

## COURSE OBJECTIVES

To enable the students to

- understand the concepts and operations of matrix algebra needed for computing graphics modeling
- understand and apply the class of functions which transform a finite set into another finite set which relates to input output functions in computer science
- make the students to think logically and mathematically and apply these techniques in solving problems
- impart discrete knowledge in computer engineering through finite automata
- impart discrete knowledge in computer engineering through Context free Grammars

### UNIT I MATRIX ALGEBRA 15

Matrices, Rank of Matrix, Solving System of Equations-Eigen Values and Eigen Vectors-Inverse of a Matrix  
Cayley Hamilton Theorem

### UNIT II BASIC SET THEORY 15

Basic Definitions - Venn Diagrams and set operations - Laws of set theory - Principle of inclusion and exclusion - partitions- Permutation and Combination - Relations- Properties of relations - Matrices of relations - Closure operations on relations - Functions - injective, subjective and objective functions.

### UNIT III MATHEMATICAL LOGIC 15

Propositions and logical operators - Truth table - Propositions generated by a set, Equivalence and implication - Basic laws- Some more connectives - Functionally complete set of connectives- Normal forms - Proofs in Propositional calculus - Predicate calculus.

### UNIT IV FORMAL LANGUAGES 15

Languages and Grammars-Phrase Structure Grammar-Classification of Grammars-Pumping Lemma for Regular Languages-Context Free Languages.

### UNIT V FINITE STATE AUTOMATA 15

Finite State Automata-Deterministic Finite State Automata(DFA), Non Deterministic Finite State Automata (NFA)- Equivalence of DFA and NFA-Equivalence of NFA and Regular Languages

**TOTAL PERIODS 45+30 75**

## COURSE OUTCOMES

At the end of the course the students would be able to

- understand the basic knowledge of matrix, set theory, functions and relations concepts needed for designing and solving problems
- perform the knowledge of logical operations and predicate calculus needed for computing skill
- design and solve Boolean functions for defined problems
- apply the acquired knowledge of formal languages to the engineering areas like compiler design
- apply the acquired knowledge of finite automata theory and design discrete problems to solve by computers

**COURSE OBJECTIVES**

To enable the students to

- impart the knowledge in the field of digital electronics
- impart knowledge about the various components of a computer and its internals
- design and realize the functionality of the computer hardware with basic gate
- design other components using combinational and sequential logic
- understand the importance of the hardware-software interface

**UNIT I      DIGITAL FUNDAMENTALS      9**

Number Systems and Conversions – Boolean Algebra and Simplification – Minimization of Boolean Functions – Karnaugh Map, **Logic Gates** – NAND – NOR Implementation

**UNIT II      COMBINATIONAL AND SEQUENTIAL CIRCUITS      9**

Design of Combinational Circuits – Adder / Subtractor – Encoder – Decoder – MUX / DEMUX – Comparators, **Flip Flops** – Triggering – Master – Slave Flip Flop – State Diagram and Minimization – Counters – Registers.

**UNIT III      BASIC STRUCTURE OF COMPUTERS & PARALLEL PROCESSING      9**

Functional units – Basic operational concepts – Bus structures – Performance and Metrics – Instruction and instruction sequencing – Addressing modes – **ALU design** – Fixed point and Floating point operation.

**UNIT IV      PROCESSOR DESIGN      9**

Processor basics – **CPU Organization** – Data path design – **Control design** – Basic concepts – **Hard wired control** – **Micro programmed control** – Pipeline control – Hazards – Super scalar operation.

**UNIT V      MEMORY, I/O SYSTEM AND PARALLEL PROCESSING      9**

Memory technology – Memory systems – Virtual memory – Caches – Design methods – Associative memories – Input/output system – Programmed I/O – DMA and Interrupts – I/O Devices and Interfaces - Multiprocessor Organization – Symmetric multiprocessors – Cache Coherence – Clusters: Non Uniform Memory Access - Vector Computation.

**TOTAL PERIODS      45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- design digital circuits by simplifying the Boolean functions
- understand the organization and working principle of computer hardware components
- understand mapping between virtual and physical memory
- acquire knowledge about multiprocessor organization and parallel processing
- trace the execution sequence of an instruction through the processor

**COURSE OBJECTIVES**

To enable the students to

- impart the knowledge in the field of problem solving
- impart knowledge about the various algorithms
- design and apply basic C programming concept
- design other components using combinational and sequential logic
- understand the importance array, structure and pointers

**UNIT I INTRODUCTION TO COMPUTER PROBLEM SOLVING 9**

Introduction – The Problem Solving aspect – Top down design – Implementation of algorithm – Program Verification – The efficiency of algorithms – The analysis of algorithms – Fundamental Algorithms.

**UNIT II PROGRAMMING AND ALGORITHMS 9**

Programs and Programming – building blocks for simple programs -pseudo code representation – flow charts - Programming Languages - compiler –Interpreter, Loader and Linker - Program execution – Classification of Programming Language-Structured Programming Concept.

**UNIT III BASIC OF ‘C’, INPUT / OUTPUT & CONTROL STATEMENTS 9**

Introduction- Identifier – Keywords - Variables – Constants – I/O Statements - Operators - Initialization – Expressions – Expression Evaluation – Lvalues and Rvalues – Type Conversion in C –Formatted input and Output functions - Specifying Test Condition for Selection and Iteration- Conditional Execution - and Selection - Iteration and Repetitive Execution- go to Statement – Nested Loops- Continue and break statements.

**UNIT IV ARRAYS, STRINGS, FUNCTIONS AND POINTERS 9**

Array – One dimensional Character Arrays- Multidimensional Arrays- Arrays of Strings – Two dimensional character array – functions - parameter passing mechanism scope – storage classes – recursion - comparing Iteration and recursion- pointers – pointer operators - uses of pointers- arrays and pointers – pointers and strings - pointer indirection – pointers to functions – Dynamic memory allocation

**UNIT V USER DEFINED DATA TYPES & FILES 9**

Structures – initialization - nested structures – structures and arrays – structures and pointers - union– type def and enumeration types - bit fields - File Management in C – Files and Streams – File handling functions – Sequential access file- Random access file – Command line arguments.

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- design computational solution for a given problem
- break a problem into logical modules that can be solved
- transform a problem solution into programs involving programming constructs
- write programs using structures, strings, array, pointer and files for solving complex computed problems
- introduce modularity using functional and pointers

**COURSE OBJECTIVES**

To enable the students to

- understand an overview of accounting concepts
- know the basics ratio analysis
- understand the knowledge in funds flow statement in accounting
- develop budget and budgetary control concept
- understand and practice of costing concept

|                               |          |
|-------------------------------|----------|
| <b>UNIT I      ACCOUNTING</b> | <b>9</b> |
|-------------------------------|----------|

Definition, Objectives, Advantages, Accounting Concepts, Accounting- Conventions. Methods of Accounting – Single Entry and Double Entry System. – Journal and Ledger – Preparation of Trial Balance.-Final Accounts: Trading and Profit and Loss Account and Balance Sheet of Sole- Proprietary Concern.

|                                    |          |
|------------------------------------|----------|
| <b>UNIT II      RATIO ANALYSIS</b> | <b>9</b> |
|------------------------------------|----------|

Meaning – Advantages – Limitations – Classification of Ratio : Profitability, Turnover and Solvency Ratios.

|                                           |          |
|-------------------------------------------|----------|
| <b>UNIT III      FUNDS FLOW STATEMENT</b> | <b>9</b> |
|-------------------------------------------|----------|

Concept of Funds – Funds flow Statement – Uses and Limitations – Preparation of Fund Flow Statement - Cash Flow Statement

|                                                  |          |
|--------------------------------------------------|----------|
| <b>UNIT IV      BUDGET AND BUDGETARY CONTROL</b> | <b>9</b> |
|--------------------------------------------------|----------|

Meaning and Definition - Objectives of Budgetary - Control, Advantages and Limitations Preparation of Different Types of Budgets.

|                            |          |
|----------------------------|----------|
| <b>UNIT V      COSTING</b> | <b>9</b> |
|----------------------------|----------|

Definition, Nature and Importance Advantages and Limitations of Cost Accounting – Classifications of Cost – Preparation of Cost Sheet- Marginal Costing: Meaning, Advantages Cost – Volume Profit Analysis – Break Even Analysis – Uses and Assumptions – Applications of Marginal Costing.

|                      |           |
|----------------------|-----------|
| <b>TOTAL PERIODS</b> | <b>45</b> |
|----------------------|-----------|

**COURSE OUTCOMES**

At the end of the course the students would be able to

- acquire knowledge about the overview of accounting concepts
- explore the basics ration analysis concept
- learn and understand the funds flow statement
- acquire knowledge in budget and budgetary control
- understand the concept of costing

**COURSE OBJECTIVES**

To enable the students to

- understand the linear and non linear data structures available in solving problems
- know about the sorting and searching techniques and its efficiencies
- get a clear idea about the various algorithm design techniques
- the data structures and algorithms in real time applications
- analyze the efficiency of algorithm

**UNIT I      LINEAR DATA STRUCTURES****9**

Introduction - Abstract Data Types (ADT) – Arrays and its representation – Structures – Stack – Queue – Circular Queue - Applications of stack – Infix to postfix conversion – **evaluation of expression** – Applications of Queue - Linked Lists – Doubly Linked lists – Applications of linked list – Polynomial Addition

**UNIT II      TREE STRUCTURES****9**

Need for non-linear structures – Trees and its representation – Binary Tree – expression trees – Binary tree Traversals – left child right sibling data structures for general trees – applications of trees – **Huffman Algorithm** - Binary search tree.

**UNIT III      BALANCED SEARCH TREES, SORTING AND INDEXING****9**

AVL trees–B-Trees–Sorting–Bubble sort - Quick Sort - Insertion Sort – Heap sort – Hashing - Hashing functions - **Collision Resolution Techniques** - Separate chaining - Open addressing - Multiple hashing.

**UNIT IV      GRAPHS****9**

Definitions – Representation of graph - Graph Traversals - Depth-first traversal – breadth-first traversal - applications of graphs - Topological sort – **shortest-path algorithms – minimum spanning tree – Prim's and Kruskal's algorithms** – biconnectivity – Euler circuits.

**UNIT V      ALGORITHM DESIGN AND ANALYSIS****9**

Algorithm Analysis – Asymptotic Notations - **Divide and Conquer – Merge Sort – Binary Search - Greedy Algorithms – Knapsack Problem** – Dynamic Programming – Warshall's Algorithm for Finding Transitive Closure – Backtracking – Sum of Subset Problem – Branch and Bound – Travelling Salesman Problem.

**TOTAL PERIODS      45****COURSE OUTCOMES**

At the end of the course the students would be able to

- select and apply the data structure to suit any given problem
- design their own data structure according to the application need
- apply the algorithm design techniques to any of the real world problem
- develop any new application with the help of data structures and algorithms
- write efficient algorithm for a given problem and able to analyze its time complexity

**COURSE OBJECTIVES**

To enable the students to

- understand the fundamentals of structures
- understand the fundamentals of file management systems

1. **Display the following:**  
(i) Floyd's triangle (ii) Pascal Triangle
2. **Generate the following series of numbers:**  
(i) Armstrong numbers between 1 to 100  
(ii) Prime numbers between 1 to 50  
(iii) Fibonacci series up to N numbers
3. **Manipulate the strings with following operations.**  
(i) Concatenating two strings  
(ii) Reversing the string  
(iii) Finding the substring  
(iv) Replacing a string  
(v) Finding length of the string
4. **Find the summation of the following series:**  
(i) Sine (ii) Cosine (iii) Exponential
5. **Simulate following Banking operations using functions.**  
(i) Deposit (ii) Withdrawal (iii) Balance Enquiry
6. **Implement using recursion**  
(i) Fibonacci number generation. (ii) Factorial
7. **Generate Student mark sheets using structures.**
8. **Create a collection of books using arrays of structures and do the following:**  
(i) Search a book with title and author name (ii) Sorts the books on title.
9. **Perform string operations using pointers.**
10. **Program to implement dynamic memory** allocation. Creating, Reading and displaying a sequential and random access file.

**TOTAL PERIODS 60**

## COURSE OUTCOMES

At the end of the course the students would be able to

- understand the basic concepts of the programs
- design a program using C functions and structures

| <b>Mapping of Courses Outcomes with Programme Outcomes:</b><br>(1/2/3 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak |                    |     |     |     |     |     |     |     |     |       |       |       |       |       |

**COURSE OBJECTIVES**

To enable the students to

- using the data structures and algorithms in real time applications
- analyze the efficiency of algorithm

1. Polynomial Addition using array
2. Array implementation of stack
3. Array implementation of Queue
4. Infix to postfix conversion
5. Singly Linked List operations
6. Binary tree traversals
7. Quick sort
8. Dictionary application using any of the data structure
9. Find the Shortest Path using Dijkstra's Algorithm – Greedy method
10. Warshall's Algorithm for finding transitive closure using Dynamic programming
11. Sum of subset problem using backtracking

**TOTAL PERIODS      60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- develop any new application with the help of data structures and algorithms
- write efficient algorithm for a given problem and able to analyze its time complexity to apply

| Mapping of Courses Outcomes with Programme Outcomes:<br>(1/2/3 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak |                    |     |     |     |     |     |     |     |     |       |       |       |       |       |

**COURSE OBJECTIVES**

To enable the students to

- understand MS-Office concept
- get a clear idea about the various design techniques

**MS-WORD**

1. Text Manipulations
2. Usage of Numbering, Bullets, Tools and Headers
3. Usage of Spell Check and Find and Replace
4. Text Formatting
5. Picture Insertion and Alignment
6. Creation of Documents Using Templates
7. Creation of Templates
8. Mail Merge Concept
9. Copying Text and Picture From Excel
10. Creation of Tables, Formatting Tables
11. Splitting the Screen
12. Opening Multiple Document, Inserting Symbols in Documents

**MS-EXCEL**

1. Creation of Worksheet and Entering Information
2. Aligning, Editing Data in Cell
3. Excel Function (Date, Time, Statistical, Mathematical, Financial Functions)
4. Changing of Column Width and Row Height (Column and Range of Column)
5. Moving, copying, Inserting and Deleting Rows and Columns
6. Formatting Numbers and Other Numeric Formats
7. Drawing Borders around Cells 8. Creation of Charts Raising Moving
8. Changing Chart Type
9. Controlling the Appearance of a Chart

**MS-POWER POINT (Working With Slides)**

1. Creating, saving, closing presentation
2. Adding Headers and footers
3. Changing slide layout
4. Working fonts and bullets
5. Inserting Clipart
6. Run and Slide Show

## COURSE OUTCOMES

At the end of the course the students would be able to

- design own data according to the application need
- develop any new document with the help of MS office

| Mapping of Courses Outcomes with Programme Outcomes:<br>(1/2/3 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak |                    |     |     |     |     |     |     |     |     |       |       |       |       |       |

**COURSE OBJECTIVES**

To enable the students to

- learn how C++ supports Object Oriented principles such as abstraction, polymorphism etc
- understand and apply the principles hiding, localization and modularity in software development
- use the generic programming features of C++ including the STL
- design and implement reliable and maintainable object-oriented applications
- design and moderate complexity composed of several classes

**UNIT I      FUNDAMENTALS OF OBJECT ORIENTED PROGRAMMING      9**

Object Oriented Programming concepts – Encapsulation – Programming Elements – Program Structure – Enumeration Types — Functions and Pointers – Function Invocation – Overloading Functions – Scope and Storage Class – Pointer Types – Arrays and Pointers – Call-by-Reference – Assertions – Standard template library.

**UNIT II      IMPLEMENTING ADTS AND ENCAPSULATION      9**

Aggregate Type struct–Structure Pointer Operators – **Unions** – Bit Fields – Data Handling and Member Functions – Classes – Constructors and Destructors – Static Member – this Pointer – reference semantics – implementation of simple ADTs.

**UNIT III      POLYMORPHISM      9**

ADT Conversions – **Overloading** – Overloading Operators – Unary Operator Overloading – Binary Operator Overloading – Function Selection – Pointer Operators – Visitation – Iterators – containers – Sequence Containers - List – List Iterators – Associative Containers.

**UNIT IV      TEMPLATESAND FILE HANDLING      9**

Template Class–Function Templates – RTTI Templates - Class Templates – Parameterizing – STL – Algorithms – Function Adaptors – Streams and Formatted I/O – I/O Manipulations -File handling – Random Access

**UNIT V      INHERITANCE      9**

Derived Class– Typing Conversions and Visibility – Code Reuse – **Virtual Functions** – Templates and Inheritance – Run–Time Type Identifications – Exceptions – Handlers – Standard Exceptions.

**TOTAL PERIODS      45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- understand and design the solution to a problem using object-oriented programming concepts
- use proper class protection mechanism to provide security
- demonstrate the use of virtual functions to implement polymorphism
- understand and implement the features of C++ including templates, exceptions and file handling for providing programmed solutions to complex problems
- reuse the code with extensible Class types, User-defined operators and function overloading

**COURSE OBJECTIVES**

To enable the students to

- understand the fundamentals of data models and conceptualize and depict a database system
- understand the fundamentals of ER diagram
- make a study of SQL and relational database design
- know about data storage techniques and query processing
- impart knowledge in transaction processing, concurrency

**UNIT I INTRODUCTION****9**

File systems versus Database systems–Data Models – DBMS Architecture – Data Independence – Data Modeling using Entity – Relationship Model – Enhanced E-R Modeling.

**UNIT II RELATIONAL MODEL AND QUERY EVALUATION****9**

Relational Model Concepts – Relational Algebra – SQL – Basic Queries – Complex SQL Queries – Views – Constraints – Relational Calculus – Tuple Relational Calculus – Domain Relational Calculus – overview of commercial RDBMSs – Database Design – Functional Dependencies – Normal Forms – 1NF – 2NF-3NF-BCNF – 4NF-5NF - Algorithms for Executing Query Operations — Cost Estimation

**UNIT III TRANSACTION PROCESSING****9**

Transaction Processing – Properties of Transactions - Serializability – Transaction support in SQL – Locking Techniques – Time Stamp ordering – Validation Techniques – Granularity of Data Items – Recovery concepts – Shadow paging–Log Based Recovery–Database Security Issues– Access control – Statistical Database Security

**UNIT IV FILES AND INDEXING****9**

File operations–Hashing Techniques – Indexing – Single level and Multi-level Indexes – B+ tree – Static Hashing - Indexes on Multiple Keys.

**UNIT V SPECIAL PURPOSE DATABASES****9**

OODBMS - Object-Based Databases - OO Data Model - OO Languages – Persistence – Object Relational Databases - Temporal Databases – Mobile Databases – Spatial Databases – Case Study for Design and Manage the Database for any Project

**TOTAL PERIODS 45****COURSE OUTCOMES**

At the end of the course the students would be able to

- understand the basic concepts of the database and data models
- design a database using ER diagrams and map ER into Relations and normalize the relations
- acquire the knowledge of query evaluation to monitor the performance of the DBMS
- develop a simple database applications using normalization
- acquire the knowledge about different special purpose databases

**COURSE OBJECTIVES**

To enable the students to

- understand the relationship between system software and machine architecture
- understand the design and implementation of assemblers, linkers and loaders
- understand the design, function and implementation of assemblers, linkers and loaders
- identify the macro processors
- identify the system software tools

**UNIT I INTRODUCTION TO MICROPROCESSORS 9**

Evolution Of Microprocessors-8-Bit Processor-8085 Architecture-Register Organization-Instruction Set- Timing Diagram-Addressing Modes-Interrupts-Interrupt Service Routines-Assembly Language Programming using 8085

**UNIT II INTRODUCTION TO EMBEDDED SYSTEMS 9**

Embedded Systems-Processor Embedded Into A System-Embedded Hardware and Software units-Applications-**Design Process**-Intel 8051 Architecture- Processor and Memory Organization-Interrupts of 8051-Assembly Language Programming using 8051

**UNIT III INTERFACING WITH 8051 9**

Input-Output Interfacing-Bus Standards-PCI-ISA-Timing and Control-Input Output Devices- Serial and Parallel Communication- Motor Control-**Programming Display Devices**-ARM Architecture

**UNIT IV REAL-TIME OPERATING SYSTEM 9**

Inter Process Communication-Signal Functions-Socket Programming-Mail box-Pipes-RTOS-OS Services- Process Management- Timer Function-Event Function-Memory Management-Device, Files and I/O Subsystem-**Basic Design of RTOS**

**UNIT V RTOS PROGRAMMING 9**

Basic Functions-Types of RTOS-**RTOS  $\mu$ COS**-RTLinux-Real Time Linux Functions- Programming with RTLinux-Case Study

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- understand the functionality of 8085 microprocessor
- design and control real time control systems
- incorporate enhanced features in the embedded systems through software
- rectify minor problems by troubleshooting
- acquire the knowledge of real time operating systems and implement real time functions

**COURSE OBJECTIVES**

To enable the students to

- be aware of the evolution and fundamental principles of operating system, processes and their communication
- understand the various operating system components
- know about file management and the distributed file system concepts in operating systems
- be aware of components of operating system with relevant case study
- understand the process management, memory management

**UNIT I INTRODUCTION****9**

Introduction-Types of operating systems-operating systems structures-Systems components operating systems services-System calls-Systems programs-Processes-process concept- process scheduling-operation on processes-co- operating processes-Inter process communications-CPU Scheduling-Scheduling criteria-Scheduling algorithms- Multiple-processor Scheduling

**UNIT II PROCESS SYNCHRONIZATION****9**

Process Synchronization -Critical Section problem -Semaphores-Classical problems of synchronization-critical regions-Monitors-Deadlock Characterization-Deadlock handling-Deadlock Prevention-Deadlock avoidance-Deadlock Detection-Deadlock Recovery –Threads-Multithreading Models

**UNIT III MEMORY MANAGEMENT****9**

Memory Management-Swapping-Contiguous Memory allocation-Paging-Segmentation-Virtual Memory-Demand paging-Page Replacement-Thrashing

**UNIT IV DISK SCHEDULING AND DISTRIBUTED SYSTEMS****9**

Disk Structures-Disk Scheduling-File Systems Interface-File concepts-Access methods-Directory Structures-File System Implementation-File Systems structures-Directory Implementation-Allocation Methods-Free Space management-Distributed File systems-Naming and Transparency-Remote File Accesses- Stateful Versus Stateless Service-File replication

**UNIT V CASE STUDIES****9**

Linux System-design Principles- process management-File Systems-Windows Vista-Systems Structures-Process management-memory management-Android OS-Virtual machine OS

**TOTAL PERIODS 45****COURSE OUTCOMES**

At the end of the course the students would be able to

- understand the operating system components and its services
- implement the algorithms in process management and solving the issues of IPC
- demonstrate the mapping between the physical memory and virtual memory
- understand file handling concepts in OS perspective
- understand the operating system components and services with the recent operating systems

**COURSE OBJECTIVES**

To enable the students to

- understand computational development of graphics with mathematics
- provide in-depth knowledge of display systems, image synthesis, shape modeling of 3D application
- understand basic concepts related to Multimedia including data
- understand the concepts of standards, algorithms and software
- experience development of multimedia software by utilizing existing libraries and descriptions of algorithms

**UNIT I BASIC CONCEPTS 9**

2D Transformations - Clipping – Window - View Prot Mapping - Graphical User Interfaces and Interactive Input Methods – Picture Construction Techniques - Virtual Reality Environment.

**UNIT II 3D GRAPHICS 9**

3D Transformation – 3D Viewing – Visible Surface Detection – Back Face Detection – Depth Buffer Method – Scan Line Method.

**UNIT III MULTIMEDIA BASICS 9**

Introduction to Multimedia – Components – Hypermedia – Authoring – Authoring tools – File formats – Color models – Digital Audio representation – Transmission – Audio signal processing – Digital music making – MIDI – Digital video – Video compression techniques – Video performance measurements – Multimedia Databases – Animation – Key frames and tweening techniques – Principles of animation – Virtual reality – Multimedia for portable devices

**UNIT IV MULTIMEDIA COMMUNICATION 9**

Stream characteristics for Continuous media – Temporal Relationship – Object Stream Interactions – Media Synchronization – Models for Temporal Specifications – Streaming of Audio and Video – Recovering from packet loss – RTSP – Multimedia Communication Standards – RTP/RTCP – SIP and H.263- Real time streaming and On-demand streaming

**UNIT V MULTIMEDIA APPLICATION DEVELOPMENT 9**

Design, Development and evaluation of multimedia a system - The development of user interface design - Design Process - Multimedia & the Internet - Multimedia conferencing - Multimedia file sharing – Multimedia broadcasting - Multimedia Development Issues - Multimedia project - Structured Multimedia development - Multimedia project timing - Sample project

**TOTAL PERIODS 45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- gain proficiency in 3D computer graphics API programming
- enhance the perspective of modern computer system with modelling, analysis and interpretation of 2D and 3D visual information
- understand different realizations of multimedia tools
- develop interactive animations using multimedia tools
- gain the knowledge of different media streams in multimedia transmission

**COURSE OBJECTIVES**

To enable the students to

- learn how C++ supports Object Oriented principles such as abstraction
- understand and apply the principles hiding

1. Write a C++ Program to illustrate Enumeration and Function Overloading
2. Write a C++ Program to illustrate Scope and Storage class
3. Implementation of ADT such as Stack and Queues
4. Write a C++ Program to illustrate the use of Constructors and Destructors and Constructor Overloading
5. Write a Program to illustrate Static member and methods
6. Write a Program to illustrate Bit fields
7. Write a Program to overload as binary operator, friend and member function
8. Write a Program to overload unary operator in Postfix and Prefix form as member and friend function
9. Write a Program to illustrate Iterators and Containers
10. Write a C++ Program to illustrate function templates
11. Write a C++ Program to illustrate template class
12. Write C++ Programs and incorporating various forms of Inheritance
13. Write a C++ Program to illustrate Virtual functions
14. Exception Handling
15. File Handling – Read, Write, Update

**TOTAL PERIODS      60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- understand and design the solution to a problem using object-oriented programming concepts
- use proper class protection mechanism to provide security

**COURSE OBJECTIVES**

To enable the students to

- understand the fundamentals of data models and conceptualize and depict a database system using ER diagram
- make a study of SQL and relational database design

1. Creation of base tables and views.
2. Data Manipulation INSERT, DELETE and UPDATE in Tables. SELECT, Sub Queries and JOIN
3. Data Control Commands
4. High level language extensions – PL/SQL. Or Transact SQL – Packages
5. Use of Cursors, Procedures and Functions
6. Embedded SQL or Database Connectivity.
7. Oracle or SQL Server Triggers – Block Level – Form Level Triggers
8. Working with Forms, Menus and Report Writers for a application project in any domain
9. Front-end tools – Visual Basic/Developer 2000.

**TOTAL PERIODS 60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- understand the basic concepts of the database and data models
- design a database using ER diagrams and map ER into Relations and normalize the relations

**COURSE OBJECTIVES**

To enable the students to

- provide the concept and an understanding of basic concepts in Operations Research
- understand the Techniques for Analysis and Modeling in Computer Applications
- understand, develop and solve mathematical model of linear programming problems
- understand, develop and solve mathematical model of Transport and assignment problems
- understand network modeling for planning and scheduling the project activities

**UNIT I      LINEAR PROGRAMMING MODELS      15**

Mathematical Formulation - Graphical Solution of linear programming models – Simplex method – Artificial variable Techniques- Variants of Simplex method

**UNIT II      TRANSPORTATION AND ASSIGNMENT MODELS      15**

Mathematical formulation of transportation problem- Methods for finding initial basic feasible solution – optimum solution - degeneracy – Mathematical formulation of assignment models – Hungarian Algorithm – Variants of the Assignment problem

**UNIT III      INTEGER PROGRAMMING MODELS      15**

Formulation – Gomory's IPP method – Gomory's mixed integer method – Branch and Bound technique.

**UNIT IV      SCHEDULING BY PERT AND CPM      15**

Network Construction – Critical Path Method – Project Evaluation and Review Technique – Resource Analysis in Network Scheduling

**UNIT V      QUEUEING MODELS      15**

Characteristics of Queuing Models – Poisson Queues -  $(M / M / 1) : (FIFO / \infty / \infty)$ ,  $(M / M / 1) : (FIFO / N / \infty)$ ,  $(M / M / C) : (FIFO / \infty / \infty)$ ,  $(M / M / C) : (FIFO / N / \infty)$  models.

**TOTAL PERIODS      75**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- understand and apply linear, integer programming to solve operational problem with constraints
- apply transportation and assignment models to find optimal solution in warehousing
- prepare project scheduling using PERT and CPM
- identify and analyze appropriate queuing model to reduce the waiting time in queue
- use optimization concepts in real world problems

**COURSE OBJECTIVES**

To enable the students to

- understand networking concepts and basic communication model
- understand network architectures and components required for data communication
- analyze the function and design strategy of physical, data link, network layer and transport layer
- acquire knowledge of various application protocol standard developed for internet
- analyze the trace for the flow of information from one node to another node in the network

**UNIT I INTRODUCTION 9**

Data Communications – Networks – Protocols and Standards. Network Models – OSI Model – Layers – TCP/IP Protocol Suite–Addressing. Digital Transmission – Digital-to-Digital Conversion – Analog-to-Digital Conversion – Transmission Modes. Analog Transmission – Digital-to-Analog Conversion – Analog-to-analog Conversion. Transmission Media – Guided and Unguided Media.

**UNIT II DATA LINK LAYER 9**

Error – detection and correction – Parity – LRC – CRC – Hamming code – Flow Control and Error control – stop and wait – go back-N ARQ – selective repeat ARQ- sliding window – HDLC. - LAN - IEEE 802.4 - IEEE 802.5 IEEE 802.11 – FDDI - SONET – Bridges.

**UNIT III NETWORK LAYER 9**

Internetworks–Circuit Switching- Packet Switching and Datagram approach – IP addressing methods– Subnetting – Routing – Distance Vector Routing – Link State Routing – BGP -Routers.

**UNIT IV TRANSPORT LAYER 9**

Duties of transport layer – Multiplexing – Demultiplexing – Sockets – User Datagram Protocol (UDP) – Transmission Control Protocol (TCP) – Congestion Control – Quality of services (QOS) – Integrated Services.

**UNIT V APPLICATIONS 9**

Domain Name Space (DNS) – SMTP – FTP – HTTP - WWW – Security – Cryptography.

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- identify the components required to build different types of networks
- understand the functionalities needed for data communication into layers
- choose the required functionality at each layer for given application
- understand the working principles of various application protocols
- acquire knowledge about security issues and services available

**COURSE OBJECTIVES**

To enable the students to

- understand the phases in a software project and activities in project management
- comprehend the purpose of different UML diagrams
- understand the major considerations in collecting, documenting and analyzing project requirements
- cognize the activities in the crucial phase of system design
- identify the key phases in the recent trends of RUP and agile development

|                            |          |
|----------------------------|----------|
| <b>UNIT I INTRODUCTION</b> | <b>9</b> |
|----------------------------|----------|

Introduction to Software Engineering-Concepts-Software engineering development activities-Managing software development

|                                  |          |
|----------------------------------|----------|
| <b>UNIT II MODELING WITH UML</b> | <b>9</b> |
|----------------------------------|----------|

**UML Diagrams:** Use Case Diagrams - Class Diagrams – Interaction Diagrams - State Machine Diagrams - Activity Diagrams. Modeling Concepts - Diagram Organization - Diagram Extension

|                                           |          |
|-------------------------------------------|----------|
| <b>UNIT III REQUIREMENTS AND ANALYSIS</b> | <b>9</b> |
|-------------------------------------------|----------|

**Requirements Elicitation** - Concepts - Activities & Managing Requirements Elicitation - **Analysis:** Concepts - Analysis Activities - Analysis Model

|                              |          |
|------------------------------|----------|
| <b>UNIT IV SYSTEM DESIGN</b> | <b>9</b> |
|------------------------------|----------|

Decomposing the System - Addressing Design Goals - Reusing Patterns - Specifying Interfaces - Mapping Models to Code

|                                                              |          |
|--------------------------------------------------------------|----------|
| <b>UNIT V AGILE DEVELOPMENT AND RATIONAL UNIFIED PROCESS</b> | <b>9</b> |
|--------------------------------------------------------------|----------|

Rational Unified Process Key Features - Software Best Practices – Static Structure – Dynamic Structure. Agile Development: Adapting to Scrum - Patterns for Adopting to Scrum - New Roles – Changed Roles – Sprints - Product Backlogs - Teamwork

|                      |           |
|----------------------|-----------|
| <b>TOTAL PERIODS</b> | <b>45</b> |
|----------------------|-----------|

**COURSE OUTCOMES**

At the end of the course the students would be able to

- conceive the basics concepts of object oriented software engineering
- use Knowledge documentation for object oriented software engineering using UML
- analyze Problem and alternative solutions using object oriented software engineering approach
- manage Software process and build software engineering teams based on engineering approach
- acquire knowledge about security issues and services available

**COURSE OBJECTIVES**

To enable the students to

- understand the concept of ERP
- comprehend the purpose of Enterprise Systems
- understand the major process of ERP
- cognize the activities in Integration
- identify the key phases in the recent trends of ERP development

**UNIT I INTRODUCTION TO ERP 9**

ERP essentials – ERP evolution – ERP market – ERP tiers – information systems – Presentation tier – Application tier – database tier.

**UNIT II ENTERPRISE SYSTEMS 9**

Enterprise systems – stand alone mainframe systems – client server architecture – service oriented architecture – types of enterprise systems – types of data – SAP overview.

**UNIT III PROCESS IN ERP 9**

Basic Procurement process – physical flow – document flow – information flow – financial impact - role of enterprise systems in the procurement process – fulfillment process – production process.

**UNIT IV INTEGRATION 9**

Integrated processes – Integrated processes execution – additional intra company processes – extended (intracompany) processes.

**UNIT V CASE STUDY 9**

ERP for construction industry – ERP for a corrugated box manufacturing company – ERP for lens making company–ERP for furniture manufacturing company – ERP for toys manufacturing company - Mc Donald's story – Automobile enterprises.

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- conceive the basics concepts of ERP
- use Knowledge documentation for Enterprise Systems
- analyze Problem and Process in ERP
- manage Integration of ERP
- acquire knowledge about security issues and services available

**COURSE OBJECTIVES**

To enable the students to

- understand an overview of oops concepts
- know the basics of java, AWT and String handling
- understand the knowledge in java spring framework and able to develop programs used
- develop programs in java and java swings
- understand and practice web development techniques on client-side and server side

**UNIT I FUNDAMENTALS OF JAVA****9**

Introduction to java-Features of java-basic-Access controls-Static and fixed methods-Inner classes-String class-Inheritance-Overriding- methods- Using Super- Abstract classes-Packages-Interfaces-Exception Handling-Threads.

**UNIT II I/O STREAMS****9**

The Java I/O Classes and Interfaces, the Stream Classes. The Byte Streams: InputStream, OutputStream, File InputStream, FileOutputStream, PrintStream, DataInputStream, DataOutputStream. The Character Streams: Reader, Writer, FileReader, FileWriter, CharArrayReader, CharArrayWriter, BufferedReader, BufferWriter,

**UNIT III APLET AND AWT****9**

AWT package – Layouts – Containers – Event Package – Event Model – Garbage Collection– Multithreading – Language Packages.

**UNIT III JDBC & RMI****9**

JDBC – Introduction to JDBC and its components – implementing JDBC in Applet in – Introduction to RMI – Structure of RMI–implementing RMI Request scope

**UNIT V SWINGS****9**

GUI Programming with Java -Introduction to swings, JLabel, ImageIcon, JTextField, JButton, JToggleButton, JChekcBoxes, JRadioButtons, JTabbedPane, JScrollPane, JList, JComboBox, JTrees, JTable.

**TOTAL PERIODS 45****COURSE OUTCOMES**

At the end of the course the students would be able to

- acquire knowledge about the overview on oops concepts
- explore the basics of java, AWT and String handling
- learn and design in java spring framework and able to develop programs using it
- acquire knowledge in java and java swings
- able to design web development techniques on client-side and server side

**COURSE OBJECTIVES**

To enable the students to

- understand and practice the various fields such as analysis, design, development testing
  - develop skills to construct software of high quality with high reliability
1. Practicing the different types of case tools such as Rational Rose / other Open Source to be used for all the phases of Software development life cycle.
  2. Data modeling
  3. Source code generators
  4. Apply the following to typical application problems:
    - a. Project Planning
    - b. Software Requirement Analysis
    - c. Software Design
    - d. Data Modeling & Implementation
  5. Software Estimation
  6. Software Testing
  7. A possible set of applications may be the following:
    - a. Library System
    - b. Student Marks Analyzing System
    - c. Text Editor.
    - d. Create a dictionary.
    - e. Telephone directory.
    - f. Inventory System.

**TOTAL PERIODS 60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- model software projects into high level design using DFD,UML diagrams
- measure the product and process performance using various metrics

**COURSE OBJECTIVES**

To enable the students to

- understand and practice basics of java, AWT and String handling
- understand and practice of JSP and java Servlet

1. Writing Java programs by making use of class, interface, package, etc for the following

- Different types of inheritance study
- Uses of 'this' keyword
- Polymorphism
- Creation of user specific packages
- User specific exception handling

2. Write programs in Java for event handling Mouse and Keyboard events.

3. Write programs in Java to manipulate Text Area, Canvas, Scroll Bars, Frames and Menus using AWT.

4. Write programs in Java using Layout Manager create different applications

5. Create an application using Java Applets.

6. Database using JDBC concept

7. Applications in RMI concept

8. Event Handling concept using Swing

**TOTAL PERIODS 60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- explore the features and create interactive web pages using them
- acquire knowledge about the JSP and Servlet programs

| Mapping of Courses Outcomes with Programme Outcomes:<br>(1/2/3 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak |                          |     |     |     |     |     |     |     |     |       |       |       |       |       |

**COURSE OBJECTIVES**

To enable the students to

- develop the ability to communicate effectively in spoken english
- draft flawless resume in English and participate successfully in group discussions
- enhance their soft skills and interpersonal skill
- equip the learners to make effective presentations on topics in engineering and technology

**UNIT I FORMAL & INFORMAL CONVERSATION PRACTICE****6**

Role Play1- with family members, neighbours, friends, relatives etc. Simple Expressions – agreeing / disagreeing, persuading, wishing, consoling, advising, arguing, expressing opinions etc - Professional dialogues with the superiors-Conversation with different professionals- Situations like - Government and Corporate Offices, Official Meetings, Educational Institutions, (At the railway junction, malls, post office, bank) etc.

**UNIT II ORAL REVIEW, RADIO SHOW & NARRATIVE TECHNIQUES****6**

Oral review of movies and discussion or sharing the view on various concepts of the movie, Presentation of various radio programs like news, announcements, advertisements, entertainment programs etc. as a team activity, Understanding the basic narrative techniques-Narrating short stories with message, Narrating real life experiences.

**UNIT III RÉSUMÉ / LETTER WRITING****6**

Preparation of résumé-structure – use of words and language style – Types of letter – structure of a letter – format for writing letters – use of language in letters

**UNIT IV RESENTATION SKILLS&GROUP DISCUSSION****6**

Elements of effective presentation – Structure of presentation - Presentation tools – Voice modulation – effective use to presentation tools - Audience analysis - Body language – Video samples- Importance of GD – GD in selection process - Structure of GD – Moderator – led and other GDs - Strategies in GD – Team work – Body Language - Mock GD -Video samples

**UNIT V INTERVIEW SKILLS****6**

Kinds of interviews – Required Key Skills – Corporate culture – Mock interviews-Video samples.

**TOTAL PERIODS 30****COURSE OUTCOMES**

At the end of the course the students would be able to

- speak effectively and confidently in English.
- attend job interviews with confidence
- write effective job applications with resume
- participate in GD with involvement and confidence

**COURSE OBJECTIVES**

To enable the students to

- learn the .NET framework concept and understand the syntax of basic C# Programs
- learn C# elements and OOPS concepts
- learn fundamentals of window application programming and how to create a window applications
- develop web based applications and learn advanced features of C#
- understand the foundation of CLR execution

**UNIT I INTRODUCTION TO C# 8**

Introducing C#, Understanding .NET, Overview of C#, Literals, Variables, Data Types, Operators, Expressions, Branching, Looping, Methods, Arrays, Strings, Structures, Enumerations.

**UNIT II OBJECT ORIENTED ASPECTS OF C# 9**

Classes, Objects, Inheritance, Polymorphism, Interfaces, Operator Overloading, Delegates, Events, Errors and Exceptions.

**UNIT III APPLICATION DEVELOPMENT ON .NET 8**

Building Windows Applications, IDE, Standard Controls, Application Model, Accessing Data with ADO.NET-ADO .NET Architecture, Automatically generating SQL Statements

**UNIT IV WEB BASED APPLICATION DEVELOPMENT ON .NET 8**

Programming Web Applications with Web Forms - ASP.Net, Programming Web Services, Asynchronous Communication

**UNIT V THE CLR AND THE .NET FRAMEWORK 12**

Assemblies, Versioning, Attributes, Reflection, Viewing MetaData, Type Discovery, Reflecting on a Type, Marshaling, Remoting, Understanding Server Object Types, Specifying a Server with an Interface, Building a Server, Building the Client, Using SingleCall, Threads.

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- use Visual Studio .NET to implementing the .NET application and to Know the basic C# elements
- know the C# OOPS Concepts
- know the basic ADO.NET structures and Understand the ADO.NET database connectivity
- understand the ASP.NET Programming Model and able to create ASP pages for web applications
- understand the internal functions of CLR and develop Web based applications on .NET CLR

**COURSE OBJECTIVES**

To enable the students to

- expose the students to the concepts of Data warehousing Architecture and Implementation
- understand Data mining principles and techniques and Introduce DM as a cutting edge business intelligence
- understand the concept of classification for the retrieval purposes
- know the clustering techniques in details for better organization and retrieval of data
- identify Business applications and Trends of Data mining

**UNIT I DATA WAREHOUSE****8**

Data Warehousing-Operational Database Systems vs. Data Warehouses-Multidimensional Data Model - Schemas for Multidimensional Databases – OLAP Operations – **Data Warehouse Architecture** – Indexing – OLAP queries & Tools.

**UNIT II DATA MINING & DATA PREPROCESSING****9**

Introduction to KDD process – Knowledge Discovery from Databases - Need for Data Pre-processing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.

**UNIT III ASSOCIATION RULE MINING****8**

Introduction-Data Mining Functionalities-Association Rule Mining - Mining Frequent Item Sets with and without Candidate Generation - **Mining Various Kinds of Association Rules** - Constraint-Based Association Mining.

**UNIT IV CLASSIFICATION & PREDICTION****10**

Classification vs. Prediction–Data preparation for Classification and Prediction – Classification by Decision Tree Introduction–Bayesian Classification – Rule Based Classification – Classification by Back Propagation – Support Vector Machines – Associative Classification – Lazy Learners – **Other Classification Methods** – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – **Ensemble Methods** – **Model Section.**

**UNIT V CLUSTERING****10**

Cluster Analysis:-Types of Data in Cluster Analysis–**A Categorization of Major Clustering Methods**– **Partitioning Methods** – **Hierarchical methods** – **Density-Based Methods** – **Grid-Based Methods** – **Model-Based Clustering Methods** – Clustering High- Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

**TOTAL PERIODS****45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- understanding the Store voluminous data for online processing
- prepare the Pre-process the data for mining applications
- learn the association rules for mining the data
- practice and deploy appropriate classification techniques
- understand the high dimensional data for better organization of the data

**COURSE OBJECTIVES**

To enable the students to

- understand and practice mark-up languages
- know of how to do project using PHP
- understand and practice embedded dynamic scripting on client side Internet Programming
- understand and practice of PYTHON concept
- understand and practice web development techniques on client-side and server side

**UNIT I      MARKUP LANGUAGE      9**

Introduction to HTML and HTML5-Formatting and Fonts-Commenting Code– Anchors – Backgrounds – Images – Hyperlinks – Lists – Tables – Frames - HTML Forms.

**UNIT II      STYLE SHEET      9**

The need for CSS, Introduction to CSS – Basic syntax and structure - Inline Styles – Embedding Style Sheets - Linking External Style Sheets – Backgrounds - Manipulating text - Margins and Padding - Positioning using CSS.

**UNIT III      INTRODUCTION TO PHP      9**

PHP Introduction-Basic Development concept-types-Variables-Constants-Expressions-Operators-Control Structures-Arrays-Function

**UNIT IV      HANDLING FORM & SESSION HANDLING      9**

Handling form with GET and POST – Cookies – Session – Server Variables

**UNIT V      INTRODUCTION TO PYTHON      9**

The basic elements of python-Branching Programs-Control Structures-Strings-Functions and scoping-Tuples-Lists and Dictionaries-Lists and Mutability-Functions as Objects

**TOTAL PERIODS      45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- acquire knowledge about functionalities of scripting language
- explore mark-up languages features and create interactive web pages using them
- learn and design Client side validation using PHP scripting languages
- acquire knowledge about Open source PYTHON libraries
- able to design front end web page and connect to the back end databases

**COURSE OBJECTIVES**

To enable the students to

- introduce the broad perceptive of cloud architecture and model to understand the concept
- understand the features of cloud simulator
- apply different cloud programming model as per need
- learn to design the trusted cloud Computing system
- address the core issues of cloud computing such as security, privacy and interoperability

**UNIT I CLOUD ARCHITECTURE AND MODEL 9**

Technologies for Network-Based System – System Models for Distributed and Cloud Computing – NIST Cloud Computing Reference Architecture. **Cloud Models**:- Characteristics – Cloud Services – Cloud models (IAAS, PAAS, SAAS) – Public vs Private Cloud –Cloud Solutions - Cloud ecosystem – Service management – Computing on demand.

**UNIT II VIRTUALIZATION 9**

Basics of Virtualization - Types of Virtualization - Implementation Levels of Virtualization – Virtualization Structures - **Tools and Mechanisms** - Virtualization of CPU, Memory, I/O Devices - Virtual Clusters and Resource management – Virtualization for Data-centre Automation.

**UNIT III CLOUD INFRASTRUCTURE 9**

Architectural Design of Compute and Storage Clouds – Layered Cloud Architecture Development – **Design Challenges** - Inter Cloud Resource Management – Resource Provisioning and Platform Deployment – Global Exchange of Cloud Resources.

**UNIT IV PROGRAMMING MODEL 9**

Parallel and Distributed Programming Paradigms – MapReduce , Twister and Iterative MapReduce – Hadoop Library from Apache – Mapping Applications - Programming Support - Google App Engine, Amazon AWS - **Cloud Software Environments** -Eucalyptus, Open Nebula, OpenStack, Aneka, CloudSim

**UNIT V SECURITY IN THE CLOUD 9**

Security Overview – Cloud Security Challenges and Risks – Software-as-a-Service Security – Security Governance – Risk Management – Security Monitoring – Security Architecture Design – Data Security – Application Security – Virtual Machine Security - Identity Management and Access Control – Autonomic Security.

**TOTAL PERIODS 45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- compare the strengths and limitations of cloud computing
- identify the architecture, infrastructure and delivery models of cloud computing
- apply suitable virtualization concept
- choose the appropriate cloud player, Programming Models and approach
- design Cloud Services and Set a private cloud

**COURSE OBJECTIVES**

To enable the students to

- learn the cost estimation techniques during the analysis of the project
- understand the quality concepts for ensuring the functionality of the software

1. Programs using Branching, Looping.
2. Programs using Methods, Arrays, Strings.
3. Programs using Structures, Enumerations.
4. Programs using Inheritance.
5. Programs using Polymorphism.
6. Programs using Interfaces.
7. Programs using Operator overloading.
8. Programs using Delegates, Events, Errors and Exceptions.
9. Program to Build an Calculator widget
10. Programs Using Multi Module Assembly
11. Programs using application development on .net.
12. Programs using Web applications.

**TOTAL PERIOD      60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- learn the risk management activities and the resource allocation for the projects
- can apply the software estimation and recent quality standards for evaluation of the software projects

**COURSE OBJECTIVES**

To enable the students to

- understand and practice embedded dynamic scripting on client side Internet Programming
- understand and practice of PHP and Python concept

1. Create a web page with the following using HTML5
  - a. To embed an image map in a web page
  - b. To fix the hot spots
  - c. Show all the related information when the hot spots are clicked.
2. Create a web page with all types of Cascading style sheets.
3. Use of conditional statements in PHP
4. Use of looping statements in PHP
5. Creating different types of arrays
6. Usage of array functions
7. Creating user defined functions
8. Creating simple webpage using PHP
9. Use of conditional statements in Python
10. Use of looping statements in Python
11. Creating different types of arrays in Python
12. Usage of array functions in Python
13. Creating user defined functions in Python

**COURSE OUTCOMES**

At the end of the course the students would be able to

- explore mark-up languages features and create interactive web pages using them
- acquire knowledge about Open source PHP and Python libraries

The goal of this course is to train the students to critically evaluate a well-defined set of research subjects and to summarize the findings concisely in a paper of scientific quality. The paper will be evaluated based on the ability to understand a topic, communicate it and identify the issues. Results from this term paper will be presented to Fellow students and a committee of faculty members.

1. Every student selects a topic related to current trends and the same should be approved by the respective committee. This selection should have at least 5 distinct primary sources.
2. Every student must write a short review of the topic and present it to fellow students and faculty (discuss the topic – expose the flaws – analyze the issues) every week.
3. The faculty should evaluate the short review and award marks with respect to the following.
  - a. Has the student analyzed – not merely quoted – the most significant portions of the primary sources
  - b. Employed?
  - c. Has the student offered original and convincing insights?
  - d. Plagiarism to be checked.
4. Every student should re-submit and present the review article including issues/ comments/ conclusions which had arisen during the previous discussion.
5. Every student should submit a final paper as per project specifications along with all short review reports (at least 4 internal reviews) and corresponding evaluation comments.
6. Every student should appear for a final external review exam to defend themselves.

**COURSE OBJECTIVES**

To enable the students to

- understand the basic programming concepts in Android
- relate the need of the different User interface component in an application
- identify the components beyond User Interface and use them in an application
- gain an basic understanding of the architecture of iOS and design an application
- understand the basic concepts related to Windows mobile applications

|               |                     |          |
|---------------|---------------------|----------|
| <b>UNIT I</b> | <b>INTRODUCTION</b> | <b>8</b> |
|---------------|---------------------|----------|

Introduction to mobile applications - Mobility landscape - Mobile platforms - Mobile apps development – Publishing and delivery of mobile applications – Requirements gathering and validation for mobile applications – Market and business drivers for mobile application

|                |                                                   |          |
|----------------|---------------------------------------------------|----------|
| <b>UNIT II</b> | <b>UI DESIGN &amp; APP DEVELOPMENT IN ANDROID</b> | <b>9</b> |
|----------------|---------------------------------------------------|----------|

App user interface designing – mobile UI resources (Layout, UI elements, Draw-able, Menu), Activity – states and life cycle, interaction amongst activities – Threads – Async Task –Services – state and life cycle – Notifications.

|                 |                                                          |           |
|-----------------|----------------------------------------------------------|-----------|
| <b>UNIT III</b> | <b>APP FUNCTIONALITYBEYOND USER INTERFACE IN ANDROID</b> | <b>10</b> |
|-----------------|----------------------------------------------------------|-----------|

Broadcast receivers, Telephony and SMS APIs– Shared preferences – Mobile databases using SQLite – Content Providers – Animation – Multimedia-Audio/Video Playback and Recor Location Awareness – Native Hardware Access (Sensors such as Accelerometer and Gyroscope).

|                |                                |          |
|----------------|--------------------------------|----------|
| <b>UNIT IV</b> | <b>MOBILE TECHNOLOGY – iOS</b> | <b>9</b> |
|----------------|--------------------------------|----------|

Introduction to Objective C – IOS features – UI implementation – Touch frameworks – Data Persistence using Core Data and SQLite – Location awareness using Core location and Map kit Integrating calendar and address book with social media application – Using Wifi – iPhone market place.

|               |                                    |          |
|---------------|------------------------------------|----------|
| <b>UNIT V</b> | <b>MOBILE TECHNOLOGY – WINDOWS</b> | <b>9</b> |
|---------------|------------------------------------|----------|

Intro to Windows RT 8.1 , Windows phone Runtime – Tiles and Toasts – Push notifications – Launchers and Choosers – Alarms & Reminders - Context Menu – Dialogs – Flyouts – AppBar – Working with Sensors- REST fundamentals – Windows Store app Certification.

|                      |           |
|----------------------|-----------|
| <b>TOTAL PERIODS</b> | <b>45</b> |
|----------------------|-----------|

**COURSE OUTCOMES**

At the end of the course the students would be able to

- explain the architecture, platform and tools required for mobile application
- explore Hadoop distributed system and its components
- design applications using map reducing concept
- install and utilize Hadoop tool
- understanding the Framework applications

**COURSE OBJECTIVES**

To enable the students to

- understand the Bigdata concept
- understand mining data stream system
- understand the Hadoop concept
- understand usage of file systems
- understand how to build up framework

|               |                                 |          |
|---------------|---------------------------------|----------|
| <b>UNIT I</b> | <b>INTRODUCTION TO BIG DATA</b> | <b>8</b> |
|---------------|---------------------------------|----------|

Introduction to BigData Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data- Analytic Processes and Tools - Analysis vs Reporting - Modern Data Analytic Tools

|                |               |          |
|----------------|---------------|----------|
| <b>UNIT II</b> | <b>HADOOP</b> | <b>9</b> |
|----------------|---------------|----------|

History of Hadoop- The Hadoop Distributed File System – Components of Hadoop- Analyzing the Data with Hadoop- Scaling Out- Hadoop Streaming- **Design of HDFS**-Java interfaces to HDFS- Basics

|                 |                   |           |
|-----------------|-------------------|-----------|
| <b>UNIT III</b> | <b>MAP REDUCE</b> | <b>10</b> |
|-----------------|-------------------|-----------|

Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures - Job Scheduling- **Shuffle and Sort** – Task execution - Map Reduce Types and Formats- Map Reduce Features

|                |                           |          |
|----------------|---------------------------|----------|
| <b>UNIT IV</b> | <b>HADOOP ENVIRONMENT</b> | <b>9</b> |
|----------------|---------------------------|----------|

**Setting up a Hadoop Cluster**-Cluster specification-Cluster Setup and Installation- Hadoop Configuration- Security in Hadoop- Administering Hadoop – HDFS - Monitoring-Maintenance-Hadoop benchmarks- Hadoop in the cloud

|               |                   |          |
|---------------|-------------------|----------|
| <b>UNIT V</b> | <b>FRAMEWORKS</b> | <b>9</b> |
|---------------|-------------------|----------|

**Applications on Big Data Using Pig and Hive** – Data processing operators in Pig – Hive services – HiveQL – Querying Data in Hive - fundamentals of HBase and ZooKeeper - IBM InfoSphereBigInsights and Streams. Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications

|                      |           |
|----------------------|-----------|
| <b>TOTAL PERIODS</b> | <b>45</b> |
|----------------------|-----------|

**COURSE OUTCOMES**

At the end of the course the students would be able to

- identify the need for big data analytics for a domain
- explore Hadoop distributed system and its components
- design applications using Map Reducing Concepts
- install and utilize Hadoop tool.
- understanding the Framework applications

**COURSE OBJECTIVES**

To enable the students to

- provide students with a theoretical as well as practical understanding of agile software development practices and how small teams can apply them to create high-quality software
- understanding of software design and a set of software technologies and APIs
- detailed examination and demonstration of Agile development and testing techniques
- benefits and pitfalls of working in an Agile team
- understand Agile development and testing

**UNIT I      AGILE METHODOLOGY      9**

Theories for Agile management – agile software development – traditional model vs. agile model – classification of agile methods – agile manifesto and principles – agile project management – agile team interactions – ethics in agile teams - agility in design, testing – agile documentations – agile drivers, capabilities and values

**UNIT II      AGILE PROCESSES      9**

Lean production - SCRUM, Crystal, Feature Driven Development, Adaptive Software Development, Extreme Programming: Method overview – lifecycle – **work products, roles and practices**

**UNIT III      AGILITY AND KNOWLEDGE MANAGEMENT      9**

Agile information systems – agile decision making - Earl's schools of KM – institutional knowledge evolution cycle – development, acquisition, refinement, distribution, deployment , leveraging – KM in software engineering – managing software knowledge – challenges of migrating to agile methodologies – agile knowledge sharing – role of story-cards – Story-card Maturity Model (SMM)

**UNIT IV      AGILITY AND REQUIREMENTS ENGINEERING      9**

**Impact of agile processes in RE** – current agile practices – variance – overview of RE using agile – managing unstable requirements – requirements elicitation – agile requirements abstraction model – requirements management in agile environment, agile requirements prioritization – agile requirements modeling and generation – concurrency in agile requirements generation

**UNIT V      AGILITY AND QUALITY ASSURANCE      9**

Agile product development – Agile Metrics – Feature Driven Development (FDD) – **Financial and Production Metrics in FDD** – Agile approach to Quality Assurance - Test Driven Development – Agile approach in Global Software Development

**TOTAL PERIODS      45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- importance of interacting with business stakeholders in determining the requirements for a software system
- iterative software development processes: how to plan them, how to execute them
- the impact of social aspects on software development success
- techniques and tools for improving team collaboration and software quality
- software process improvement as an ongoing task for development teams
- how agile approaches can be scaled up to the enterprise level

**COURSE OBJECTIVES**

To enable the students to

- understand the platform and tool available for developing mobile application
  - gain the basics about micro browser based applications in Android to access the Internet
1. Add a spinner. When the spinner is selected, there should be three option(e.g., android, java, testing). When you click on each option, it should go to another page containing some other components. Each of these pages should have a “back” button, which on pressing will take you back to the page with the spinner
  2. Program a calculator
  3. Add two EditText. When a number is entered in Edit Text 1, the square of that number should be displayed in Edit Text 2 as a separate Activity.
  4. Create applications to include Action Bar, Menus, Dialogs and Notifications in Android.
  5. Create a camera application, where you can click a picture and then save it as the wallpaper.
  6. Create a user login form and registration form. First time users have to register through the registration form and the details should be stored in the database. Then they can login using the login page.
  7. Create an application that works with Android Content Provider, which searches, add, change and remove content of MIME types.
  8. Create a media player, which plays an mp3 song and will record the sound.
  9. Create a thread, which performs a single task, and perform multithreading in Android.
  10. Create Animation apps like a. Bouncing ball b. Moving arrow

**TOTAL PERIODS 60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- develop useful mobile applications for the current scenario in mobile computing
- construct applications that use animation, media players, and content providers

**COURSE OBJECTIVES**

To enable the students to

- provide fundamental concepts of Service Oriented Architecture
- gain knowledge about SOAP, UDDI and XML to create web services

1. XML document creation.
2. Importing and Exporting XML document in database.
3. XSL Transformation
4. Internal and External DTD creation
5. XML Schema creation
6. Parsing XML document using DOM/SAX parser.
7. Web Service creation using JAX-WS
8. Web Service creation using JAX-RS
9. Web Service creation using .NET
10. JAXB Marshaling and Unmarshaling

A possible set of applications may be the following:

- a. Currency Conversion
- b. Temperature Conversion
- c. Ticket Booking
- d. Dictionary

**TOTAL PERIODS 60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- known about the basic principles of service oriented architecture, its components and techniques
- understand the architecture of web services

**COURSE OBJECTIVES**

To enable the students to

- team Project with a maximum of two in a team
- students shall select a domain and develop an application with social relevance

**TOTAL PERIODS 60**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- understand the students shall select a domain and develop an application with social relevance
- documentation is to be based on the standards

**COURSE OBJECTIVES**

To enable the students to

- apply the fundamentals knowledge for understating state of the art information about any topic relevant to curriculum
- identify specific problem for the current need of the society and collecting information related to the same through detailed review of literatures
- develop the methodology to solve the identified problems
- prepare the project report and face reviews and viva-voce examination

**SYLLABUS**

The student individually works on a specific topic approved by faculty members who is familiar in this area of interest. The student can select any topic which is relevant to his/her specialization of the programme. The topic may be experimental or analytical or case studies. At the end of the semester, a detailed report on the work done should be submitted which contains clear definition of the identified problem, detailed literature review related to the area of work and methodology for carrying out the work. The student will be evaluated through a viva-voce examination by a panel of examiners

**TOTAL PERIODS 180**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- review communication engineering and problems available in literature
- select appropriate techniques to analyze the complex communication engineering problems
- apply engineering and management principles through efficient handling of project
- write a detailed report about the topic in the prescribed format

**COURSE OBJECTIVES**

To enable the students to

- understand an overview of accounting concepts
- know the basics ratio analysis
- understand the knowledge in funds flow statement in accounting
- develop budget and budgetary control concept
- understand and practice of costing concept

|                               |          |
|-------------------------------|----------|
| <b>UNIT I      ACCOUNTING</b> | <b>9</b> |
|-------------------------------|----------|

Definition, Objectives, Advantages, Accounting Concepts, Accounting- Conventions. Methods of Accounting – Single Entry and Double Entry System. – Journal and Ledger – Preparation of Trial Balance.-Final Accounts: Trading and Profit and Loss Account and Balance Sheet of Sole- Proprietary Concern.

|                                    |          |
|------------------------------------|----------|
| <b>UNIT II      RATIO ANALYSIS</b> | <b>9</b> |
|------------------------------------|----------|

Meaning – Advantages – Limitations – Classification of Ratio : Profitability, Turnover and Solvency Ratios.

|                                           |          |
|-------------------------------------------|----------|
| <b>UNIT III      FUNDS FLOW STATEMENT</b> | <b>9</b> |
|-------------------------------------------|----------|

Concept of Funds – Funds flow Statement – Uses and Limitations – Preparation of Fund Flow Statement- – Cash Flow Statement

|                                                  |          |
|--------------------------------------------------|----------|
| <b>UNIT IV      BUDGET AND BUDGETARY CONTROL</b> | <b>9</b> |
|--------------------------------------------------|----------|

Meaning and Definition - Objectives of Budgetary - Control, Advantages and Limitations Preparation of Different Types of Budgets.

|                            |          |
|----------------------------|----------|
| <b>UNIT V      COSTING</b> | <b>9</b> |
|----------------------------|----------|

Definition, Nature and Importance Advantages and Limitations of Cost Accounting – Classifications of Cost — Preparation of Cost Sheet- Marginal Costing: Meaning, Advantages Cost – Volume Profit Analysis – Break Even Analysis – Uses and Assumptions – Applications of Marginal Costing.

|                      |           |
|----------------------|-----------|
| <b>TOTAL PERIODS</b> | <b>45</b> |
|----------------------|-----------|

**COURSE OUTCOMES**

At the end of the course the students would be able to

- acquire knowledge about the overview of accounting concepts
- explore the basics ration analysis concept
- learn and understand the funds flow statement
- acquire knowledge in budget and budgetary control
- able to understand the concept of costing

**COURSE OBJECTIVES**

To enable the students to

- understand the basics of cryptography
- learn to find the vulnerabilities in programs and to overcome them,
- know the different kinds of security threats in networks and its solution
- know the different kinds of security threats in databases and solutions available
- learn about the models and standards for security

**UNIT I      ELEMENTARY CRYPTOGRAPHY      9**

Terminology and Background – Substitution Ciphers – Transpositions – Making Good Encryption Algorithms- Data Encryption Standard- AES Encryption Algorithm – Public Key Encryption – Cryptographic Hash Functions – Key Exchange – Digital Signatures – Certificates .

**UNIT II      PROGRAM SECURITY      9**

Secure programs – Non-malicious Program Errors – Viruses – Targeted Malicious code – Controls Against Program Threat – Control of Access to General Objects – User Authentication – Good Coding Practices – Open Web Application Security Project Flaws – Common Weakness Enumeration Most Dangerous Software Errors

**UNIT III      SECURITY IN NETWORKS      9**

Threats in networks – Encryption – Virtual Private Networks – PKI – SSH – SSL – IPSec – Content Integrity – Access Controls – Wireless Security – Honeypots – Traffic Flow Security – Firewalls – Intrusion Detection Systems – Secure e-mail.

**UNIT IV      SECURITY IN DATABASES      9**

Security requirements of database systems – Reliability and Integrity in databases –Redundancy – Recovery – Concurrency/ Consistency – Monitors – Sensitive Data – Types of disclosures – Inference-finding and confirming SQL injection

**UNIT V      SECURITY MODELS AND STANDARDS      9**

Secure SDLC – Secure Application Testing – Security architecture models – Trusted Computing Base – Bell-LaPadula Confidentiality Model – Biba Integrity Model – Graham-Denning Access Control Model – Harrison - Ruzzo-Ulman Model – Secure Frameworks – COSO – CobiT – Compliances – PCI DSS – Security Standards - ISO 27000 family of standards – NIST.

**TOTAL PERIODS      45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- apply cryptographic algorithms for encrypting and decryption for secure data transmission
- understand the importance of Digital signature for secure e-documents exchange
- understand the program threats and apply good programming practice
- get the knowledge about the security services available for internet and web applications
- understand data vulnerability and sql injection

**COURSE OBJECTIVES**

To enable the students to

- understand the existing network architecture models and analyze the performance
- understand the high speed network protocols and design issues
- learn gaming engine design
- learn Network Security Technologies and Protocols
- study various protocols in wireless LAN, MAN

**UNIT I FUNDAMENTALS OF NETWORKING STANDARDS AND PROTOCOLS 9**

Network Communication Architecture and Protocols - OSI Network Architecture seven Layers Model - Definition and Overview of TCP/IP Protocols - **TCP/IP Four Layers Architecture Model** - Other Network Architecture Models: IBM SNA

**UNIT II ROUTED AND ROUTING PROTOCOLS 9**

Application Layer Protocols-Presentation Layer Protocols- Session Layer Protocols – Transport Layer Protocols - Network Layer Protocols - Data Link Layer Protocols - Routing Protocols - Multicasting Protocols - MPLS.

**UNIT III GAMING ENGINE DESIGN 9**

Overview of ISDN – **Channels** – User access – Protocols Network management requirements – Network monitoring – Network control – SNMP V<sub>1</sub>, V<sub>2</sub> and V<sub>3</sub> – Concepts, MIBs – Implementation issues-RMON.

**UNIT IV SECURITY AND TELEPHONY PROTOCOLS 9**

Network Security Technologies and Protocols - AAA Protocols - Tunneling Protocols – Security Protocols- Private key encryption – Data encryption system, public key encryption – RSA – Elliptic curve cryptography– Authentication mechanisms– Web security -Secured Routing Protocols - IP telephony -Voice over IP and VOIP Protocols –Signaling Protocols- **Media/CODEC**.

**UNIT V NETWORK ENVIRONMENTS AND PROTOCOLS 9**

Wide Area Network and WAN Protocols - Frame relay - **ATM** - Broadband Access Protocols –PPP Protocols - Local Area Network and LAN Protocols - Ethernet Protocols - **Virtual LAN Protocols -Wireless LAN Protocols** - Metropolitan Area Network and MAN Protocol - Storage Area Network and SAN Protocols.

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- study, analyze and design seven layers of protocols of wired and wireless networks
- design Cloud Services and Set a private cloud
- analyze design implementation issues
- design ISDN and Network Protocols
- implement the broadband access protocol

**COURSE OBJECTIVES**

To enable the students to

- understand an overview of software testing concepts
- know the basics analysis of quality assurance
- understand the knowledge in activity planning
- develop the risk management concept
- understand and practice of software quality assurance

**UNIT I INTRODUCTION 9**

Software Projects various other types of projects - Problems with software projects - an overview of project-planning - Project evaluation - Project Analysis and technical planning - Project estimates - Preparation of Estimates - COCOMO model - Function Point Analysis - Putnam Model - Non-development overheads.

**UNIT II ACTIVITY PLANNING 9**

Project schedules - Sequencing and scheduling projects - Network planning models - Shortening project duration Identifying critical activities.

**UNIT III RISK MANAGEMENT 9**

Resource allocation - Monitoring and Control - Managing people and organizing teams - Planning for small projects- Handling large projects - Divide and Conquer - Software Project survival.

**UNIT IV SOFTWARE CONFIGURATION MANAGEMENT 9**

Basic functions, responsibilities, standards, configuration Management, Prototyping - Models of prototyping.

**UNIT V SOFTWARE QUALITY ASSURANCE 9**

Quality and the quality system - standards and procedures - Technical activities – components - Continuous Improvement - Software Tasks - Management responsibility - Quality System - Contract Review – Document Control - Product identification and trace ability.

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- acquire knowledge about the overview of software testing concepts
- explore the basics activity planning concept
- learn and understand the risk management concept
- acquire knowledge in software configuration management control
- able to understand the software quality assurance

**COURSE OBJECTIVES**

To enable the students to

- understand the concepts of Game design and development
- learn the processes, mechanics and issues in Game Design
- be exposed to the Core architectures of Game Programming
- know about Game programming platforms, frame works and engines
- learn to develop games

|               |                                         |          |
|---------------|-----------------------------------------|----------|
| <b>UNIT I</b> | <b>3D GRAPHICS FOR GAME PROGRAMMING</b> | <b>9</b> |
|---------------|-----------------------------------------|----------|

3D Transformations, Quaternions, 3D Modeling and Rendering, Ray Tracing, Shader Models, Lighting, Color, Texturing, Camera and Projections, Culling and Clipping, Character Animation, Physics-based Simulation, Scene Graphs.

|                |                           |          |
|----------------|---------------------------|----------|
| <b>UNIT II</b> | <b>GAME ENGINE DESIGN</b> | <b>9</b> |
|----------------|---------------------------|----------|

Game engine architecture, Engine support systems, Resources and File systems, Game loop and real-time simulation, Human Interface devices, Collision and rigid body dynamics, Game profiling.

|                 |                         |          |
|-----------------|-------------------------|----------|
| <b>UNIT III</b> | <b>GAME PROGRAMMING</b> | <b>9</b> |
|-----------------|-------------------------|----------|

Application layer, Game logic, Game views, managing memory, controlling the main loop, loading and caching game data, User Interface management, Game event management.

|                |                                    |          |
|----------------|------------------------------------|----------|
| <b>UNIT IV</b> | <b>NG PLATFORMS AND FRAMEWORKS</b> | <b>9</b> |
|----------------|------------------------------------|----------|

2D and 3D Game development using Flash, DirectX, Java, Python, Game engines – DX Studio, Unity.

|               |                         |          |
|---------------|-------------------------|----------|
| <b>UNIT V</b> | <b>GAME DEVELOPMENT</b> | <b>9</b> |
|---------------|-------------------------|----------|

Developing 2D and 3D interactive games using DirectX or Python – Isometric and Tile Based Games, Puzzle games, Single Player games, Multi Player games.

|                      |           |
|----------------------|-----------|
| <b>TOTAL PERIODS</b> | <b>45</b> |
|----------------------|-----------|

**COURSE OUTCOMES**

At the end of the course the students would be able to

- discuss the concepts of Game design and development
- design the processes, and use mechanics for game development
- explain the Core architectures of Game Programming
- use Game programming platforms, frame works and engines
- create interactive Games

**COURSE OBJECTIVES**

To enable the students to

- learn the modeling and design of databases
- acquire knowledge on parallel and distributed databases and its applications
- study the usage and applications of Object Oriented database
- understand the principles of intelligent databases
- understand the usage of advanced data models

**UNIT I      PARALLEL AND DISTRIBUTED DATABASES      9**

**Database System Architectures:** Centralized and Client-Server Architectures – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – **Design of Parallel Systems**- Distributed Database Concepts – Distributed Data Storage–Distributed Transactions–Commit Protocols – Concurrency Control – Distributed Query Processing – Case Studies

**UNIT II      OBJECT AND OBJECT RELATIONAL DATABASES      9**

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: ODMG Model – ODL –OQL – Object Relational and Extended – Relational Systems: Object Relational features in SQL/Oracle – Case Studies.

**UNIT III      INTELLIGENT DATABASES      9**

Active Databases: **Syntax and Semantics** (Starburst, Oracle, DB2)- Taxonomy- **Applications**- Design Principles for Active Rules- Temporal Databases: Overview of Temporal Databases- TSQL2- Deductive Databases: **Logic of Query Languages** – Datalog- Recursive Rules-Syntax and Semantics of Datalog Languages- Implementation of Rules and Recursion- Recursive Queries in SQL- Spatial Databases- Spatial Data Types- Spatial Relationships - Spatial Data Structures- Spatial Access Methods- Spatial DB Implementation.

**UNIT IV      ADVANCED DATA MODELS      9**

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models -Concurrency Control - Transaction Commit Protocols - Multimedia Databases- Information Retrieval- Data warehousing- Data Mining- Text Mining.

**UNIT V      EMERGING TECHNOLOGIES      9**

XML Databases: XML-Related Technologies-XML Schema- XML Query Languages-Storing XML in Databases -XML and SQL- **Native XML Databases**- **Web Databases**- Geographic Information Systems- Biological Data Management- Cloud Based Databases: Data Storage Systems on the Cloud- Cloud Storage Architectures-Cloud Data Models- Query Languages- Introduction to Big Data-Storage-Analysis.

**TOTAL PERIODS      45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- select the appropriate high performance database like parallel and distributed database
- model and represent the real world data using object oriented database
- design a semantic based database to meaningful data access
- embed the rule set in the database to implement intelligent databases
- represent the data using XML database for better interoperability

**COURSE OBJECTIVES**

To enable the students to

- understand an overview of Linux concepts
- know the basics analysis of buffer cache
- understand the knowledge in system calls
- develop the system process concept
- understand and practice of memory management concept

**UNIT I INTRODUCTION 9**

General Review of the System-History-System structure-User Perspective-Operating System Services-Assumptions About Hardware. Introduction to the Kernel-Architecture- System Concepts-Data Structures-System Administration.

**UNIT II ANALYSIS OF BUFFER CACHE 9**

The Buffer Cache-Headers-Buffer Pool-Buffer Retrieval-Reading and Writing Disk Blocks - Advantages and Disadvantages Internal Representation of Files-Inodes- Structure-Directories-Path Name to Inode - Super Block - Inode Assignment-Allocation of Disk Blocks -Other File Types

**UNIT III SYSTEM CALLS 9**

System Calls for the File System-Open-Read-Write-Lseek-Close-Create-Special files Creation -Change Directory and Change Root-Change Owner and Change Mode-Stat- Fstat-Pipes-Dup-Mount-Unmount- Link-Unlink-File System Abstraction-Maintenance.

**UNIT IV SYSTEM PROCESSES 9**

The System Representation of Processes-States-Transitions-System Memory-Context of a Process-Saving the Context -Manipulation of a Process Address Space-Sleep Process Control-signals-Process Termination-Awaiting -Invoking other Programs-The Shell-System Boot and the INIT Process.

**UNIT V MEMORY MANAGEMENT 9**

Memory Management Policies-Swapping-Demand Paging-a Hybrid System-I/O- Subsystem-Driver Interfaces-Disk Drivers-Terminal Drivers.

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- acquire knowledge about the overview of Linux concepts
- explore the basics of buffer cache concept
- learn and understand the system calls concept
- acquire knowledge in memory management control
- able to understand the concept of costing

**COURSE OBJECTIVES**

To enable the students to

- know how modern high performance processors are organized their strengths and weaknesses
- study about the architecture of parallel systems
- understand scope of parallel computing
- learn parallel algorithms design
- gain depth knowledge about the analytical parallel algorithms

**UNIT I      MODERN PROCESSORS      9**

**Stored-program computer architecture** – General-purpose cache-based microprocessor architecture – Memory hierarchies - Multicore processors - Multithread processors - Vector processors – Basic optimization techniques for serial code - Common sense optimizations - Simple measures – large impact - Role of compilers.

**UNIT II      PARALLEL COMPUTERS      9**

Data access optimization - Balance analysis and light speed estimates - Storage order - Taxonomy of parallel computing paradigms - Shared memory computers - Distributed memory computers - Hierarchical systems – Networks - Basics of parallelization- Parallelism – Parallel scalability

**UNIT III      INTRODUCTION TO PARALLEL COMPUTING      9**

Motivating parallelism - Scope of parallel computing - Parallel programming platforms: Implicit parallelism trends in microprocessor architectures - Limitations-Dichotomy - Physical organizations - Communication costs – Routing mechanisms for interconnected networks- Impact of process.

**UNIT IV      PRINCIPLES OF PARALLEL ALGORITHM DESIGN      9**

Preliminaries - **Decomposition techniques** - Characteristics of tasks and interactions – Mapping techniques for load balancing-Methods for containing interaction overheads- **Parallel algorithm models** - Basic Communication operations.

**UNIT V      SORTING AND GRAPH ALGORITHMS      9**

**Dense matrix Algorithm:** Matrix-vector multiplication - Matrix-matrix multiplication- Issues in sorting on parallel computing - Sorting networks - Bubble sorts and its variants - Quick sort – Graph algorithms – Definition and representation - **Prims algorithm - Dijkstra's algorithm** - All pairs shortest path - Transitive closure – Connected components.

**TOTAL PERIODS      45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- apply basic principles and practices of Computer Science and Engineering research
- design a system, component, or process to meet desired needs within realistic constraints
- apply routing mechanisms for interconnected networks
- analyze algorithm models
- identify, analyze, formulate and solve engineering problems

**COURSE OBJECTIVES**

To enable the students to

- know of how to do project planning for the software process
- learn the cost estimation techniques during the analysis of the project
- understand the quality concepts for ensuring the functionality of the software
- understand the knowledge and skills needed for the construction of highly reliable software project
- understand to create reliable, replicable cost estimation that links to the requirements of project planning and managing

**UNIT I SOFTWARE PROJECT MANAGEMENT CONCEPTS 9**

Introduction to Software Project Management: An Overview of Project Planning: Select Project, Identifying Project scope and objectives, infrastructure, project products and Characteristics. Estimate efforts, Identify activity risks, and Allocate resources.

**UNIT II SOFTWARE EVALUATION AND COSTING 9**

Project Evaluation: Strategic Assessment, Technical Assessment, cost-benefit analysis, Cash flow forecasting, Cost - **benefit evaluation techniques**, Risk Evaluation. Selection of Appropriate Project approach: Choosing Technologies, choice of process models, Structured methods.

**UNIT III SOFTWARE ESTIMATION TECHNIQUES 9**

Software Effort Estimation: Problems with over and under estimations, Basis of software Estimation, Software estimation techniques, expert Judgment, Estimating by analogy. Activity Planning: Project schedules, projects and activities, sequencing and scheduling Activities, **networks planning models, formulating a network model**.

**UNIT IV RISK MANAGEMENT 9**

Risk Management: Nature of Risk, Managing Risk, **Risk Identification and Analysis**, Reducing the Risk. Resource Allocation: Scheduling resources, Critical Paths, Cost scheduling, Monitoring and Control: Creating Framework, cost monitoring, prioritizing monitoring.

**UNIT V SOFTWARE QUALITY MANAGEMENT 9**

TQM, Six Sigma, Software Quality: **defining software quality**, ISO9126, External Standards, Comparison of Project management software's: dot Project, Launch pad, OpenProject. Case study:PRINCE2

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- understand the activities during the project scheduling of any software application
- learn the risk management activities and the resource allocation for the projects
- can apply the software estimation and recent quality standards for evaluation of the software projects
- acquire knowledge and skills needed for the construction of highly reliable software project
- able to create reliable, replicable cost estimation that links to the requirements of project planning

**COURSE OBJECTIVES**

To enable the students to

- learn the fundamentals of database tuning
- study the indexing mechanisms for organizing data
- understand the significance of Query Optimization
- learn to troubleshoot database issues
- understand the need for time series and distributed databases

**UNIT I      FUNDAMENTALS OF TUNING      9**

**Review of relational databases** – Relational algebra - Locking and concurrency control – Correctness consideration – Lock tuning – Logging and the recovery subsystem – Principles of recovery – Tuning the recovery subsystem – Operating systems considerations – Hardware tuning

**UNIT II      INDEX TUNING      9**

Types of queries – Data structures – B tree – B+ Tree - Hash structures – Bit map indexes – Clustering indexes – Non clustering indexes – Composite indexes – Hot tables – Comparison of indexing and hashing techniques

**UNIT III      QUERY OPTIMIZATION      9**

Techniques - Tuning relational systems – Normalization – Tuning denormalization – Clustering two tables – Aggregate maintenance–Record layout–Query tuning–Triggers–Client server mechanisms–Objects, application tools and performance – Tuning the application interface – Bulk loading data – Accessing multiple databases

**UNIT IV      TROUBLESHOOTING      9**

**Query plan explainers** – Performance monitors – Event monitors – Finding “Suspicious” queries – Analyzing a query’s access plan – Profiling a query execution – DBMS subsystems

**UNIT V      CASE STUDIES      9**

Transaction chopping – Time series databases – Understanding access plans – Configuration parameters: Oracle; SQL Server; DB2 UDB – Distributed database - Implementation

**TOTAL PERIODS      45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- analyze different execution plans for queries
- analyze different execution tuning for queries
- create an execution plan for a query to reduce the execution time
- optimize the retrieval in query processing
- analyze the query response using data dictionaries

**COURSE OBJECTIVES**

To enable the students to

- learn the key aspects of Soft computing
- know about the components and building block hypothesis of Genetic algorithm
- understand the features of neural network and its applications
- study the fuzzy logic components
- gain insight onto Neuro Fuzzy modeling and control.

**UNIT I INTRODUCTION TO SOFT COMPUTING 9**

Evolution of Computing - Soft Computing Constituents – From Conventional AI to Computational Intelligence - Machine Learning Basics

**UNIT II GENETIC ALGORITHMS 9**

Introduction, Building block hypothesis, working principle, Basic operators and Terminologies like individual, gene, encoding, fitness function and reproduction, Genetic modeling: Significance of Genetic operators, Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, GA optimization problems, **JSP** (Job Shop Scheduling Problem), **TSP** (Travelling Salesman Problem), Differences & similarities between GA & other traditional methods, Applications of GA.

**UNIT III NEURAL NETWORKS 9**

**Machine Learning using Neural Network**, Adaptive Networks – Feed Forward Networks – Supervised Learning Neural Networks – Radial Basis Function Networks - Reinforcement Learning – Unsupervised Learning Neural Networks – Adaptive Resonance Architectures – Advances in neural networks.

**UNIT IV FUZZY LOGIC 9**

**Fuzzy Sets** – Operations on Fuzzy Sets – Fuzzy Relations – Membership Functions-Fuzzy Rules and Fuzzy Reasoning – Fuzzy Inference Systems – Fuzzy Expert Systems – Fuzzy Decision Making

**UNIT V NEURO-FUZZY MODELING 9**

Adaptive Neuro-**Fuzzy Inference Systems** – Coactive Neuro-Fuzzy Modeling – Classification and Regression Trees – Data Clustering Algorithms – Rule base Structure Identification – Neuro-Fuzzy Control – Case Studies.

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- implement machine learning through neural networks
- gain Knowledge to develop Genetic Algorithm and Support vector machine based machine learning system
- write Genetic Algorithm to solve the optimization problem
- understand fuzzy concepts and develop a Fuzzy expert system to derive decisions
- model Neuro Fuzzy system for data clustering and classification

**COURSE OBJECTIVES**

To enable the students to

- understand the basics of Ad-hoc & Sensor Networks
- learn various fundamental and emerging protocols of all layers in ad-hoc network
- study about the issues pertaining to major obstacles in establishment and efficient management of ad-hoc and sensor networks
- understand the nature and applications of ad-hoc and sensor networks
- understand various security practices and protocols of Ad-hoc and Sensor Networks

**UNIT I      ADHOC NETWORKS FUNDAMENTALS AND MAC PROTOCOLS      9**

Fundamentals Of WLans – **IEEE 802.11 Architecture** - Self Configuration And Auto Configuration Issues in Ad-Hoc Wireless Networks – MAC Protocols For Ad-Hoc Wireless Networks – Contention Based Protocols - TCP Over Ad-Hoc Networks-TCP Protocol Overview - TCP And MANETs – Solutions For TCP Over Ad-Hoc Networks.

**UNIT II      ADHOC NETWORK ROUTING AND MANAGEMENT      9**

**Routing in Ad-Hoc Networks**- Introduction -Topology based versus Position based Approaches - Proactive, Reactive, Hybrid Routing Approach - Principles and issues – Location services – DREAM – Quorums based Location Service – Grid – Forwarding Strategies – Greedy Packet Forwarding – Restricted Directional Flooding - Hierarchical Routing- Other Routing Protocols.

**UNIT III      SENSOR NETWORK COMMUNICATION PROTOCOLS      9**

**Introduction–Architecture- Single Node Architecture – Sensor Network Design Considerations – Energy Efficient Design Principles for WSN's** – Protocols for WSN – Physical Layer – **Transceiver Design Considerations** – MAC Layer Protocols – IEEE 802.15.4 Zigbee – Link Layer and Error Control Issues – Routing Protocols – Mobile Nodes and Mobile Robots - Data Centric & Contention Based Networking – Transport Protocols & QoS – Congestion Control Issues – Application Layer Support.

**UNIT IV      SENSOR NETWORK MANAGEMENT AND PROGRAMMING      9**

**Sensor Management** - Topology Control Protocols and Sensing Mode Selection Protocols - Time Synchronization - Localization and Positioning – Operating Systems and Sensor Network Programming – Sensor Network Simulators.

**UNIT V      SOFTWARE TESTING AND QUALITY METRICS      9**

Security in Ad-Hoc and Sensor Networks – Key Distribution and Management – Software based Antitamper Techniques – Water Marking techniques – Defense against Routing Attacks – Secure Adhoc Routing Protocols – Broadcast Authentication WSN Protocols – **TESLA** – Biba – Sensor Network Security Protocols – SPINS

**TOTAL PERIODS      45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- work with existing Ad-hoc and sensor network protocols and standards
- create a Sensor network environment for different type of applications
- design ad-hoc and sensor network architectures using QOS and Congestion control mechanisms
- interpret the various control fields of the protocol in each layer
- select appropriate routing algorithms for different network environments

**COURSE OBJECTIVES**

To enable the students to

- acquire knowledge in Python and R programming
- develop Python programs with conditionals and loops and data structures
- learn how to design and programs Python applications
- learn how to build and package Python modules for reusability
- understand and practice web development techniques on client-side and server side

**UNIT I INTRODUCTION TO PYTHON PROGRAMMING 9**

Python interpreter and interactive mode; values and types variables, expressions, statements, tuple assignment, Order of operations, comments, debugging; **modules and functions**: function Calls, adding new functions, Definitions and Uses, flow of execution, parameters and arguments. Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, range, break, continue, pass; recursion; Strings: string slices, immutability, string and methods, string module; Lists as arrays.

**UNIT II LISTS, TUPLES, DICTIONARIES 9**

Lists: Traversing a List, list operations, list slices, **list methods**, Map, Filter and Reduce, list loop, mutability, aliasing, cloning lists, list parameters; Dictionaries: operations and methods; advanced list processing - list comprehension; Tuples: tuple assignment, tuple as return value.

**UNIT III FILES, MODULES, PACKAGES: 9**

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and Exceptions, handling exceptions, modules, packages: **PANDAS, NUMPY, SCIKIT-LEARN**;

**UNIT IV INTRODUCTION TO R PROGRAMMING: 9**

Introduction and Preliminaries, numbers and vectors, Objects, their modes and attributes, Ordered and unordered factors, Arrays and matrices, Lists and data frames, Grouping, loops and conditional execution, functions.

**UNIT V STATISTICAL MODELS, GRAPHICAL PROCEDURES, PACKAGES 9**

**Statistical models : Defining statistical models; formulae, Linear models, Generic functions for extracting model information, Analysis of variance and model comparison, Updating fitted models, Generalized linear models, Nonlinear least squares and maximum likelihood models; Graphical procedures: High-level and low-level plotting commands, graphics parameters and list, Dynamic graphics. Packages: Standard packages, Contributed packages and CRAN, Namespaces.**

**TOTAL PERIODS 45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- problem solving and programming capability
- construct and execute basic programs in Python
- use external libraries and packages with Python
- construct and execute basic programs in R using programming techniques
- use external R-packages in statistical and graphics

**COURSE OBJECTIVES**

To enable the students to

- learn the basic issues, policy and challenges in the Internet
- understand the components and the protocols in Internet
- build a small low cost embedded system with the internet
- understand the various modes of communications with internet
- learn to manage the resources in the Internet

**UNIT I INTRODUCTION****9**

Definition–phases – Foundations – Policy– Challenges and Issues - identification - security –privacy Components in internet of things: Control Units – Sensors – Communication modules –Power Sources – Communication Technologies – RFID – Bluetooth – Zigbee – Wifi – Rflinks –Mobile Internet – Wired Communication

**UNIT II PROGRAMMING THE MICROCONTROLLER FOR IOT****9**

Basics of Sensors and actuators – examples and working principles of sensors and actuators –Cloud computing and IOT – Arduino/Equivalent Microcontroller platform – Setting up the board - Programming for IOT – Reading from Sensors Communication: Connecting microcontroller with mobile devices – communication through Bluetooth and USB – connection with the internet using wifi / ethernet

**UNIT III RESOURCE MANAGEMENT IN THE INTERNET OF THINGS****9**

Clustering - Software Agents - Data Synchronization - Clustering Principles in an Internet of Things Architecture -The Role of Context- Design Guidelines -Software Agents for Object – Data Synchronization- Types of Network Architectures - Fundamental Concepts of Agility and Autonomy- Enabling Autonomy and Agility by the Internet of Things-Technical Requirements for Satisfying the New Demands in Production - The Evolution from the RFID-based EPC Network to an Agent based Internet of Things- Agents for the Behavior of Objects

**UNIT IV BUSINESS MODELS FOR THE INTERNET OF THINGS****9**

The Meaning of DiY in the Network Society- Sensor-actuator Technologies and Middleware as a Basis for a DiY Service Creation Framework-Device Integration - Middleware Technologies Needed for a DiY Internet of Things Semantic Interoperability as a Requirement for DiY Creation -Ontology- Value Creation in the Internet of Things -Application of Ontology Engineering in the Internet of Things-Semantic Web-Ontology - The Internet of Things in Context of EURIDICE – Business Impact

**UNIT V FROM THE INTERNET OF THINGS TO THE WEB OF THINGS****9**

Resource-oriented Architecture and Best Practices-Designing REST ful Smart Things– Webenabling Constrained Devices - The Future Web of Things - Set up cloud environment – send data from microcontroller to cloud – Case studies – Open Source e-Health sensor platform – Be Close Elderly monitoring – Other recent projects.

**TOTAL PERIODS 45**

## COURSE OUTCOMES

At the end of this course the students will be able to

- identify the components of IOT
- design a portable IOT using appropriate boards
- program the sensors and controller as part of IOT
- develop schemes for the applications of IOT in real time scenarios
- establish the communication to the cloud through wifi/ Bluetooth

**COURSE OBJECTIVES**

To enable the students to

- understand the machine learning theory
- implement linear and non-linear learning models
- implement distance-based clustering techniques
- build tree and rule based models
- apply reinforcement learning techniques

**UNIT I FOUNDATIONS OF LEARNING 9**

**Components of learning** – learning models – geometric models – probabilistic models – logic models – grouping and grading – learning versus design – types of learning – supervised – unsupervised – reinforcement – theory of learning – feasibility of learning – error and noise – training versus testing – theory of generalization – generalization bound – approximation generalization tradeoff – bias and variance – learning curve

**UNIT II LINEAR MODELS 9**

Linear classification – univariate linear regression – multivariate linear regression – beyond regularized regression – Logistic regression – perceptions – multilayer neural networks – learning neural networks structures – support vector machines – soft margin SVM – going linearity – generalization and over fitting – regularization – validation

**UNIT III DISTANCE-BASED MODELS 9**

Nearest neighbor models – K-means – **clustering around medoids** – silhouettes – hierarchical clustering – k-d trees – locality sensitive hashing – non-parametric regression ensemble learning – bagging and random forests – boosting – meta learning

**UNIT IV TREE AND RULE MODELS 9**

Decision trees – learning decision trees – ranking and probability estimation trees – regression trees – clustering trees – learning ordered rule lists – learning unordered rule lists – descriptive rule learning – association rule mining – first-order rule learning

**UNIT V REINFORCEMENT LEARNING 9**

Passive reinforcement learning – **direct utility estimation** – adaptive dynamic programming – temporal-difference learning – active reinforcement learning – exploration – learning an action utility function – Generalization in reinforcement learning – policy search – applications in game playing – applications in robot control

**TOTAL PERIODS 45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- explain theory underlying machine learning
- construct algorithms to learn linear and non-linear models
- implement data clustering algorithms
- construct algorithms to learn tree and rule-based models
- apply reinforcement learning techniques

**COURSE OBJECTIVES**

To enable the students to

- understand the basic concepts of health care system
- know about creating and maintaining health care information systems
- understand information architecture
- ensure access of clinical information system on the fly
- understand IT governance and assessment of health care information system

**UNIT I INTRODUCTION 9**

Introduction to health care information – Health care data quality – Health care information regulations, laws and standards.

**UNIT II HEALTH CARE INFORMATION SYSTEMS 9**

History and evolution of health care information systems – Current and emerging use of clinical information systems – system acquisition – System implementation and support.

**UNIT III INFORMATION TECHNOLOGY 9**

Information architecture and technologies that support health care information systems – Health care information system standards – Security of health care information systems.

**UNIT IV MANAGEMENT OF IT CHALLENGES 9**

Organizing information technology services – IT alignment and strategic planning – IT governance and management.

**UNIT V IT INITIATIVES 9**

Management's role in major IT initiatives – Assessing and achieving value in health care information systems. Case study

**TOTAL PERIODS 45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- develop an understanding of basic research skills applicable to the design
- apply evaluation and implementation of appropriate Healthcare Information Systems (HIS)
- analyze the impact, strengths and weaknesses of various HIS in any healthcare settings
- write reports on the roles of HIS and their impact on facilitating superior healthcare delivery Design a suitable HIS architecture
- use research methods and analysis together to plan the successful implementation of an appropriate HIS solution

**COURSE OBJECTIVES**

To enable the students to

- acquire knowledge to adopt green computing practices to minimize negative impacts on the environment
- skill in energy saving practices in their use of hardware
- examine technology tools that can reduce paper waste and carbon footprint by user
- analyze the green compliance
- understand how to minimize equipment disposal requirements

**UNIT I FUNDAMENTALS****9**

Green IT Fundamentals: Business, IT, and the Environment – Green computing: carbon foot print, scoop on power – Green IT Strategies: Drivers, Dimensions, and Goals – Environmentally Responsible Business: Policies, Practices, and Metrics.

**UNIT II GREEN ASSETS AND MODELING****9**

Green Assets: Buildings, Data Centers, Networks, and Devices – Green Business Process Management: Modeling, Optimization, and Collaboration – Green Enterprise Architecture– Environmental Intelligence- Green Supply Chains – Green Information Systems: Design and Development Models.

**UNIT III GRID FRAMEWORK****9**

**Virtualizing of IT systems** – Role of electric utilities, Telecommuting, teleconferencing and teleporting – Materials recycling – Best ways for Green PC – Green Data center – Green Grid framework.

**UNIT IV GREEN COMPLIANCE****9**

Socio-cultural aspects of Green IT – Green Enterprise Transformation Roadmap – Green Compliance: Protocols, Standards, and Audits – Emergent Carbon Issues: Technologies and Future.

**UNIT V GREEN TECHNOLOGY****9**

The Environmentally Responsible Business Strategies (ERBS) – Case Study Scenarios for Trial Runs – Case Studies – **Applying Green IT Strategies and Applications to a Home, Hospital, Packaging Industry and Telecom Sector.**

**TOTAL PERIODS 45****COURSE OUTCOMES**

At the end of the course the students would be able to

- acquire knowledge to adopt green computing practices to minimize negative impacts on the environment
- apply green business process management
- analyze GRID framework
- skill in energy saving practices in their use of hardware concept
- understand the technology tools that can reduce paper waste and carbon footprint by user

**COURSE OBJECTIVES**

To enable the students to

- understand the importance of human resources
- describe the steps involved in the human resource planning process
- understand the stages of employee socialization and training needs
- know about the purposes of performance management systems and appraisal
- know the list of occupational safety and health administration enforcement priorities

**UNIT I      FUNDAMENTALS OF HRM      9**

Introduction- importance of HRM – functions- qualities of HR manager – evolution and growth of HRM – trends and opportunities - HRM in global environment – legal and ethical context – laws for discriminatory practices – equal opportunity employment.

**UNIT II      STAFFING, RECRUITMENT AND SELECTION      9**

HR Policies - need, type and scope - human resource planning - job analysis - recruiting goals – recruiting sources – global perspective – selection process – pre-employment testing – interviews – job offers – hiring mistakes - key element for successful predictors.

**UNIT III      TRAINING AND DEVELOPMENT      9**

Socialization – new employee orientation, training, development – organizational development – methods – evaluating training– international training and development issues – career development - value for organization and individual – mentoring and coaching – traditional career stages

**UNIT IV      PERFORMANCE EVALUATION, REWARDS AND BENEFITS      9**

Appraisal process – methods – factors distort appraisal – team appraisal – international appraisal – rewards – Theories of motivation - compensation administration – job evaluation and pay structure – special cases of compensation – executive compensation programs – employee benefits.

**UNIT V      SAFE AND HEALTHY WORK ENVIRONMENT      9**

Occupational safety and health act - issues – stress – assistance program – labor management - employee unions – labor legislation. Promotion, demotion, transfer and separation – employee grievances – redressal methods.

**TOTAL PERIODS      45**

**COURSE OUTCOMES**

At the end of the course the students would be able to

- identify the primary external influences affecting HRM
- outline the components and the goals of staffing, training and development
- understand the selection procedure in various organizations
- understand the practices used to retain the employees and able to evaluate their performance
- able to identify the stress and the cause of burn out

**COURSE OBJECTIVES**

To enable the students to

- understand the components of the social network
- model and visualize the social network
- mine the users in the social network
- understand the evolution of the social network
- mine the interest of the user

**UNIT I INTRODUCTION****9**

Introduction to Web - Limitations of current Web – Development of Semantic Web – Emergence of the Social Web – Statistical Properties of Social Networks -Network analysis - Development of Social Network Analysis - Key concepts and measures in network analysis - Discussion networks - **Blogs and online communities** - Web-based networks.

**UNIT II MODELING AND VISUALIZATION****9**

**Visualizing Online Social Networks**-A Taxonomy of Visualizations-Graph Representation-Centrality- Clustering - Node-Edge Diagrams - Visualizing Social Networks with Matrix-Based Representations- Node- Link Diagrams -Hybrid Representations-Modeling and aggregating social network data-Random Walks and their Applications – **Use of Hadoop and Map Reduce** - Ontological representation of social individuals and relationships

**UNIT III MINING COMMUNITIES****9**

Aggregating and reasoning with social network data, Advanced Representations - Extracting evolution of Web Community from a Series of Web Archive-Detecting Communities in Social Networks - Evaluating Communities -Core Methods for Community Detection & Mining - Applications of Community Mining Algorithms-Node Classification in Social Networks.

**UNIT IV EVOLUTION****9**

**Evolution in Social Networks** – Framework - Tracing Smoothly Evolving Communities - Models and Algorithms for Social Influence Analysis - Influence Related Statistics - Social Similarity and Influence – Influence Maximization in Viral Marketing - **Algorithms and Systems for Expert Location in Social Networks** – Expert Location without Graph Constraints - with Score Propagation–Expert Team Formation - Link Prediction in Social Networks - Feature based Link Prediction- Bayesian Probabilistic Models - Probabilistic Relational Models.

**UNIT V TEXT AND OPINION MINING****9**

Text Mining in Social Networks-Opinion extraction-Sentiment classification and clustering-Temporal sentiment analysis - Irony detection in opinion mining - **Wish analysis** - Product review mining- Review Classification– Tracking sentiments towards topics over time.

**TOTAL PERIODS 45**

## COURSE OUTCOMES

At the end of the course the students would be able to

- work on the internal components of the social network
- model and visualize the social network
- mine the behavior of the users in the social network
- predict the possible next outcome of the social network
- mine the opinion of the user
