NPTEL-AICTE
Faculty Development Programme

(Funded by the MoE, Govt. of India)

This certificate is awarded to

SUDHA DEVI K

for successfully completing the course

Python for Data Science

with a consolidated score of **54** **%**

Prof. Andrew Thangaraj
NPTEL Coordinator
IIT Madras

(Jul-Aug 2023)

Roll No: NPTEL23CS99S45490189

Duration of NPTEL course : 4 Weeks

The candidate has studied the above course through MOOCs mode, has submitted online assignments and passed proctored exams.
This certificate is therefore acceptable for promotions under CAS as per AICTE notifications dated 24th July 2018, similar to other refresher / orientation courses.
F.No. AICTE / RIFD / FDP through MOOCs / 2017-18

NPTEL-AICTE
Faculty Development Programme

(Funded by the MoE, Govt. of India)

This certificate is awarded to

BARATHI C

for successfully completing the course

Physics of Functional Materials & Devices

with a consolidated score of 60 %

Prof. Andrew Thangaraj
NPTEL Coordinator
IIT Madras

PRINCIPAL
PAAVAI ENGINEERING COLLEGE
NH-7, PACHAL Post, NAMAKKAL Dist.

(Jul-Oct 2023)

Roll No: NPTEL23PH34S846001297

Duration of NPTEL course : 12 Weeks

The candidate has studied the above course through MOOCs mode, has submitted online assignments and passed proctored exams.
This certificate is therefore acceptable for promotions under CAS as per AICTE notifications dated 24th July 2018, similar to other refresher / orientation courses.
F.No. AICTE / RIFD / FDP through MOOCs / 2017-18

Nehru Institute of Technology

Abstract:
This article discussed the automatic frequency fluctuation control in an interlinked power network. Power quality issue arises at the time uncertainty in the loading. The power network is framed by two unequal power sources for investigation. By the complexity of the network the maintain the power quality is too much risk. Area one consists of a dish Stirling thermal system (DSTS). Area two has a thermal power plant alone. For automatic frequency stability control, the Load frequency control (LFC) scheme is presented with a secondary controller. In this study proportional integral derivative (PID) controller is recommended. The parameters of PID are optimized by the Dragonfly algorithm (DA) using Integral Time Absolute Error (ITAE) cost function. The DA technique supremacy is proved by comparing the results of the Ant colony optimization (ACO), Differential evolution (DE), Genetic algorithm (GA), and Particle swarm optimization (PSO) technique with DA. The DA - PID controller response is better than the GA, ACO, DE, and PSO techniques. The control response proved the quick oscillation control at 16s, also very minimal peak values.

Abstract

This chapter proposes innovative energy management for intelligent smart grid systems by utilizing a Genetic Algorithm (GA) tuned controller. The smart grid contains renewable energy sources and energy storage units. Renewable energy resource comprises wind

Abstract:
The purpose of this article is to discuss frequency improvement in wind power systems (WPS). The result of the Mayfly algorithm (MA) to frequency enhancement is studied in the WPS with the support of secondary controllers PID and FOPID controllers (proportional-integral-derivative and fractional-order PID). The autonomous WPS includes a battery energy storage system (BESS) to aid the secondary controller. The responsiveness of the suggested approach to frequency variation was investigated in the MATLAB, Simulink working environment with a 1% load disturbance. The control response of the MA-FOPID and PID controllers is compared with the results of standard optimization techniques to show the preeminence of the proposed technique. The evaluation of the results indicates that the MA technique performs better than other optimization techniques for frequency improvement.

Abstract:
This article discussed the automatic frequency fluctuation control in an interlinked power network. Power quality issue arises at the time uncertainty in the loading. The power network is framed by two unequal power sources for investigation. By the complexity of the network the maintain the power quality is too much risk. Area one consists of a dish Stirling thermal system (DSTS). Area two has a thermal power plant alone. For automatic frequency stability control, the Load frequency control (LFC) scheme is presented with a secondary controller. In this study proportional integral derivative (PID) controller is recommended. The parameters of PID are optimized by the Dragonfly algorithm (DA) using Integral Time Absolute Error (ITAE) cost function. The DA technique supremacy is proved by comparing the results of the Ant colony optimization (ACO), Differential evolution (DE), Genetic algorithm (GA), and Particle swarm optimization (PSO) technique with DA. The DA - PID controller response is better than the GA, ACO, DE, and PSO techniques. The control response proved the quick oscillation control at 16s, also very minimal peak values.
