and concept learning, Pattern classification and recognition. Feature vector representation of patterns. Nearest neighbour based learning. , Discriminant function and decision boundary. Multi-class pattern recognition. , General formulation of machine learning. The k-means algorithm.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Identify the need of AI
- Apply the concepts for automation of industry.
- Apply the various engineering application.

PAAVAI ENGINEERING COLLEGE

(AUTONOMOUS)

DEPARTMENT OF MECHANICAL ENGINEERING

VALUE ADDED COURSE

ON

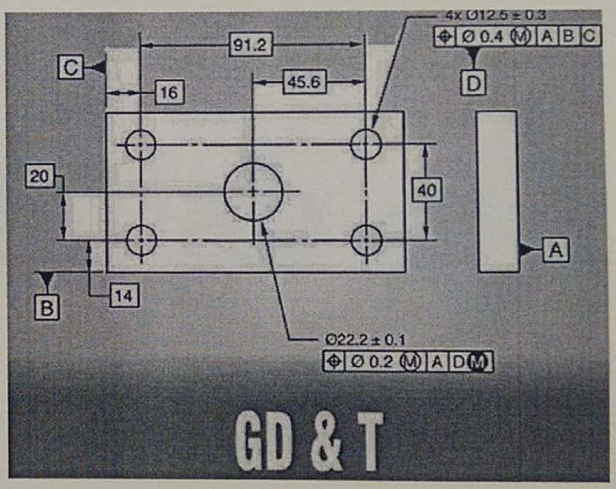
15PEDVC02-GEOMETRIC DIMENSIONING AND TOLERANCING

ABOUT THE COURSE:

This course is designed for those who use the *ASME Y14.5 Dimensioning and Tolerancing* standard, this course covers most of the geometric dimensioning controls used on mechanical engineering drawings. Theoretical and practical concepts of each of the geometric controls are explained relative to design, tooling, production, and inspection. Parts of a directional-change gear box are used as platforms for the geometric controls, including shafts, gears, bearings, keys, lip seals, castings, and threaded fasteners.

INTENDED AUDIENCE:

1. I and II year PG students those wants to know the concept of geometric dimensioning.
2. Those wants to apply the GD &T concept in design of mechanical components.
3. Those wants to apply the concept in real time application.



DURATION OF THE COURSE:

Period: 21.12.2015 to 26.12.2015

Total hours: 30 Hours (6 Hours /day)

COURSE OUTCOMES:

At the end of this course students can be able to

1. identify Symbols and feature control frame
2. explain the terms, rules & measurement devices
3. describe the characteristics of straightness, flatness, circularity & cylindricity
4. explain how to work with datums, parallelism, perpendicularity & angularity
5. explain runout, profile and position tolerance

COURSE CO-ORDINATOR

Mr.P.PUGALENTHI, AP/MECH

VENUE:

Seminar Hall II,

Paavai Engineering College

Note: Interested students enroll their name to the course in charge on or before 20.12.2015.

15PEDVC02 GEOMETRIC DIMENSIONING & TOLERANCING

COURSE OBJECTIVES

To enable the students to

- Know the basics of Geometric Dimensioning and Tolerancing
- Know how set the tolerancing limits for the given dimension.
- Representation procedure for the dimensioning and Tolerancing for the given drawing.

1. **Introduction** **(6)**

   Terms and definitions, Common symbols & Terminology, Fundamental Rules (Drawing)

2. **Feature definition and Material** **(6)**

   Feature definition, With Size and Without Size, Material Condition (Maximum, Least, Regard of Material Condition),Limit Tolerancing, Dimension Origin

3. **Selection of Datum reference** **(6)**

   Datum Reference Frame - Theory & Interpretation, Datum Elements, View Oriented Datum's

4. **Form Tolerances** **(6)**

   Flatness, Verification, Surface Roughness Straightness, Line Elements Applied to a Flat Surface Circularity, Average Diameter

5. **Profile Tolerances** **(6)**

   Bilateral, Bilateral - Unequal, Unilateral Run out Tolerance, Circular Run out Total Run out.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Provide Tolarancing limits for the different diagram.
- Provide the different symbols for various position.
- Mark the various form tolerance in its appropriate places,

INTRODUCTION TO ARTIFICIAL NEURAL NETWORKS

Course Duration:07.09.2015-12.09.2015

Venue: PEC-Temple Tower -T207

Course Coordinator: Mr.G.Balaji Prof/EEE

15PPEVC101 INTRODUCTION TO ARTIFICIAL NEURAL NETWORKS

COURSE OBJECTIVES

To enable the students to

- explore the architecture and learning principles of Neural Networks.
- develop the various hybrid algorithms involved in Neural Networks.
- provide adequate knowledge of application of Neural Networks to real time systems.

UNIT I ARTIFICIAL NEURAL NETWORKS 10

Biological Neurons and Neural Networks, Basic Structures and Properties of Artificial NeuralNetworks, Basic Neuron Models-McCulloch-Pitts –Different Activation Functions,Singe Layer Perceptrons-Linear Seperability, Single Layer Perceptron Architecture-Learning rule, Algorithm, Applications.

UNIT II BACK PROPAGATION NEURAL NETWORKS 10

Multi-Layer Perceptron -Architecture, activation functions, Learning, Back PropagationAlgorithm – Practical considerations - Limitations–Network Paralysis, Local Minima, Temporal Instability – Deep learning- introduction, Networks Classes .

UNIT III NETWORK BASED ON COMPETITION 10

Fixed weight competitive Network-Maxnet, Mexican Hat andHamming Net, Counter Propagation Networks-Kohonen's self-organizing map – Training theKohonen layer – Training the Grossberg layer – Full counter propagation network .

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply the concept of neural networks in practical applications.
- design, implement and analyze the performance of Back Propagation and Deep Neural Networks
- solve real world problems using Associative Neural Network Techniques

BASICS OF NETWORK ROUTING ALGORITHMS

Course Duration:09.01.2016-13.01.2016

Venue: PEC-Temple Tower -T207

Course Coordinator: Mr.A.Rathinam ASP/EEE

15PPEVC201 BASICS OF NETWORK ROUTING ALGORITHMS

COURSE OBJECTIVES

To enable the students to

- get familiarized with different protocols in internet routing and optical WDM networks
- get acquainted with the concepts of supporting protocols in Mobile-IP networks.
- differentiate the routing processes involved in mobile ad-hoc networks and wireless sensor networks from conventional networks.

UNIT I ROUTING IN TELEPHONE NETWORKS AND INTERNET 10

General Classification of routing, Routing in telephone networks, Dynamic Non-hierarchical Routing (DNHR), Trunkstatus map routing (TSMR), Real-Time Network Routing (RTNR), Hierarchical routing.Exterior Routing Protocols: Exterior Gateway Protocol (EGP) and Border Gateway Protocol (BGP).

UNIT II ROUTING IN OPTICAL WDM NETWORKS 10

Classification of RWA algorithms, RWA algorithms, Fairness and Admission Control, Distributed Control Protocols,Permanent Routing and Wavelength Requirements, Wavelength Rerouting- Benefits and Issues, Light path Migration, Rerouting Schemes, Algorithms- AG, MWPG.

UNIT III ROUTING IN MOBILE - IP NETWORKS 10

Macro-mobility Protocols, Micro-mobility protocol: Tunnel based: Hierarchical Mobile IP, Intra domain Mobility Management, Routing based: Cellular IP, Handoff Wireless Access Internet Infrastructure (HAWAII).

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- identify various routing schemes and their applications to the real world circuit-switched networks
- compute the blocking probability of various routing schemes.
- explore the characteristics of mobile ad hoc networks

FUNDAMENTALS TO SOFTWARE AND COGNITIVE RADIO SYSTEMS

Course Duration:08.08.2015-12.08.2015

Venue: PEC-Temple Tower -T207

Course Coordinator: Mr.M.Raja AP/EEE

15PPEVC301 FUNDAMENTALS TO SOFTWARE AND COGNITIVE RADIO SYSTEMS

COURSE OBJECTIVES

To enable the students to

- apply and implement the design methodologies in the wireless applications
- learn about software defined radio and cognitive radio systems.
- provide adequate knowledge of Cognitive Radio Systems

UNIT I SOFTWARE RADIO **10**

Evolution- architecture perspectives- Software radio concepts-SDR front end technology: Transmitter specifications-Receiver specifications- operating frequency bands- receiver design considerations-transmitter design considerations- Candidate architecture for SDR- Multimode SDR architecture.

UNIT II COGNITIVE RADIO **10**

Introduction to cognitive radios –economics of cognitive radio-spectrum awareness, spectrum subleasing, spectrum sharing- cognitive networks: motivation &requirements-foundation &related works in cognitive radio- cognitive radio implementation.

UNIT III COGNITIVE RADIO APPLICATIONS **10**

Cognitive radios in wireless communication- Mobility management- location estimation & sensing-UWB Cognitive radio.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Design the architecture of Software and Cognitive Radio Systems
- Analyze the performance of Cognitive Radio Systems.
- Identify the applications of Cognitive Radio Systems

TEXT BOOKS

SENSING TECHNIQUES AND SENSOR

Course Duration:07.09.2015-11.09.2015

Venue: PEC-Temple Tower -T208

Course Coordinator: Mr.A.Rathinam ASP/EEE

15PPSVC101 **SENSING TECHNIQUES AND SENSORS**

COURSE OBJECTIVES

To enable the students to

- gain knowledge on the sensor characteristics and the fundamental principles of sensing
- learn the optical components of sensors and characteristics of interface electronic circuits
- get acquainted with motion-related sensors

UNIT I PRINCIPLES OF SENSING **10**

Data acquisition – Sensor characteristics: Transfer function – Calibration – Accuracy – Calibration error -Nonlinearity – Saturation – Repeatability – Reliability – Uncertainty. Physical principles of sensing: electric charges, fields, potentials – capacitance – magnetism – resistance – piezoelectric effect – pyroelectric effect – Hall effect – thermoelectric effects – sound waves

UNIT II OPTICAL COMPONENTS AND INTERFACE ELECTRONICS **10**

Optical Components of sensors: Radiometry – Photometry – Windows - mirrors – lenses – Fresnel Lenses – fiber optics – concentrators. Interface electronic circuits: Input characteristics – amplifiers – light-to-voltage converters – Excitation circuits – Analog-to-Digital converters – Direct digitization.

UNIT III MOTION RELATED SENSORS **10**

Occupancy and motion detectors: Ultrasonic – microwave motion – capacitive occupancy – triboelectric – optoelectronic motion – optical presence sensors – Pressure-gradient sensors. Velocity and acceleration: Accelerometer characteristics – capacitive accelerometers.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- extrapolate the characteristics of sensors by knowing the physical principles of sensors
- predict the optical components of sensors
- apply appropriate motion-related sensors

TEXT BOOKS

ETHICAL HACKING

Course Duration:09.01.201816-13.01.2016

Venue: PEC-Temple Tower -T208

Course Coordinator: Mr.C.Arul Kumar ASP/EEE

15PPSVC201 ETHICAL HACKING

COURSE OBJECTIVES

To enable the students to

- examine the different phases involved in ethical hacking.
- learn technologies for scanning and the steps involved in performing enumeration.
- get exposure on the password cracking techniques and wireless network hacking.

UNIT I INTRODUCTION AND GATHERING TARGET INFORMATION 10

Introduction to Ethical Hacking: Problem Definition –Need for Security – Can Hacking Be Ethical? – Essential Terminology – Elements of Security –Phases – Hacktivism – Modes of Ethical Hacking – Keeping it Legal. Footprinting: Information Gathering Methodology – Unearthing Initial Information - Tool: Sam spade – Locate the Network Range – Tool: NeoTrace , Visual Route – Social engineering.

UNIT II GATHERING NETWORK AND HOST INFORMATION 10

Scanning: Detecting 'Live' Systems On Target Network –Tools: War Dialers, Ping Utilities – Port Scanning – Tool: SuperScan 3.0,NMap(Network Mapper) – Active Stack Fingerprinting – Passive Fingerprinting - Proxy Servers – Anonymizers. Enumeration: Net Bios Null Sessions – NetBIOS Enumeration – SNMP Enumeration- Hacking Tool: GetAcct - Active Directory Enumeration – AD Enumeration countermeasures.

UNIT III SYSTEM AND NETWORK HACKING 10

System Hacking: Administrator Password Guessing– Performing automated password guessing– Tool: Legion, NTInfoScan – Password Types- Cracking a password - Tool: Keyloggers - Password Sniffing - Privilege Escalation - Manual Password Cracking Algorithm - Automatic Password Cracking Algorithm – Understanding Rootkits – Hiding Files – Covering tracks and erasing evidence.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- identify appropriate hacking tools for different phases of hacking.
- work with scanning tools and enumeration techniques.
- construct and Sql Injection Attack.

INTELLIGENT OPTIMIZATION TECHNIQUES

Course Duration: 08.08.2015-12.08.2015

Venue: PEC-Temple Tower -T208

Course Coordinator: Mr.M.Raja AP/EEE

15PPSVC301 INTELLIGENT OPTIMIZATION TECHNIQUES

COURSE OBJECTIVES

To enable the students to

- impart in-depth knowledge on different advanced optimization techniques to solve engineering problems
- impart the concept of multi-objective optimization and its applications to real world problems.
- apply Swarm Optimization techniques for solving engineering problems

UNIT I FUNDAMENTALS OF OPTIMIZATION 10

Definition - Classification of optimization problems - Unconstrained and Constrained optimization – Optimality conditions - Classical Optimization techniques - Linear and non - linear programming - Quadratic programming - Mixed integer programming

UNIT II EVOLUTIONARY COMPUTATION TECHNIQUES 10

Evolution in nature - Fundamentals of Evolutionary algorithms - Principle of Genetic Algorithm – Evolutionary Strategy and Evolutionary Programming - Genetic Operators - Selection, Crossover and Mutation - Issues in GA implementation - Differential Evolution technique.

UNIT III ADDITIONAL OPTIMIZATION METHODS 10

Simulated annealing algorithm - Tabu search algorithm - Ant colony optimization - Bacteria Foraging optimization -Artificial immune system.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- familiarize with the basic concept of optimization techniques.
- apply Genetic Algorithm for solving engineering problems.
- apply Swarm Optimization techniques for solving engineering problems.

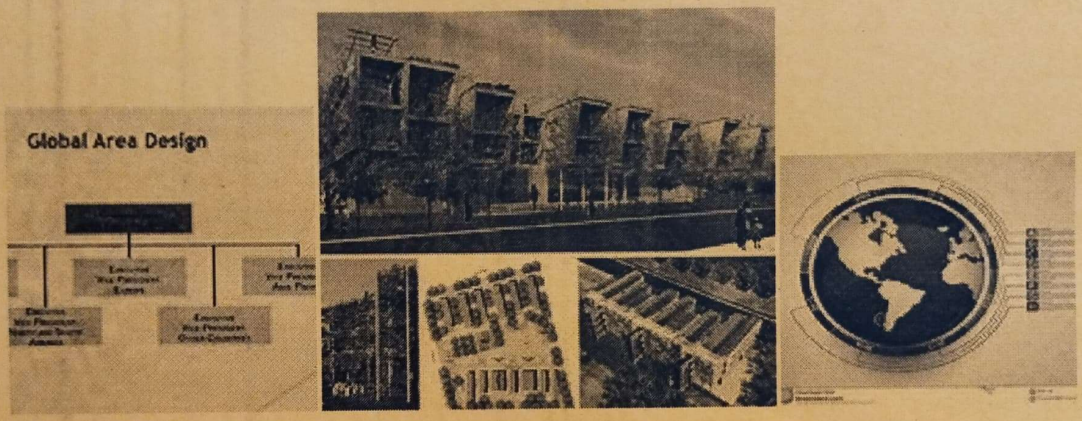
DEPARTMENT OF STRUCTURAL ENGINEERING

Value Added Course

15PSEVC101 - GLOBAL HOUSING DESIGN



- This course has emphasizes on social, economic and environmental factors are interrelated in the design of housing settlements and the housing design should take into consideration: time, environment, and community.
- The course topic will cover the aspects of how incrementality, typology mix and clustering can become key design approaches in enhancing the living conditions of urban communities and design hypothesis and/or a managerial strategy to develop an inclusive dwelling community based on typology mix and clustering.

Date: 26.09.2015 to 30.09.2015

Venue: T226

Course Incharge:

Mr.S.Balamurugan, AP/Civil

15 PSEVC101 **GLOBAL HOUSING DESIGN**

COURSE OBJECTIVES

To enable the students to

- Learn about the key design strategies required to develop adequate housing

Housing Designed to accommodate growth and change through time -Housing project in Indore a case study -interwoven urban fabric built in (mud) brick construction houses a diverse set of dwelling types -orchestrated in a master plan consisting of gardens, paved squares, covered and shaded resting places, arcades and bazaars.

Ingenious clustering of four-and five-story apartment blocks, organized around a large central square in which the mosque, markets and festival hall are located.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- Formulate a design hypothesis and/or a managerial strategy to develop an inclusive housing cluster dwelling community

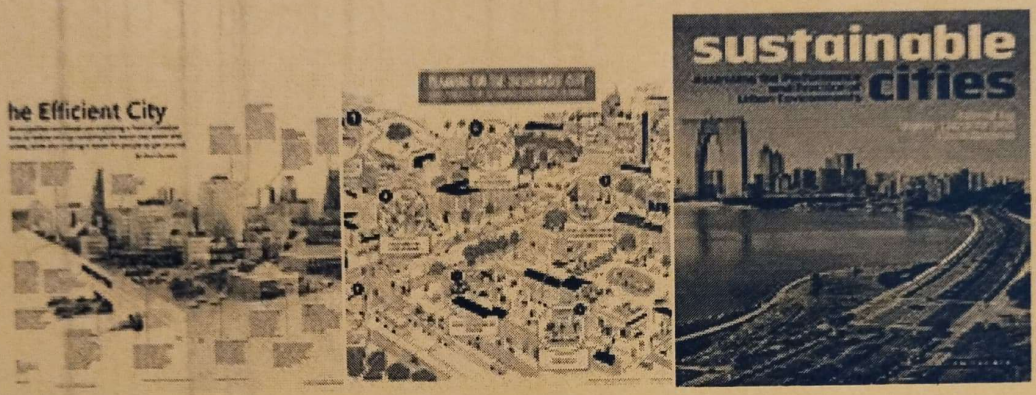
Value Added Course

15PSEVC201 - SUSTAINABLE CITIES



- The course discusses sustainability principles and concepts from across various domains.
- Elaborates on sustainability definitions, aspects, dynamic nature of it, and its application in everyday life. Further, it discusses global efforts from UNFCCC, IPCC, and other agencies for developing context-based solutions and climate change mitigation efforts and Includes study on building technologies to improve efficiency and response to surroundings.

Date: 25.01.2016 to 29.01.2016

Venue : T225

Course Incharge:

Mr.V.Nagendran, AP/Civil

15 PSEVC201 **SUSTAINABLE CITIES**

COURSE OBJECTIVES

To enable the students to

- Know how technology is shaping transportation, energy, urban resilience, and more

The urban opportunity - Cities: cultural and social transformation - Challenge of urban politics, planning and governance - Urban research methods - Urban theory and history - Understanding urban systems - Municipal, regional and national governance -Urban utilities -Urban public finance and taxation Law, order and conflict -Land management and planning - urban poverty - Measuring urban poverty - Poverty reduction in cities - Affordable and adequate housing -Safety and violence - Urban vulnerabilities- City production and consumption- Migration and the refugee crisis- Improving human development in cities –Providing universal urban services and infrastructure Sustainable environmental services and infrastructure - Sustainable transport planning

Sustainable urban energy systems

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- examines how urban sustainability can be delivered with increasing productivity and reduced inequality

TEXT BOOKS

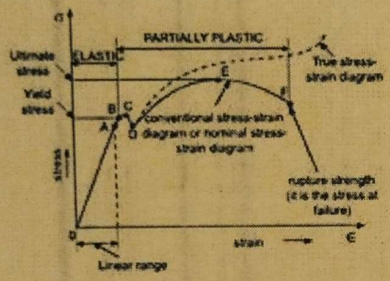
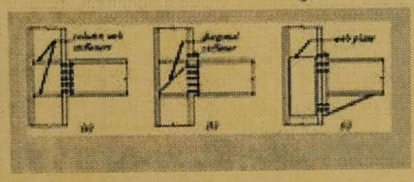
15PSEVC301 - LIMIT STATE DESIGN OF STEEL STRUCTURES



Design of steel structure notes pdf



- The course deals with design of steel structures using "Limit State Design Method". The design methodology is based on the latest Indian Standard Code of Practice for general construction.
- The subject covers all the necessary components such as material specifications, connections and elementary design of structural members for designing industrial steel structures. The course provides material specifications and design considerations. Design of compression members, built-up compression members along with the batten and lacing systems are explained in in this course.

Date: 22.06.2015 to 26.06.2015

Venue : T229

Course Incharge:

Mr.K.Elaiyaraja AP/Civil

15 PSEVC301 LIMITE STATE DESIGN OF STEEL STRUCTURES

COURSE OBJECTIVES

To enable the students to

- Understand how to design steel connections for any combination of axial, shear, and moment loads is fundamental to effective building design.

Bolted Connections Review bolted connection basics including force transfer mechanisms, bolt shear and bearing, and slip critical connections- Welded Connections Review welded connection basics including types of welding, AISC360 provisions for fillet welds, and weld limit states. Eccentrically Loaded Bolts – Elastic Method - Introduce eccentrically loaded connections and detail the elastic design method for eccentrically loaded bolt groups. Eccentrically Loaded Bolts – Ultimate Strength Methods

Introduce the ultimate strength method for eccentric design and contrast it to the elastic method. Develop design tools to calculate the strength of an eccentrically loaded bolted connection.

Eccentrically Loaded Welds – Elastic Method

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- apply the design concepts in realistic design scenarios.

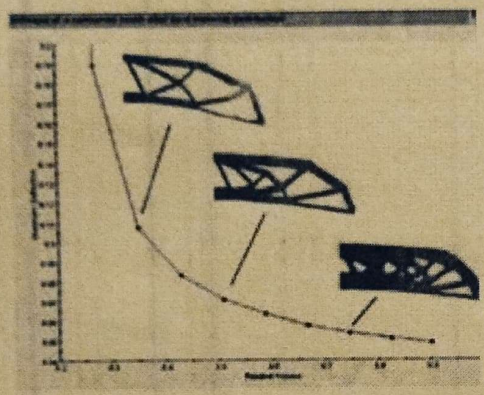
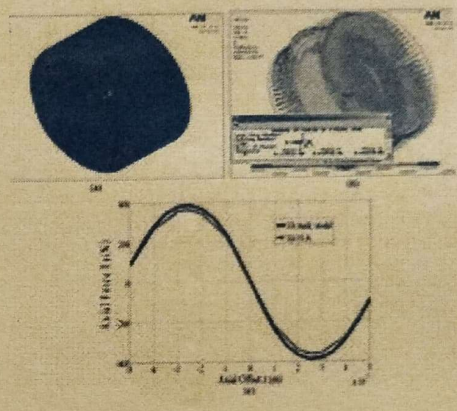
Value Added Course

15PSEVC401 - STRUCTURAL ENGINEERING OPTIMIZATION





- Design optimization is more than reducing weight. It's about maximizing performance and efficiency of material application while minimizing life-cycle cost.
- Finite Element technology provides us with tools for structural design optimization throughout several design phases.Techniques that attempt to improve or find the best mechanical structures such as size, shape and topology optimization is discussed here.

Date: 01.12.2015 to 05.12.2015

Venue : T226

Course Incharge:

Mr.J.Rajkumar AP/Civil

15 PSEVC401 **STRUCTURAL ENGINEERING OPTIMIZATION**

COURSE OBJECTIVES

To enable the students to

- understand the theory of optimization methods and algorithms developed for solving various types of optimization problems.

Introduction to Optimization: Introduction - Historical developments – Engineering applications of Optimization - Statement of an Optimization problem - Classification of Optimization problems - Optimization Techniques. Optimization by calculus: Introduction - Unconstrained functions of a single variable - Problems involving simple constraints - Unconstrained functions of several variables - treatment of equality constraints – Extension to multiple equality constraints - Optimization with inequality constraints - The generalized Newton-Raphson method. Network Analysis: Introduction - Elementary graph theory - Network variables and problem types - Minimum-cost route - Network capacity problems - Modification of the directional sense of the network - Application of Optimization techniques to trusses, Beams and Frames.

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- formulate optimization models for a wide range of civil engineering problems and able to solve them.

1. M.KAVITHA, PROFESSOR/MBA

HEAD OF THE DEPARTMENT
Management Studies
PAAVAI ENGINEERING COLLEGE
PACHAL (Po) Namakkal - 637

15BAVC201 RURAL DEVELOPMENTCOURSE OBJECTIVES

To enable the students to

- Understand climate change
- Adaptation for Sustainable rural livelihoods
- Climate Change and Adaptation Planning

Unit I Sustainable Rural Livelihoods Concept of Sustainable Rural Livelihoods (SRL) –Objectives – Strategies –Issues-Natural Resources conservation and SRL – Sustainable Crop Production – Indigenous Animals Breeding – Health & Nutrition – Income generation. 6

Unit II Climate Change(15 Hours) Climate Change – Components – Natural Resources Management(NRM) – Water Resources – Land Resources – Forest Conservation – Joint Forest Management (JFM) – Watershed Management – Eco-environmental Sustainability – Conservation of Local Water Bodies – Kudimaramathu System – Rainwater Harvesting – Indigenous Methods & Techniques.
6

Unit III Earth Sciences and Natural Resources Earth Sciences and Natural Resources – Water Table – Ground Water Recharging Structures – Natural Vegetation – Geospatial technology – GIS – Geo-informatics – Geo-morphology – ISRO and Rural Development – RESPOND Projects – Remote sensing – Resource Mapping – Types, Methods & Techniques. Faculty of Arts Department of PopulationStudies 6

Unit IV Adaptation Techniques Adaptation Techniques – Concepts – Weather Crop Advisory Services (WCAS) – Livestock Advisory – Vermicompost – Soil Resources Development – Tree Based Nursery & Cropping – Organic – fertilizers & Pesticides:- Production & Usage Zero Tillage – Direct Seeded Rice – Crop Intensification – Solar pumped Irrigation. 6

Unit V Climate Change and Adaptation Planning Climate Change Adaptation Planning – Technology & Knowledge Management – Village Tool Bank – Community Managed crop Production & Resource Conservation: Approaches and adaptation package – Exposure Visit and Observation - Applications and Present Trends- Thoughts- Ideas Sharing – Community based Initiatives- Results and Impact. 6

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- will be able to work in Climate Change related Projects
- can get the complete information on natural Resources
- analysis the adaptation techniques in business

15BAVC301 **INDUSTRIAL RELATIONS**

COURSE OBJECTIVES

To enable the students to

- explore the basic concepts and issues related to Industrial Relations.
- gain conceptual understanding of Industrial Disputes and Collective Bargaining.
- familiarise with the legal principles governing the welfare of employees

UNIT I INDUSTRIAL RELATIONS AND TRADE UNION 8

Overview and Concept of Industrial Relations, Objectives, Importance, scope & Evolution of IR inIndia – Factors affecting

UNIT II INDUSTRIAL CONFLICTS & COLLECTIVE BARGAINING 4

Industrial Disputes: Impact, Causes - Strikes: Types, Prevention of Strikes - Dispute Settlement Machinery: Conciliation, Conciliation Officer and Conciliation Board, Conciliation Procedure –Arbitration: Concept, Types, Qualification of Arbitrator, and Procedure

UNIT III LABOUR WELFARE 6

Labour Welfare: Concept, Importance, Approaches. Scope – Labour Welfare Facilities under WelfareFunds – Labour Welfare Officer: Duties - Worker's Education: Concept, Objectives, and Workers Education in India.

UNIT IV INDUSTRIAL SAFETY 6

Causes of Accidents-Prevention-Safety Provisions-Industrial Hazards and Hygiene-Importance-Problems-Occupational Hazards-Disease-Psychological Problems-Counseling-Statutory provisions.

UNIT V 6

WORKER'S PARTICIPATION IN MANAGEMENT Worker's Participation in Management – Concept, Objective – Forms of participation – Levels of participation – Evaluation of Worker's Participation in Management Scheme – Conditions necessary for effective working of the scheme

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- acquire knowledge on various aspects of Industrial Relations and Trade Union.
- analyse the causes for Industrial conflicts and the need for Collective Bargaining.
- evaluate the impact of providing labor welfare facilities on employee productivity.

DEPARTMENT OF MASTER OF COMPUTER APPLICATIONS

APPLICATIONS OF ASP.NET

VALUE ADDED COURSE

ABOUT THE COURSE:

- **ASP.NET** is a web application framework developed and marketed by Microsoft to allow programmers to build dynamic web sites. It allows you to use a full featured programming language such as C#.
- **ASP.NET** covers all the basic elements of **ASP.NET** that a beginner would require to get started.
- **ASP.NET** has been prepared for the beginners to help them understand basic ASP.NET programming. After completing this tutorial you will find yourself at a moderate level of expertise in **ASP.NET** programming from where you can take yourself to next levels

COURSE OUTCOMES:

At the end this course, students will be able to

- understand the concept of Web technology
- implement creating of database using ADO.NET
- analyse about ASP.NET

DATE & VENUE :

01.12.2015 to 05.12.2015, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Mr. K.Murugesan, AP/MCA

15CAVC101 APPLICATION OF ASP.NET

COURSE OBJECTIVES

To enable the students to

- understand about the concept of Web technology
- be familiar with creating of database using ADO.NET.
- study about ASP.NET

UNIT I Introduction

Introductions, course mechanics, .NET Overview, CLR, Assemblies (monolithic vs. component-based applications), Execution Model, Client-Side vs. Server-Side Programming, Web Technologies. Development Environment Setup, ISS, SQL Server and Visual Studio, Advanced C#: OOP, Delegates, Events, Attributes, unsafe code, .NET Interop

UNIT II NET Framework

NET Framework Class Library (FCL): System, Collections, I/O, Networking, Threading, Transactions, Exceptions. Databases and Data Access using ADO.NET & LINQ.

UNIT III ASP.NET

Introduction to ASP.NET, programming model, server controls, data binding-ASP.NET state management, tracing, caching, error handling, security, deployment, user and custom controls, DotNetNuke. Exposing and consuming ASP.NET Web Services, XML, RESTful, SOAP, DISCO, UDDI

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- understand the concept of Web technology
- implement creating of database using ADO.NET
- analyse about ASP.NET

MULTIMEDIA AND PHOTOSHOP

VALUE ADDED COURSE

ABOUT THE COURSE:

- **Multimedia** is the field of Computer Science that integrates different forms of information and represents in the form of audio, video, and animation along with the traditional media, i.e., text, graphics/drawings, images, etc.
- **Multimedia** literal meaning of multimedia.
  - **Multi** − it means more than one
  - **Medium** − it is singular and it means intermediary or mean
  - **Media** − it is plural and it means conveying the information
- **Photoshop** offers many tools and options for manipulating and creating images, and is used in graphic design, illustration, photography, architecture, web design and more.

COURSE OUTCOMES:

At the end this course, students will be able to

- explain about Animation and special effects
- identify about digital photography
- implement various concept of photoshop

DATE & VENUE :

22.06.2015 to 26.06.2015, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Miss.V.Gowsika, AP/MCA

Miss.M.Lavanya, AP/MCA

15CAVC201 MULTIMEDIA AND PHOTOSHOP

COURSE OBJECTIVES

To enable the students to

- understand about Animation and special effects
- know about digital photography
- understand about various concept of photoshop

UNIT I Introduction to Multimedia

Multimedia Hardware- Software. Desktop publishing, Multimedia Animation & Special effects (2D/3D animation). Social Networking & Publishing (Blogging, Facebook, Youtube, Instagram etc.) Content Distribution Systems (CD/DVD, Internet, Radio, Television)

UNIT II Art & Science of Multimedia

Audio fundamentals (Audio quality, formats and devices), Understanding Image and Video (Resolution, Color, Video standards, formats). Film and Digital photography (technology, techniques, composition & lighting etc.). Introduction to Printing technology

UNIT III Photoshop

Introduction Vector Shapes and Bitmaps - Explore the Photoshop Environment - Using the File Browser Basic Photo Corrections Working with Selections - Layer Basics - Masks and Channels - Retouching and Repairing .Painting and Editing Basic Pen Tool Techniques - Vector Masks, Paths, and Shapes - Advanced Layer Techniques .Creating Special Effects Preparing Images for Two-Color Printing - Composite Images - Creating a Composite Image Creating an Animated GIF -Creating Composite Images Using Photo merge Unit 5: The Finished Product Saving Images for the Web and Creating a Web Gallery - Photoshop Elements Print Options

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- explain about Animation and special effects
- identify about digital photography
- implement various concept of photoshop

OPEN SOURCE SOFTWARE

VALUE ADDED COURSE

ABOUT THE COURSE:

- A software whose **source code** is freely distributed with a license to study, change and further distributed to anyone for any purpose is called **open source software**. Open source software is generally a team effort where dedicated programmers improve upon the source code and share the changes within the community. Open source software provides these advantages to the users due to its thriving communities
- A software that is available free of cost for use and distribution but cannot be modified as its source code is not available is called **freeware**.

COURSE OUTCOMES:

At the end this course, students will be able to

- analyze the features of open source software with LINUX
- implement about Work with PHP
- evaluate the working of MySQL

DATE & VENUE :

22.06.2015 to 26.06.2015, MCA Laboratory, Paavai Engineering College

COURSE INCHARGE:

Miss.M.Nithya, AP/MCA

Miss.R.M.Alagunila, AP/MCA

15CAVC301 OPEN SOURCE SOFTWARE

COURSE OBJECTIVES

To enable the students to

- explain the features of free &open source software and Familiarization with LINUX
- work with PHP
- demonstrate the working of MySQL

UNIT I Open Source Software

Features, advantages over proprietary software, examples**,** Free software**:** concepts, features, Free software Vs Open Source software, Free software movements. Policies, GPL, Free OS, History and Features of Linux, Various flavors of Linux, Linux Kernel and Shell, Graphical Desktops- GNOME, KDE, Linux File System and Directories

UNIT II Forms in PHP

Creating a simple input form, combining HTML & PHP code on a single page, redirecting the user ,creating a send mail form, File upload form Cookies: Introduction, setting a cookie with PHP, deleting a cookie, session function overview: starting a session, working with session variables, passing session IDs in the query string, destroying sessions &unsetting variables

UNIT III Database Concepts

Open source database software: MySQL features MySQL data types: Numeric, date & time, string table creation in MySQL: insert, select, where clause, ordering the result, like operator Selecting Multiple tables: using join, using queries Modifying records: update command, replace command, delete command date & time functions in MySQL Interacting with MySQL using PHP: connecting to MYSQL, Executing queries, Retrieving error messages, inserting data with PHP, retrieving data

TOTAL PERIODS 30

COURSE OUTCOMES

At the end this course, students will be able to

- analyze the features of free &open source software and Familiarization with LINUX
- implement about Work with PHP
- evaluate the working of MySQL
